## FOREWORD

AUERBACH Corporation was awarded a contract (Contract Number SD-219) by the Office of the Secretary of Defense to perform a comprehensive survey of the RDT&E personnel in the Department of Defense to determine how these individuals acquire and utilize technical and scientific information in the conduct of specific tasks associated with their work.

The study was conducted under the sponsorship of the Advanced Research Projects Agency, Office of the Secretary of Defense; administered under the direction of Mr. Fred A. Koether, Director, Technical Information, Advanced Research Projects Agency; and directed by Mr. Walter M. Carlson, Director of Technical Information, Office of the Director of Defense Research and Engineering, Department of Defense.

In addition to the AUERBACH staff utilized in performing this study, outside consultants were employed in specific areas. Dr. John de Cani, of the Statistics Department of the University of Pennsylvania, provided consultation in the statistical aspects of the study; Dr. Herbert Menzel from Columbia University provided inputs for the survey design; and Dr. Robert Sleight and Mr. Kenneth Cook of the Applied Psychology Corporation were consulted in the use of interviewing techniques.

The report is presented in two volumes. Volume I consists of three sections entitled: Management Report, Conduct of Study, and Analysis of Data, plus four appendices entitled: Study Execution, Discussion and Results of Survey Questions, Bibliography of User Studies, and Glossary. Volume II consists of three sections entitled: Interview Guide Handbook, Computer Program Documentation, and Statistical Tables.

### NOTE:

The detailed data collected, supplementary computer printouts, and the computer programs developed to compile and tabulate the data have been delivered to the Department of Defense. Persons interested in these items should contact:

Director of Technical Information  
Office of the Director of Defense Research  
and Engineering

SECTION IV. INTERVIEW GUIDE HANDBOOK

For the  
DOD Study to Determine  
How Scientific and Technical Information  
is Acquired and Used by  
RDT&E Personnel

CONTRACT SD-219

Sponsored by Director, Technical Information, DDR&E  
through the Advanced Research Projects Agency  
Washington D. C. 20301

May 8, 1964

Revised and Reprinted, May 14, 1965

## PREFACE

The material in this handbook was developed and compiled as part of an extensive training course for the staff conducting depth interviews of DoD research, development, test, and evaluation personnel. These interviews are part of a major study being conducted by AUERBACH Corporation to determine how information is used to carry out scientific and technical tasks within the Department of Defense. (The word "information" is used here in a generic sense, embracing both data and information.)

The basis for the study is recognition of the facts that the scientist/engineer user of a scientific and technical information system is an integral and primary part of the system and that his needs are neither broadly known nor well understood.

The first fact, that man is an integral and primary part of the system, stems from an overall systems-engineering view of how scientific and technical functions are conducted. These functions can be described as "production processes" in which information composes much or all of the basic raw material and the final product. Information flows into the process, is assimilated, updated, upgraded, added to, or translated into another, perhaps improved and more utilitarian, form. From this viewpoint, the scientist/engineer is an information processor. He acquires, manipulates, consumes, updates, improves and reports information. As both a producer and consumer of information he is by definition a primary element in an information system. The measure of information-system effectiveness is how well it serves the scientist/engineer's specific needs in terms of timeliness and utility.

As previously stated these needs are neither broadly known nor well understood, despite the fact that numerous scientific and technical use studies have been conducted and reported in the literature. While a majority of these studies appear to have been well conducted and have produced valuable information for specific purposes, they do not, individually nor collectively, provide sufficient general criteria for defining in depth the specific information needs of any broad segment of the technical community.

There are a number of reasons for this. A large number of the studies were conducted for narrowly specific purposes in unique environments. Many of them have been concerned only with scientists in a research atmosphere, usually in an experimental laboratory environment. Few studies have been concerned with engineers, particularly those with a product or administrative orientation. Most of the studies have concentrated on the users' information needs in terms of the types of packages they use, e.g., journal, rather than the information they need. Wide differences exist in the sampling, interviewing, and data-analysis techniques used, making correlation of results difficult or impossible. Many of the studies were not conducted with the degree of methodological sophistication available today — few included procedures for validation of system hypotheses that are essential to sound systems-engineering design.

Consequently, few of the studies provide a reliable base for extrapolation to general conclusions about the information needs of a broad segment of the technical community. The study for which this handbook was developed is an attempt to provide the base and general criteria needed for this kind of extrapolation.

The community being studied consists of 36,000 military and civilian scientists and engineers performing a broad range of scientific and engineering activities. This population provides the basis for a soundly-structured study in which uniform and current techniques for sampling, interviewing, and data analysis can be used to scientifically examine the information needs of different types of scientists, engineers, and technical administrators.

This study effort is expected to produce pertinent information on what kind of information the scientist/engineer uses, in what form he uses it, where he obtains it, and what kind of decisions he makes with it. Further it should produce better insight into a number of important systems-design questions, such as how should the information be packaged, from what locations and by what means should it be transmitted, and how up-to-date and how well correlated the material must be for effective use.

## 1. PURPOSE OF THE STUDY

One of the principal tasks of the Department of Defense is research and development leading to the production of particular weapons systems. These research and development (R&D) efforts involve searching for and utilizing astronomical amounts of scientific information. It has been estimated that scientific knowledge is doubling every ten years. As a result, increasing amounts of research and development effort are wasted in searching through these growing mountains of information.

The problem, therefore, is to channel the pertinent information to interested personnel as efficiently as possible. But, in order to devise a system for more efficient delivery of this information, there must be insight into the information use patterns of these personnel. The aim of this study is to provide that insight, that is, to determine how Department of Defense scientists and engineers obtain and use scientific and technical information. For this study, the AUERBACH Corporation has developed an interview guide for use in interviewing approximately 1,500 personnel randomly selected from the DOD Research, Development, Test and Evaluation (RDT&E) population. The interviews will average about two hours in duration and will be semi-structured in nature.

Data from the interview will be recorded on the interview guide in both quantitative and narrative form. The quantitative information will be punched on cards and entered into electronic data processing equipment. With this tool, AUERBACH and DOD information specialists will search the quantitative data for significant patterns of information acquisition and usage, for each segment of the RDT&E population. Invaluable supplementary information from the narrative comments will clarify the meaning of the quantitative information and reveal new patterns that could not be recorded in the more rigidly structured quantitative portion of the guide.

## 2. A MODEL OF THE ACQUISITION OF SCIENTIFIC AND TECHNICAL INFORMATION

In order to put the survey of "How Scientists and Engineers Acquire and Utilize Information" on a firm footing, a number of definitions and assumptions have been made. These definitions and assumptions have, in turn, been based on a conceptual model of certain phases of scientific and technical processes.

### 2.1 RDT&E Processing

Each DOD person, who may be classified as a research, development, testing or evaluation person, is embedded in a constant flow of information. Furthermore, his work covers a wide variety of activities. The following ideas concerning the activities of these persons and the information flowing to these people are basic to the assumed model.

2.1.1 Tasks. The work performed by an RDT&E person can be divided into two parts. One part consists of a series of specific "tasks"; the other part consists of activities which may indirectly benefit the task processing or the man's professional abilities but are not specifically a part of the effort of a task.

In this sense a task may be defined as a series of processes performed by the person (usually in his head, but often with the assistance of laboratory equipment or scratch paper, etc.) which leads to some conclusion. In general the conclusions of a task bear upon larger projects or studies being carried out for the benefit of the Department of Defense. Many tasks start by recognition of a number of technical alternatives (perhaps not clearly defined) and end by narrowing the number of alternatives to be considered in some subsequent task (or upon which action will be taken). Tasks may be part-time or full-time and may or may not be continuous in time.

Figure 1 summarizes these ideas. The task-related technical processing is envisioned as a process undertaken by a scientific or technical person which involves scientific and technical inputs, and other inputs, and results in conclusions or outputs contributing to the technical activities of DOD. Table 1 is a list of possible typical task conclusions.

TABLE 1.  
TYPICAL TASK CONCLUSIONS

Recommendation  
Finding  
Answer  
Conclusion  
Result  
Request for Action or Further Study  
Order for Action or Further Study  
Determination  
Specification  
Design Parameter Selection  
Decision  
Termination of an Effort

A task starts with some recognition (possibly vague) of a need to reach a conclusion or to produce some output. During the task the person recognizes a need for information and searches for or requests searches for the information. This information will be referred to as "chunks" of information. During the processing of this task the person receives information both as a result of specific requests and "accidentally." Finally, after his analysis, study, or decision process is completed, a conclusion is reached.

**2.1.2 Task-Related Information Flow.** It is assumed that the information flowing to an RDT&E person can also be divided into two parts. One part bears specifically on tasks he is performing; the other part is used to maintain an awareness of the current state of technical areas of interest, to educate himself, to brush up on previously known areas, and to stimulate his thinking.

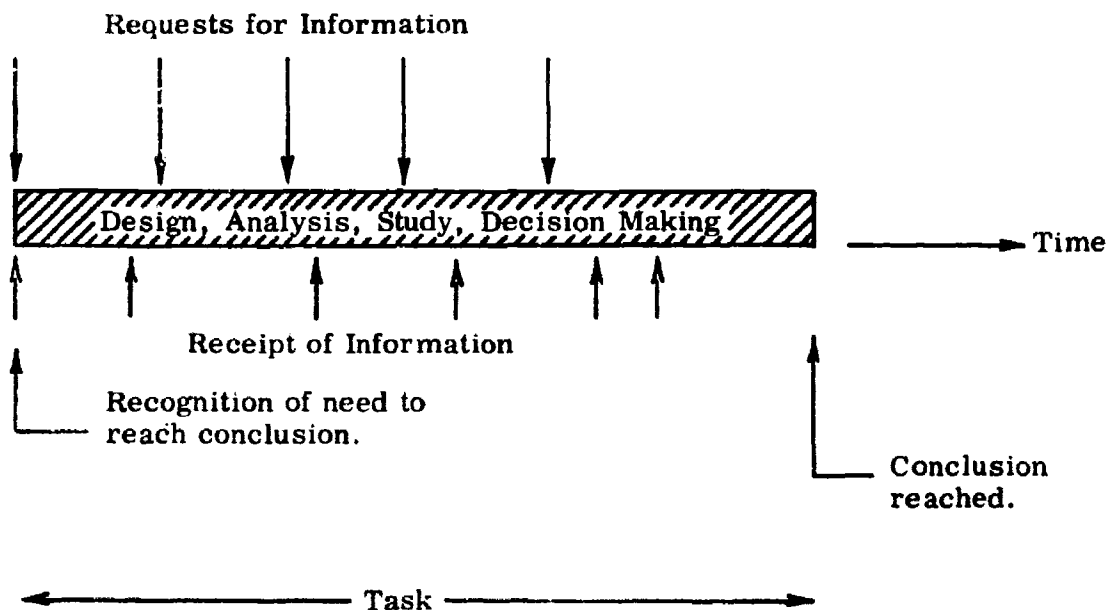

Figure 1. RDT&E Processing

Figure 2 illustrates these two flows. The current awareness flow (in the broad sense described above) emanates from general information sources, which include oral as well as written transfers. The person accepts and observes some of this material. He may remember, in his head, some of the information or references to information. He may extract some of the information or references from the flow of current awareness to put in a personal store.

When the person recognizes the need to reach a conclusion (that is, to initiate a task), additional information flows are incurred (illustrated in Figure 2). First a certain amount of information may be presented to the person along with the task assignment; however, some tasks are self-generated. Next, the person may remember a portion — often all — of the information required to perform the task or he may remember references to appropriate information. He may turn to his personal store and either directly or by searching find information or references.

Finally, he may initiate searches into the general information sources for information required to perform his task. These information sources include his own library, laboratory, conversations with colleagues, etc., as well as formal information centers.

In addition, the RDT&E person may extract from the flow of current awareness information, specific information which he then uses in the then ongoing task. We say that this is information "accidentally" encountered, but it is still defined as task-related.

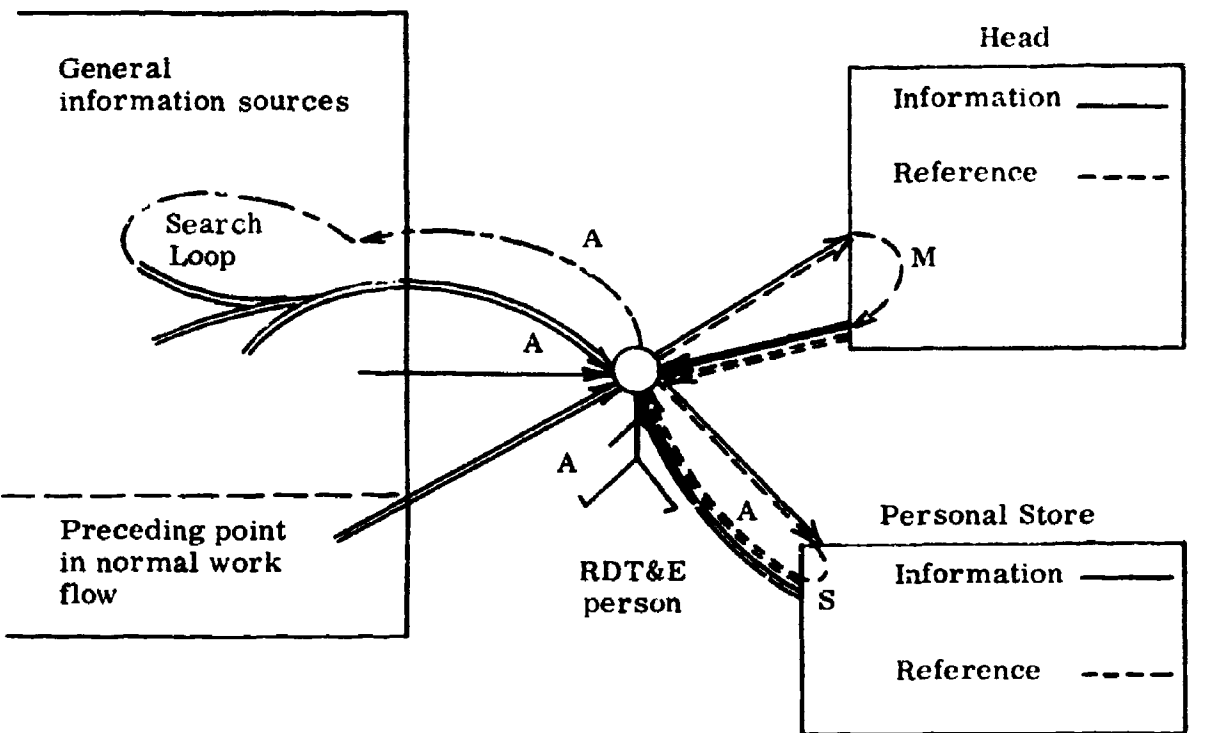

## 2.2 Objectives of This Study

In the principal part of this study we are concentrating on the information wanted and used to perform specific tasks, as just described. We are not directly concerned with the flow of current awareness information nor with the indirect transfer between the current awareness and task-related needs.

To study this transfer, as illustrated by M in Figure 2, one would have to depend upon a person's remembering the relationship between information or references he uses for a specific task and the way in which he discovered that information from the current awareness flow. People remember that they found information and can use it, but do not remember where or when they learned the piece of information.

Therefore, the study concentrates on identifying the information used by the person in performing a specific task. It also concentrates on trying to obtain an estimate of the information which the man felt he wanted to perform the task, even though some of the "wants" were not fulfilled. A number of questions are then asked about each chunk of information required to perform the task, other than those recovered from his head. This last limitation is made since people do not usually distinguish between chunks of information recovered mentally and the process of analysis and decision-making itself. Furthermore, the basic purpose of this study is to concentrate on the externally-supplied information required to perform tasks.

(Separate interviews may be undertaken in the future to analyze the current awareness flow and certain aspects of the transfer between current awareness flow and task-related information inputs.)

———— Current Awareness, Education, Brush-up, Stimulation, etc. Flow

===== Task Related Flow

- - - - Search Requests

A: flows studied in detail on this project.

M: depends upon memory.

S: search in personal store.

Figure 2. Information Flow Model

### **2.3      Information Chunks**

Having identified a task, it is next desirable to identify the chunks of information which are required to perform the task. A chunk of information is not related to a medium or method of transmission of information, but refers truly to "information." For example, the boiling point of water is a piece of information, whether found in a handbook, in a text-book, or by asking a colleague. Some chunks of information, such as "the state of the art in underwater propulsion," must be discovered by compilation from a number of physical sources, including journal articles, technical reports, and presentations, etc. Yet all this information would be called one chunk of information.

### **2.4      Sampling Procedure**

Obviously the ultimate goal is to sample a number of tasks performed by DOD and to analyze the information needs for them. One would then extrapolate from the sample to the entire population of DOD tasks being performed. The tasks obviously must be studied through the media of the persons performing them and basically, therefore, a sample of RDT&E people is involved.

## **3.      HOW TO SET UP APPOINTMENTS**

### **3.1      General**

To establish an appointment with a respondent, proceed through the following steps:

- (1) After receiving the respondent's name and address, send out the DOD news release, and the letters (Appendix A) requesting an interview.
- (2) Call respondent two or three days prior to the interview. Introduce yourself and ask if the respondent received the letter. Arrange for a specific time during the specified day. If the respondent is absolutely unable to schedule an interview during that day, keep after him. When discussing the necessity for the interview with a reluctant or antagonistic respondent, be pleasant but firm.
- (3) If major difficulty is encountered in scheduling an interview and the interviewer is certain he cannot overcome the obstacles, call the project engineer.

### **3.2      Interview Substitutions**

Under no conditions will you ever select a substitute for an unavailable respondent. Substitutes will be named only by the Project Engineer. If it is a matter of the respondent not being available on a particular day, it is up to you to arrange a later date. Substitutions should be requested only in cases where interviews are impossible at a reasonable, future date.

#### 4. METHOD OF CONDUCTING THE INTERVIEW

##### 4.1 General

- (1) Interview at the respondent's work station unless his supervisor or subordinates are too near: in this case, use a conference room, but return to the work station when feasible for a check of any information he mentioned using and indicated was stored there.
- (2) Adhere as closely as possible to the standard introduction.
- (3) Use a friendly approach to relax the respondent and produce more information. (However, in difficult cases remember that you have a right to be there.)
- (4) Try not to put words into the respondent's mouth. If you know anything about the respondent's field, conceal it; otherwise, you might unconsciously lead the respondent to shade his answers or skip important comments.
- (5) Do not rush. In some rare cases, it may be necessary to return for a supplementary interview.
- (6) Try not to reveal any appraisal of the respondent, his job, or his performance. The respondent may react to the image of himself which he believes you possess.
- (7) Try to learn standard abbreviations and code names, such as PL 313, ASW, DD 613, ECM, etc., but do not hesitate to ask the meaning of any that you do not know.
- (8) If the respondent requests some detailed information from you, e.g., about the survey, diplomatically ask him to wait until the conclusion of the interview. The information might affect his answers.
- (9) Listen for the respondent's use of the words "we" and "usually." The interview guide is aimed at the personal information patterns of the respondent, not his organization. Therefore, be careful when he lapses into use of "we," meaning his organization. He may also lapse into generalizations signaled by frequent use of "usually" or "generally;" make certain he is speaking about the specific task or information chunk.

- (10) Retain control of the interview. Do not let the respondent wander from the immediate question unless specifically useful information is obtained. Avoid his usual tendency to expound at length on what his organization is doing.
- (11) Make sure that the only persons present during the interview are the interviewer and respondent; all others including the respondent's supervisor and colleagues are to be excluded.
- (12) Avoid all exposure to classified information, even if the respondent should offer it.
- (13) Do not be overly concerned when it is not possible to obtain the details of a classified task or information "chunk." Determine only the field and general nature of these items. If the task is completely classified, refer to it as TASK "X."

#### 4.2 Introductory Speech

Good Morning (Afternoon). My name is \_\_\_\_\_. You will recall that I contacted you earlier by phone (letter) requesting this interview which you confirmed. I certainly appreciate your cooperation.

(If you can find a pretext, discuss some neutral subject such as: facilities, location, weather, have coffee, etc. After man appears to relax — but don't wait too long — go on.)

My purpose in visiting you is part of a survey to investigate the utilization of scientific and technical information within the Department of Defense. We are doing this for the Director of Defense Research and Engineering and perhaps these letters will make clear our purpose. (Show the respondent the letter from Koether with associated memo. Do not assume, however, that he has absorbed what he has read.)

As you probably know, Mr. \_\_\_\_\_, there has been considerable concern in the past few years about how information is gathered and disseminated throughout the Department of Defense, and how inadequacies in this dissemination system are affecting the overall efficiency of DOD's activities. Before drastic steps are taken to revise the information system, DDR&E felt it wise to try to understand more exactly how scientists acquire and utilize technical (scientific, if a scientist) information. The principal method for analyzing the need and use for scientific and technical information is this survey. I am with the AUERBACH Corporation, which as you have read in the letters, has a contract to execute this survey and help in analyzing the results. AUERBACH Corporation is a consulting firm in the information and computer field.

The results of the survey will be used to guide future efforts to design better information systems. We hope the result will be to channel to people such as yourself the proper technical information more rapidly and effectively. A report on the survey results is due about the end of the year.

As you realize, the acquisition and utilization of information by a scientist (engineer) is a complex and highly personal process. We know that surveying and studying this process is difficult. However, with your cooperation, I think we can get at information that will be useful in improving information flow. To do this, we are first going to determine what information you needed to perform a specific task, and then we would like to have your comments on your usual problems in obtaining technical information.

There are about 35,000 research, development, test and evaluation personnel in the DOD community. We have selected about 1,500 of these on a purely random basis, and it was in this way that your name was chosen. We are, of course, in no way attempting to evaluate you or your job. As you will see, we are principally interested in determining the kinds of information you need to perform specific tasks. As Mr. Brown's memo indicates, we will not record your name on our survey form at any point.

Before we begin to discuss your job, let me give you a quick idea of the sequence of the interview. First, I would like to discuss this (his) organization and your job within it. Second, I would like to focus upon a recent task or study which you have accomplished. Perhaps we will be able to identify this task by identifying a particular output which you have produced within the past few weeks. An output may be a paper, a presentation, a report, even a telephone call of significance. The interview will then continue by discussing the technical information you needed to accomplish this task. Third, we will ask a few questions about your use of government information and data centers. Fourth, and last, I will ask generally what difficulties you usually encounter when looking for scientific or technical information.

(Pause to see if the respondent has any question.)

So, let's start by reviewing the function of this organization (name his organization, if you know it).

(Guide the conversation into what the respondent does. Do not continue too long on a discussion of the organization before you direct him to discuss his own job and its outputs.)

As soon as the last completed output is identified, start on the questions.

#### 4.3 Structure of Interview Guide

The attached interview guide consists of five basic parts: (I) respondent profile; (II) analysis of information concerning a recently completed task; (III) utilization of Defense Documentation Center (DDC) and specialized DOD information and data centers; (IV) difficulties usually encountered in obtaining technical information; (V) subjective comments of the interviewer; (VI) evaluation of task and task output. A more detailed breakdown of the guide would be:

- I. Respondent Profile (questions 1 - 11)
  - A. Personal data (questions 1 - 8)
  - B. General job description (transition questions 9 - 11)

- II. Analysis of Task Information (questions 12 - 48 and 93, 94 and 95)
  - A. Isolate the task (question 12)
  - B. Task data (questions 12 - 23, and 93, 94 and 95)
  - C. Isolate the task information chunks (question 24)
  - D. Chunk data (questions 25 - 47)
- III. Utilization of Information Centers (questions 49 - 53)
  - A. Use of TAB and DDC (questions 49 - 51)
  - B. Use of specialized information and data centers (questions 52 and 53)
- IV. General Information Patterns: Difficulties usually encountered in obtaining technical information (questions 56 - 58)
- V. Subjective Comments of Interviewer
- VI. Subjective Evaluation of Task and Task Output

As previously mentioned, the objective of the interview guide is to sample RDT&E tasks and to determine the types of information needed, not the types and numbers of media (e.g., journals, texts) required.

#### 4.4 Utilization of the Interview Guide

For proper use of the guide, it is necessary to define five terms around which the guide was designed: (1) project, (2) task, (3) chunk, (4) source, and (5) scientific or technical information. Although some of these terms have been discussed earlier, additional examples and descriptions of their interrelationships are necessary.

The word "project," is never mentioned in the guide but it almost always crops up during the interview. The project is usually a long term job of many months or years duration, and it usually involves the direct full-time efforts of more than one person. Examples are: development of a radar dome (protective cover for radar antenna); determination of the X-ray radiation from the sun; development of the complete specifications for a counter-insurgency aircraft. The larger projects can usually be easily identified because they are funded by their names. Projects are made up of "tasks."

The respondent will have completed many tasks; however, the particular one of interest to the interviewer is the most recently completed task that meets the following additional three criteria:

- (1) It required a total of at least eight full hours of the respondent's efforts.
- (2) It involved technical considerations.

- (3) It has a tangible, clearly identifiable output such as a technical report or an oral briefing.

Usually, the duration of a task will not be over six months. Examples of a task are:

- (1) Determine which of five likely plastics would satisfy the wind resistance requirements of a radar dome.
- (2) Select the correct type of transistor to be used as a sense amplifier in a computer memory.

Tasks require one or more segments of information called "chunks." A chunk is a limited amount of information; for example, one chunk might be the manufacturer's recommendations on how to bond five likely plastics to a simulated radome skeleton; a very small chunk would be the breakdown voltage of an insulator; a large chunk would be the complete data on fallout from firing NIKE "X" anti-missile missiles. The term "chunk" does not in any way refer to the type or quantity of information packages, i.e., media, to be used; it does not indicate whether the information came from one journal or from 50 texts. The name of the chunk simply describes the type of information, not the means of transmitting it.

The "source" is the person or organization which furnished the chunk to the respondent. Just as there may be many tasks to a project, and many chunks for a task, so there may be many sources for a chunk. An example of one source would be a manufacturer's representative who orally indicates how the plastic sheets should be bonded to the radome skeleton. Rarely would media (e.g., journal, text) be considered a source unless there is no obvious person or organization who furnished the media.

A fifth term, "scientific or technical information," is also a key phrase in this study. Scientific or technical information refers to non-administrative knowledge or data used to accomplish a task in engineering, science, or in the technical utilization of an object. Scientific or technical information includes overviews as well as detailed information used in research, design, development, testing, evaluation, or other technical tasks. It does not include cost or funding information unless that information relates closely to a scientific or technical effort. For the sake of brevity, scientific or technical information is frequently referred to in this study as "technical information."

There are some general observations and recommendations concerning the use of the guide:

- (1) There are three types of guide questions:
  - (a) Questions to guide the discussion; these have no blanks or blocks to fill.
  - (b) Questions with narrative blanks.
  - (c) Questions with narrative blanks, and blocks to be filled with numbers.

- (2) No more than one letter or number should be entered in any block. If several choices seem to fit the situation, choose the best and enter it. If none of the multiple choices seems to fit, either leave the block empty and explain the omission in the narrative blanks below the question, or enter the choice that fits best. Qualify any special cases by remarks in the narrative blanks.
- (3) The narrative blanks are also to be used to indicate new or novel insight that would not normally be brought out by the guide's questions. The narrative blanks, however, are not for recording running commentary; the entries should be only for concise notes or answers.
- (4) Since the task is the nucleus of the study, it is imperative for the interviewer to determine the names of all the information chunks pertinent to the task even though he may not have time to investigate all these chunks in detail.
- (5) Once the information chunks have been identified, the chunk details should be investigated sequentially, not in parallel. This means, for example, the interviewer must first ask questions 25 to 47 for Chunk I; he then repeats these same questions for each of the following chunks.
- (6) The reverse side of the guide pages is filled with lines for informal note taking. In general, the information recorded on the reverse side will not be analyzed by anyone other than the interviewer. This lined side is a scratch pad for his convenience. It permits the interviewer to record noteworthy comments while the respondent relates them. After the interview is concluded, the interviewer reviews these notes for significant points, which are then condensed and recorded in alpha, numeric, or narrative form on the question side of the sheet. Much of the time the interviewer should be able to fill a block immediately after he asks the corresponding question. On the other hand, formal narratives are often entered on the question side of the sheet only after analysis of the informal notes on the reverse side.

#### 4.5 Introductory Guide Data

At the top of page 1 of the interview guide, make certain that the "date of the interview" is always in the sequence of month, day, and year.

The "Name of Facility and Location of Interview" is the installation and the nearest city.

#### 4.6 Part I — Respondent Profile

The "Mil/GS Rating" blank (Question 1) asks for the military rank (e.g., Lt. Colonel) or civilian rank (e.g., GS-15) held by the respondent.

The "Number Technical Personnel Supervised at Present" blank (Question 3) is the number of technical semi-professionals (e.g., technicians but not handymen) and professionals (e.g., scientists and engineers) who report immediately to the respondent. This is the exact number supervised at present, not the average over a period of time. If the respondent has a staff position and has no one reporting to him, the blank would contain a zero. In this particular case, be extremely careful not to embarrass the respondent by accenting the fact he has no one reporting to him.

The "Highest Degree and Field" blank (Question 4) is the degree officially held by the respondent and the area of the degree (e.g., B.S. in electrical engineering). Even if the respondent is within very short striking distance of a higher degree, disregard it and list only the degree he actually has; however, be tactful in determining this fact.

The "Job Title" blank (Question 6) is the formal word name of the respondent's position (e.g., Chief, Steam Propulsion Branch), as carried on the official DOD organization chart.

"MOS or Job Code" blank (Question 7) is the military or civil service number code for the respondent's primary job. Frequently this will be a number in the 800 or 1300 series. Do not confuse this military or civil service number code with the office or mail code.

In answering Question 8, the respondent is to indicate how long he has been working in his present technical area (e.g., described by his DDC field and section.) It is oriented toward the types of projects on which he has worked recently; e.g., the design of ordnance fuzes. This question does not relate to the time he has spent at a given management or engineering level.

Since Questions 1 through 8 are of a personal nature, it is best to ask them near the end of the interview after rapport has been established.

Usually, the interview starts with Questions 9 through 11. These are to be answered by the respondent's informal oral description of his job. An abbreviated narrative version of this description is entered at the bottom of page one. The letters A, B, or C for Question 9 each indicate a particular type of respondent activity. The appropriate letter is entered in the number 9 block at the right. The activities are one way of describing his job in general, and are defined below:

#### TYPE OF ACTIVITY

- A. Detailed Scientific or Engineering — requires in-depth technical expertise in a particular area(s) of research, development, test, and evaluation. Technical capability which requires more than just an overview or moderately detailed knowledge of a scientific or engineering area.

- B. Technical Evaluation — requires at least a moderately detailed knowledge of an area, for judging the merits and weaknesses of a project, plan, or proposal. Does not include individuals engaged primarily in design or research who evaluate projects, plans, or proposals only occasionally. Includes individuals engaged almost full time in monitoring contractor progress (e. g., project officer) or evaluating proposals.
- C. Technical Administration — where 90 percent or more of the work day is spent on work involving no technical considerations. Some small portion of the work day — up to 10 percent — does require some technical knowledge, often no deeper than an overview.

If, in answer to question 9, the respondent indicates he is a full time administrator requiring no technical knowledge at all, the interviewer should classify him as "Other," i. e., "D," and elaborate in the narrative section at the bottom of the page. The interviewer must double check and be certain, however, when such a case occurs. Seldom is no technical knowledge required.

Question 10, "KIND," provides the interviewer with a second way to describe the respondent's job in general. Choices A through E are based on the DOD "Hitch method" of defining scientific and technical areas. The description of each of the seven "Kinds" is given below. The letter for the appropriate kind is entered in the number 10 box at the right. If the respondent holds positions in two or more of these "KIND" classifications, always analyze only his primary job.

#### KIND

- A. Research — Includes all effort directed toward increased knowledge of natural phenomena and environment and efforts directed toward the solution of problems in the physical, behavioral, and social sciences that have no clear, direct military application. It would, thus, by definition, include all basic research and, in addition, that applied research directed toward the expansion of knowledge in various scientific areas. It does not include efforts to prove the feasibility of solutions to problems of immediate military importance or time-oriented investigations and developments.
- B. Exploratory Development — Includes all effort directed toward the solution of specific military problems, short of major development projects. This type of effort may vary from fairly fundamental applied research to quite sophisticated bread-board hardware, study, programming, and planning efforts. It would thus include studies, investigations, and minor development effort. The dominant characteristic of this category of effort is that it may be pointed toward specific military problem areas with a view toward developing and evaluating the feasibility and practicability of proposed solutions and determining their parameters.

- C. Advanced Developments — Includes all projects which have moved into the development of hardware for experimental or operational test. It is characterized by line item projects, and program control is exercised on a project basis. A further descriptive characteristic lies in the design of such items being directed toward hardware for test or experimentation as opposed to items designed and engineered for eventual Service use. Examples are testbeds such as: an experimental Hydrofoil and the X-15.
- D. Engineering Developments — Includes those development programs being engineered for Service use but which have not yet been approved for procurement or operation. For example: MAULER, TYPHON, B-70. This area is characterized by major line item projects.
- E. Operational System Developments — Includes research and development effort directed toward development, engineering and test of systems, support programs, vehicles, and weapons that have been approved for production and Service employment. This area is included for convenience in considering all RDT&E projects. All items in this area are major line item projects which appear as RDT&E Costs of Weapons Systems Elements in other Programs.
- F. Reliability-Quality Control — Includes maintaining the quality of a product by using mechanical and mathematical sampling and measuring techniques.
- G. R&D Support — Includes research and development effort toward support of installations or operations required for general research and development use. Included would be test ranges, and maintenance of test aircraft and ships. Military Construction costs directly related to a major development program will be included in the appropriate element. Examples of Research and Development Support are: calibration of nozzles used in a wind tunnel; the design of a piece of general test equipment such as a chronograph that is to be used by laboratory personnel, not by field forces, to measure the speed of an artillery shell.

Question 11 allows the interviewer to describe the respondent's general job in terms of a DDC (ASTIA) field. The most appropriate of 33 possible fields (e.g., Chemistry Guided Missiles, etc.) is chosen from the DDC Distribution Guide Reprint, March 1964.

#### 4.7 Part II — Analysis of Task Information

Part II is the heart of the interview. It selects the most recently completed task and analyzes the "chunks" of information inputs which were necessary for performing that task.

**4.7.1 Isolating and Describing the Task.** The chief problem of the interviewer in Part II is selection of the task, a function which he must not leave to the respondent. The interviewer always selects the most recently completed task which meets the following three criteria:

- (1) It must involve technical considerations. A valid task, however, may not have a technical output; for example, the case of developing a budget requiring technical knowledge of the project(s) involved, but resulting in no technical output. On the other hand, the mere mechanics of writing a technical report is not a suitable task because no analysis or manipulation of technical information is required.
- (2) It must have consumed at least eight man-hours of the respondent's work effort. These eight hours may have been spread over a long period of time.
- (3) It must have a clearly identifiable, tangible output; oral outputs are acceptable.

The strategy in Part II is to ask a series of three basic questions which, first, discover the respondent's latest activities, second, discover his most recently completed task, and, third, verify that this task was his most recently completed one. These three questions form a skeletal structure for other detailed questions framed on-the-spot by the interviewer.

Specifically, the suggested procedure for isolating the task follows this sequence:

- (1) Ask the first basic question, "Briefly, could you tell me what you have been doing in the last few days?" The purpose of this question is to give the interviewer a good opportunity to identify the proper task before he formally asks the respondent to name it. This minimizes the possibility that the interviewer will feel obligated to use the task chosen by the respondent even though he, the interviewer, doubts the wisdom of the choice. After the respondent begins discussing his present activities, the interviewer works back in time from the present, until he thinks he has a task. During this discussion, the interviewer attempts to isolate the task by informally asking probing questions to determine if the potential task: is the most recently completed which: (a) involved technical considerations, (b) required eight hours of the respondent's effort, and (c) has a tangible, i. e., identifiable output.
- (2) After the interviewer believes he has the task isolated, he confirms it by asking the second basic question, "What is the most recent task you completed?" This requires giving the respondent a brief definition of "task" by simply listing the task criteria. If necessary, the interviewer

should emphasize that the task is not to be necessarily representative of the respondent's usual tasks. After the respondent has named the task, the interviewer asks for a very brief description of it and determines that it is only a task and not a sizable project.

- (3) Ask the third basic question, "Since you finished this task, what have you been doing?" The question is a check to verify that no acceptable task has been completed after the one already selected.

A task may have several outputs. Once the task has been selected, it is very important to determine the major output. The term "major" means the output requiring the most preparation effort on the part of the respondent. Identifying the major output of the task is essential before proceeding with the balance of the interview, especially question 14, and questions 19 through 23. This major output of the task is to be considered as part of the overall task and, therefore, must have been completed as required by one of the task criteria previously outlined.

Questions 12 and 13 require recording the number of the DDC (ASTIA) task field and the section, using as reference the DDC Distribution Guide Reprint, March 1964.

Question 14 asks for the "KIND" of major output from the task. Although Questions 14 and 10 have the same list of choices, the choice selected in Question 14 may be considerably different from the choice describing the respondent's general job in Question 10 on page one. For example, an astronomer may be listed as engaged in "research" on page one; however, his most recent task may have consisted of developing a device to assist him in this basic research. Therefore, the "kind" of task would be "R&D Support," choice G. For the definitions of the "KIND" choices in Question 14, refer to the list described earlier for Question 10.

Questions 15 and 16 determine if the task was assigned to the respondent by someone else, if the respondent himself generated the task, or if it was a joint decision arrived at by the respondent and someone else. This query was broken into two questions in order to avoid directly contrasting the choices of "assigning" and "self-generated." This direct contrast might imply that the respondent who generated his own task was superior to the respondent who did not. Descriptions of the key terms in these questions are given below:

Assigned — Where a superior specifically gives to the respondent the responsibility for completing this particular task.

Self Generated — Where the respondent is primarily responsible for the decision to carry out this task. "Self-generated" also includes tasks that automatically arise as a normal part of the respondent's general duties, or as a consequence of a broad directive by the respondent's superior. For example, suppose the respondent's supervisor tells the respondent to find some means of increasing the range of a

rocket; assume also the respondent decides to undertake a task which determines if aluminum grain additives to the solid propellant will give added thrust to obtain the desired increase in range. The task of testing aluminum additives would be "Self-Generated" because the respondent's supervisor did not specifically indicate that aluminum additives were to be investigated.

**Joint** — Where the decision to undertake a task is arrived at by the mutual agreement of the respondent and his superior or by the respondent and one or more colleagues.

Question 17 actually consists of two questions which determine the duration of the task in number of days, weeks, or months. The first question establishes when the task was assigned or decided upon by the respondent. The second question determines when the task output was completed. The answers in month, day, and year are recorded in the empty area immediately to the right of the questions. This empty area serves as a scratch pad for computing the duration which is entered in the two blocks at the extreme right of the questions. The right hand block is for the letter indicating the units of time: day, week, or month. The letter code to be entered in these blocks is any one of the following three:

D — for days

W — for weeks

M — for months

The number of days, weeks, or months' duration is entered in the left hand block. For example, a task lasting five weeks would be recorded as:

5 / W

Question 18 determines what percentage of the respondent's own eight hour work day was spent working on the task during the period indicated in Question 17. If the respondent should phrase his answer in terms of hours, it is up to the interviewer to translate this into a percentage.

Question 19 asks for more detail on the physical form of the task's major output. The answer is to be a brief, one line description; for example, "a five page technical report," "a series of twelve detailed design drawings," or "a formal oral briefing."

Question 20 asks if the purpose of the task's major output was a finding, recommendation, or decision. These three choices are described as:

**Finding** — a simple recording of the facts discovered in an investigation, with no specific recommendation to act on any of the alternatives presented. For example, one

finding determined that there are two feasible methods for generating electricity to power a particular communications satellite; these methods are thermoelectric and thermonuclear.

**Recommendation** — a suggestion to follow one of a number of alternatives. An example would be a respondent's advice to use the thermonuclear source of electricity for the satellite.

**Decision** — a conclusion to take action or not take action on a recommendation from others or on findings generated, and deliberated over, by the respondent himself. An example of a decision is the conclusion to order immediate development of a thermonuclear generator.

The interviewer should be careful not to offend the respondent by implying the respondent made only a "recommendation" while the respondent insists it was a "decision."

Question 21 determines if the principal form of the major output was oral or written. Since virtually all tasks involve at least some minor oral communication of the output, the emphasis in this question is on the principal form. Examples of oral task outputs are an informal briefing by a superior or a formal address before a professional society. Examples of written task outputs are a lengthy formal letter, a technical report, or a journal article.

Question 22 determines if the form of the task's major output was formal or informal. Formal outputs are highly structured and require appreciable time to prepare; examples are:

- (1) technical reports,
- (2) well planned briefings or addresses before large groups of people,
- (3) lengthy, organized memoranda or correspondence.

There are usually no preparatory efforts to rigidly structure or outline the informal outputs. Examples of informal outputs are:

- (1) a telephone conversation to convey a recent finding,
- (2) a one paragraph, handwritten note to a colleague indicating a decision to build the prototype of a collapsible fuel storage cell.

Question 23 determines if the output was directed to circles within the DOD community, or outside DOD. The DOD community includes all government organizations under the direct control of the Secretary of Defense. The term, "outside DOD" refers to all

governmental and private groups not under the line supervision of the Defense Secretary. The objective of Question 23 is to learn if the chief audience toward which the output is directed — and not necessarily the first person who officially receives the output — is inside or outside the DOD complex.

**4.7.2 Analysis of the Information Chunks.** Once the task has been isolated and discussed, the next step is to determine what "chunks" or segments of scientific or technical information were needed to perform the task. It must be emphasized that the "chunk" is a description of the type and quantity of information, and not the physical package or media (textbook, journal, etc.) in which the information comes. A particular chunk, regardless of its type, size or complexity, may come in one or in a thousand varied media. The chunk and media have no direct relationship. Examples of chunks of information are:

- (1) the availability of large quantities of five different strategic materials for use in jet turbine blades,
- (2) the characteristics of an aluminum alloy at temperatures above 300 degrees F., or
- (3) fuel consumption curves for an Army truck.

Question 24 introduces the request for chunks. The five unnumbered questions that follow simply serve as "memory joggers" to insure that the respondent recalls every information chunk used in the task. The specific responses to these unnumbered questions are never recorded — only the chunks of information they reveal. We are not really interested in which chunks came with the task, which were obtained informally, or which were wanted at the beginning of the task, but were not obtained by the end of the task; some of this information is obtained by later questions, but it is not a consideration for Question 24.

As the chunks are listed, the interviewer writes them on the worksheet area of the page facing the question sheet. When the total list of the chunks is established, the interviewer asks the respondent to rank them in order of importance; the Roman numeral system is used for the ranking. The final list of chunks may be entered under Question 24 after conclusion of the interview. The interviewer must keep a close eye on the clock. He should analyze about three chunks in detail at first, pass on to Parts III and IV, and then return to analyze more chunks if he has the time available. In any event he should be able to analyze at least three chunks.

Question 25 determines the class, DDC (ASTIA) field, and DDC section (sub-field) of each information chunk. The definitions of each class follow. The letter for no more than one class is to be entered in the appropriate one of five chunk blocks at the right of the sheet. If the chunk appears to contain more than one class, pick the predominant class and enter that letter in the block. The same rule for no more than one entry is carried through the remainder of the entire interview guide. If the interviewer cannot resolve this problem of multiple choices, he should either mark the letter for "other" or leave the block empty. In either case, he should explain why in the lined area below the question.

## CLASSES OF INFORMATION CHUNKS

(Question 25)

Concepts — theories, ideas, broad technical plans, or general relationships. For example, the plan for lunar orbit of manned spacecraft preparing to ascend to the moon, or the theory of relativity.

Cost and Funding — the allocation or expenditure of money in support of a technical effort. For example, budget data for the coming fiscal year, or for the development of a new land mine.

Design Techniques — detailed approaches or procedures employed in combining ideas, and the techniques of converting these combinations into plans and models.

Experimental Process or Procedure — the method, or sequence of events followed in preparing and performing an investigation where the results are predicted theoretically, and not with absolute certainty. Experimental processes and procedures may either be generally established ways of setting up or conducting experiments, or they may be one-of-a-kind. An example is the procedure for conducting a wind tunnel experiment to determine the drag on a model of a new supersonic aircraft configuration.

Math Aids and Formulae — theorems, equations, or formulae considered as standard information by accepted authorities, and used as tools in calculations. For example, the formula for the area of a circle, a constant such as  $\pi$ , fixed tables such as logarithms, or Ohm's law of  $E = IR$ .

Performance and Characteristics — observed data or qualities of an object in terms of what it is or how well it performs. Examples are: "high wing monoplane," "a measured speed of 825 knots." Performance and characteristics indicate the actual nature or capability of an object, not the design objectives of the object (i. e., not specifications).

Production Process or Procedures — the method or sequence of events involved in the duplication of an object.

Raw Data — unprocessed and uncorrected data which are the primary record of a scientific or technical measurement or event. For example, a graphical record of telemetry data exactly as it appeared when it was radioed from a rocket; a high speed photograph of the shock waves produced by a projectile.

Specifications -- primarily quantitative descriptions of how well an object is expected to perform. . . Examples of specifications are: "The proposed aircraft must cruise at 1000 knots," "... the chassis is to withstand shock of 40 g's," "... it is required that the computer be able to operate in an environment of -50 degrees to +100 degrees C." Specifications are theoretical expectancies, not what an object is or can do (i.e., performance characteristics.)

Technical Status or Progress -- the present condition, accomplished to date or state of the art in a scientific or technical area or project. For example, a quarterly progress report detailing the accomplishments in the development of a new rocket propellant.

Test Process or Procedure -- the method or sequence of events involved in determining the characteristics, capabilities or limitations of an object which has been produced in quantity. For example, a procedure for conducting desert trials of a production model of an Army tank, or procedures for evaluating durability of common textiles.

Utilization -- the scheme for employing material or equipment in particular situations; where and how an object functions within a system. Utilization may also include the procedures employed by personnel in operating a system.

Questions 26 and 27 require recording the number of each DDC (ASTIA) Chunk field and Chunk section, using the same reference for Questions 12 and 13.

Question 28 determines which media conveyed the chunks, and the quantity of each medium. For example, the record for Chunk I, the most important, might appear as:

I -- 3 journals + two conversations with colleague.

Chunk II might appear as:

II -- one technical report + two textbooks + two folders  
from personal files.

Question 29 determines if the respondent habitually uses the persons or media named in Question 28. The key word "habitually" means with predictable regularity. Question 29, therefore, actually asks if the respondent will regularly use these media or persons if he is after the same type of chunk.

If the respondent did not usually use these media or persons for the given type of chunk, he is to indicate, by chunk numeral in Question 30, what he does use habitually. The entries under Question 30 are more specific than those under Question 28. Assume that the respondent obtained a description of the mechanical properties of nylon from a

person or media not named in Question 28. The entry under Question 30 then might appear as:

- III - plastics specialist in the organization's "Materials Testing" branch; technical report from U.S. Army, Plastics Technical Evaluation Center, Picatinny Arsenal, Dover, N.J.; DuPont plastics catalog.

Question 31 asks if the respondent would have preferred the chunk in any physical arrangement or package other than the one he received. If the response is in the affirmative or even anything approaching a neutral position, the interviewer is to show the respondent the 3 x 5 card listing the various types of arrangements and ask his preference. In this question, a few of the arrangements require some elaboration:

- C. Informal oral - person to person, word-of-mouth communication with no rigid structure. For example, an over-the-coffee-cup technical conversation with a colleague.
- D. Formal oral briefing - a structured word-of-mouth talk or address to a group of persons. For example, an address by a contractor explaining new design concepts in a ground effect machine.
- E. Live demonstration - a real life reenactment. For example, actual firing of a nuclear powered rocket engine to display the durability of a new reactor metal.
- F. Microfilm - usually 35 mm filmstrips, or  
Microfiche - a small transparent sheet of film about 5 by 8 inches and containing many 16 mm frames - in some cases as many frames as a microfilm, (or equivalent "Micro" forms.)
- G. Slides or motion pictures - including 35 mm slides, lantern slides, overhead project transparencies, 16 mm and 35 mm motion pictures.
- H. Correspondence and memos - long, formal letters, short interoffice memos, and very brief handwritten notes.

Questions 32 and 33 are companion questions to determine what the respondent received and what he wanted. They measure the number of different opinions or collections of data on a given chunk of information; they do not refer to the size of the body of knowledge. The particular number of different opinions or data sought on a given chunk is indicated by one of the choices: (A) "one good report containing all the information," (B) "a sampling of the information available," (C) "all the material that could be found pertinent to the

question," and in Question 32 (D) "nothing." Suppose, in reply to Question 33, the respondent indicated he wanted "one good report ..." on laser design details. This means that the respondent wanted only one authority's detailed design knowledge of the laser field. "A sampling of the information available" would mean that the respondent wanted different laser design data from several sources, for example, to compare the designs. "All the material that could be found pertinent to the question" would mean that the respondent was looking for all the available detailed design reports and items in the field of lasers. Again a reminder that all the choices in Questions 32 and 33 deal with a given chunk and therefore with a fixed scope of subject matter. These questions measure the extent of the searching required.

The selection of choice "C" (all pertinent material) in Questions 32 and 33 indicates the respondent probably got or wanted large amounts of information. Question 34 determines if title listings or abstracts would have been of material assistance in shortening the search for this pertinent information. After Question 34 is asked, the respondent may indicate he is not familiar with either the abstracts or title listings; in this case, the interviewer should show him the two samples provided. The "yes" choices in this question (B, C, D) indicate which or both of the two forms were desired. Choice (E) indicates the respondent had no preference when choosing between title listings and abstracts. Choice (F) indicates the respondent already used either or both title listings and abstracts.

Questions 35 and 36 relate to retrieval time, as shown in Figure 3. Starting at the time the respondent requested or began searching for the information (time X), the interview measures, respectively, the ACTUAL time it took to find the majority of it (ending at time "Y"), and the MAXIMUM retrieval time the respondent could have allowed (ending at time "Z") and still performed the task on time.

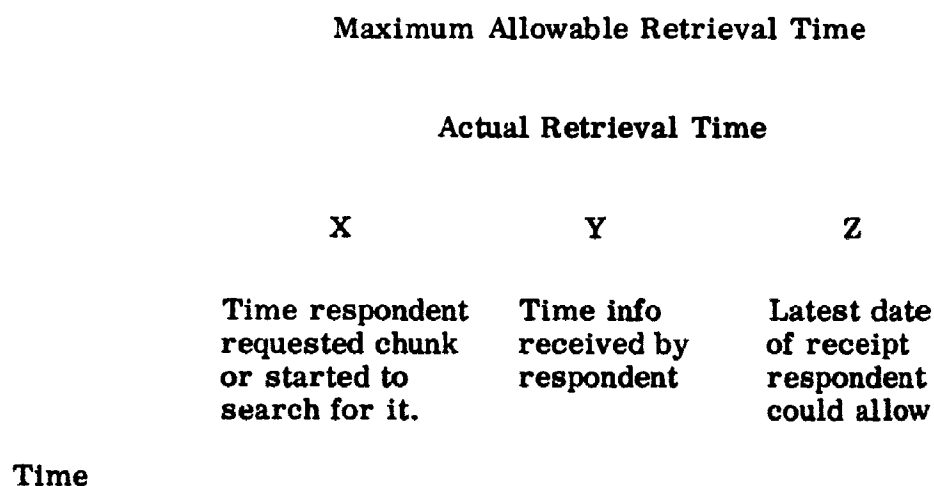

Figure 3. Retrieval Time

Question 37 determines if the respondent wanted the chunk within a few days after it was produced or discovered (Figure 4). This question pinpoints the respondents with urgent need for very new, up-to-date information. The phrase, "... [within] a few days after they were discovered or produced by the originating person" means, for example, no more than a few days after the professional tester observed the performance of a new nuclear weapon or the scientist isolated a new cancer virus.

Figure 4. Information Time

The purpose of Questions 38 and 39 is to determine how detailed the information actually was and how detailed the respondent would have liked it. These questions, for the most part, assume a given breadth of subject matter, and measure only depth. "A once over lightly ..." (overview) and "detailed analysis" are both sizable segments of information covering an entire area, such as lasers, or a significant part of it. The difference is that "A once over lightly ..." (Figure 5) is only a skeleton or summary of the highlights while a "detailed analysis" (Figure 5) furnishes the full depth of knowledge required for expertise in at least some phase of the subject, such as performance, feasibility, production technique. A "detailed analysis" is a long chain of interrelated facts. A "specific answer" (Figure 5) is usually only one fact. Examples of overviews are informative abstracts or the summary type of technical articles found in Aviation Week or the Scientific American. An example of a "detailed analysis" is a textbook on the design of electronic waveguides. An example of a "specific answer" is the boiling point of titanium tetrachloride.

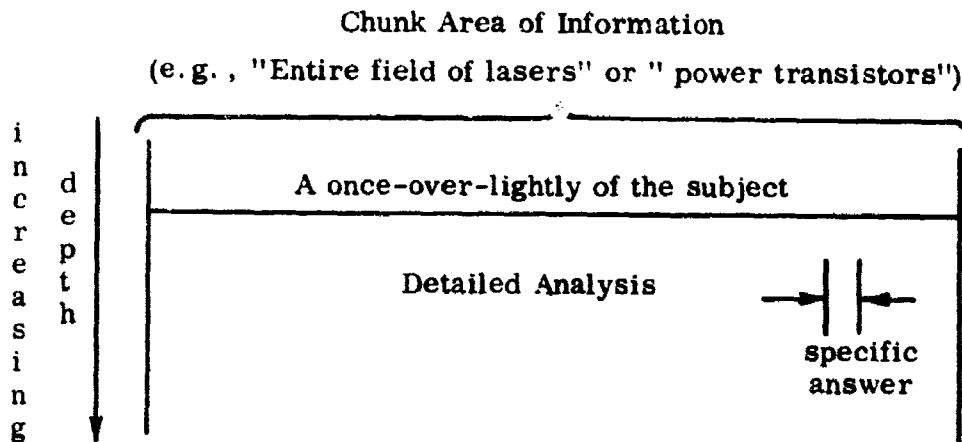

Figure 5. Depth of Subject Matter

Question 40 asks how the chunk was laid out, while Question 41 asks how he wanted it laid out. As indicated by the choices, these questions refer to the physical layout and mode of communication (i.e., the format) within the information package or container. Certain choices for Questions 40 and 41 warrant elaboration:

- C. Tables and lists — for example, tables of trigonometric functions, lists of specifications.
- F. Graphical and text —
- G. Photos and text — the more popular combinations of choices "B" through "E."
- H. Graphical and lists —

When asking Question 41, the interviewer furnishes the respondent with a 3 x 5 card, listing these various types of information layout.

Questions 42 through 45 deal with the first source of information for each chunk. Question 42 determines the first person or organization consulted by the respondent in his search for the chunk (other than any mental search he may have made). Since most choices in the question are self-explanatory, the following descriptions cover only a few of the choices:

- B. Supervisor — in this case, the supervisor of the respondent.
- D. Consultants (outside) — a specialist brought in and paid, directly or indirectly, to solve or advise on a particular problem: this specialist is usually not a member of DOD.
- E. Colleague — a co-worker, usually professional, and not semi-professional such as a technician. The colleague is usually in any DOD agency, and that agency may or may not be the same as that of the respondent. The colleague may also be employed outside DOD: for example, by a contractor.
- J. Information or Data Centers — organizations established to answer specific scientific and technical queries or requests for documents. Examples are the Defense Documentation Center and the Battelle Defense Metals Center.

Question 43 determines the principal reason behind the respondent's using this source for the chunk. Several of the choices require elaboration:

- A. Received with task assignment — information chunk was provided respondent at the time he was given the task.
- B. Most authoritative — the first source was considered by the respondent as the preeminent expert.

- C. Only source known — was the one and only source the respondent knew. If the first source was the only one known, this choice should be the one recorded even though the source was, by default, obviously also the "most authoritative" and the handiest ("availability").
- D. Availability (handy) — the first source was the easiest one to consult — often by virtue of its physical proximity or as a habit.
- E. Recalled from mind that specific chunk was available from this source — stored in the respondent's head was the recollection that he could obtain the chunk from this first source. In this case the interviewer should attempt to find out and record how the respondent learned of this reference.
- F. Found helpful previously — the respondent satisfactorily gained information from this first source at some prior date.

Question 44 determines the exact words used to interrogate the first human source or the procedures used for interrogation if the source was inanimate. The exact words — minus social chit-chat — or the exact procedures as related by the respondent are to be recorded. If the source was an object, such as a library card catalog, the interviewer is to determine what questions were to be satisfied by the card catalog, and what terms the respondent expected to find in the card catalog.

Question 45 determines how much of the information chunk the respondent got from the first source. The choice determines whether the first source: (A) provides the respondent with the complete chunk; (B) gives the respondent only part of the chunk; (C) guides the respondent to the information elsewhere; or (D) furnishes nothing.

Questions 46 and 47 no longer refer to the first source; they return to the entire chunk. Question 44 measures the importance of the chunk in completing the task. It provides the choices: (A) absolutely essential to task (indispensable); or (B) the respondent could somehow have completed the task without it (not indispensable).

Question 47 determines the manner in which the information was used: (A) as working level information used directly in completing the task; (B) as background material; (C) as a lead to other information; or (D) not at all. The interviewer will always select choice (A) if the information is used directly in the task, regardless of whether or not it also served as background material or as a lead to other information.

Question 48 determines if the respondent discovered, after the task was completed, some information that would have been useful, and that was available but unknown to him during the task. Note that this question relates to the total task, not to a chunk. If the respondent answers question 48 in the affirmative, the interviewer should note, in the "comments" section, what type and quantity of information was discovered and how important it was to the task completion.

Question 95, which was added after the field interviewing began, is intended to qualify and round out Question 48. It is essentially self explanatory and is recorded in actual number of days since the task was completed.

#### 4.8 Part III — Utilization of Information Centers

This section of the interview guide is aimed chiefly at learning why the respondent does or does not use DDC or the DOD specialized information and data centers.

Question 49 measures how often the respondent comes in contact with TAB, the DDC Technical Abstract Bulletin which is issued twice each month. The degrees of frequency are:

- A. almost every issue
- B. about once every two or three months
- C. no more than once every six months
- D. never reads TAB; of course if the respondent does not know of TAB (E), he never reads it; however, NEVER mark (D) unless the respondent knows of TAB and has some reason for not reading it. This eliminates the possibility of choosing both (D) and (E) in the same interview.
- E. does not know of TAB

Questions 50 and 51 ask why the respondent does or does not use DDC. The negative choices in Question 51 which need further explanation are:

- B. Physical location — the respondent feels, rightly or wrongly, that DDC or its field information centers are too remote from him.
- C. Red tape — there are too many administrative obstacles and too much paper work.
- D. Security — excessive safeguards and proof of need-to-know associated with classified materials.
- E. Time — excessive retrieval time.
- F. Not relevant — materials are not pertinent to the respondent's needs.

Questions 52 and 53 ask why the respondent does or does not use the DOD specialized information and/or data centers. These two questions are structured exactly like Questions 50 and 51 which inquire about DDC. When the interviewer asks Question 52, he shows the respondent the list of specialized information centers shown in Appendix B.

The purpose of Questions 54 and 55 is to check the use of the foreign technology abstracting and translation services made available by DOD. After the interviewer asks these questions, he returns to page one to complete the respondent's profile.

#### 4.9 Part IV — General Information Patterns

Whereas Part II concentrated on the information needs for one task, Part IV is a deliberate attempt to generalize about the respondent's information problems over the past year. Part IV returns will constitute a very important supplement to the Part II responses.

A running commentary of the answers to Part IV questions should be recorded on the lined worksheet. After conclusion of the interview, the pertinent comments are condensed and entered under the Part IV questions.

Question 56 determines if the respondent had any major problem locating scientific and/or technical information. If the reply is "Yes," the interviewer is to detail the nature of the difficulty, Question 57, and proposed solutions offered by the respondent, Question 58. For example, a respondent might indicate that he always has had a serious problem selecting an appropriate type of transistor for a new electronic circuit. Further probing might reveal that the real cause of this problem is the respondent's inability to keep his own manufacturers' catalogs up to date because of the constant flood of addenda and announcements from the various suppliers. His proposed solution might be to have all manufacturers' catalog data collected by a central agency which would compile the data and regularly publish it in one handy package.

The interviewer is encouraged to probe in great depth in Part IV. If more space is needed for formal comments, he may use the reverse side of the last Interview Guide sheet.

#### 4.10 Part V — Subjective Comments of the Interviewer

Question 59 asks for an appraisal of the respondent's general needs for external technical information. The first choice, "Has a very large need . . ." means the respondent usually secures an exceptionally large amount of his input information from external sources; the respondent usually considers the sources essential for accomplishing most tasks. The term "external" means sources outside the immediate work environment. For example, "external" sources would be DDC, remotely located libraries with which the respondent is not familiar, personnel in other agencies with whom he has infrequent contact. Examples of sources and documents which are not external are the respondent's own files, a favorite text on a colleague's desk, his departmental library, documents he frequently consults in a local university, or documents he stores in his home.

The choice, "Has moderate need . . ." means the respondent relies on external sources for a significant but not exceptional amount of information; these sources often are not absolutely essential for successfully completing his tasks.

#### 4.11 Part VI — Subjective Evaluation of the Task and Task Output

Question 93 is a synthesis of the three unnumbered questions on page 3a (see Interview Guide). It represents a subjective evaluation of how well the specific task would potentially fit into a man-machine relationship in the sense that the task might have been programmed and accomplished in some automated fashion. The answers to the three questions are used by the interviewer to aid him in evaluating the task into one of four categories. One of the key factors in making this evaluation is the professional knowledge or intellect needed to perform the task. The three unnumbered questions on page 3a are to be completed during the normal course of the interview process in the field. Question 93 is to be derived at the completion of the field interviews by each interviewer, based upon the following four category descriptions.

##### Category

##### Description

1

The task can possibly be mechanized. There is essentially one obvious or prescribed method to use or procedure to follow to conclude the task. It was quite clear and obvious how the task was to be accomplished, and it required a relatively low order of intellect to produce or to conclude the task. An example of such a task would be a telegraph key operator who performs a rather routine type of task along with prescribed procedures.

2

Task difficult to mechanize. The choice of procedures or methods required in order to conclude the task required very little professional knowledge or judgment. It was fairly clear and obvious how the respondent was to accomplish the task and it required a modest amount of intellect to draw the task to a successful conclusion.

3

Task very difficult to mechanize. The choice of methods to proceed to the conclusion of the task required some professional knowledge in order to be successful. There was considerable intellect and professional judgment required to conclude the task successfully. By and large this category includes those tasks of an analysis or of an evaluation nature.

4

Impossible to mechanize. There were no methods or procedures in existence to follow to bring the task to a conclusion. It was not at all clear or obvious where or how the respondent should obtain his information. The output of the task generally involved the creation of new information. There was a great deal of intellect and professional knowledge required to conclude the task successfully.

**Question 94 on page 3a is a subjective analysis of the output of the task. The multiple-choice replies were determined on the basis of the following criteria:**

- (1) What was the essential nature of the output of the task?**
- (2) Did the task essentially produce results if the outputs were an analysis? (Possible results are listed.)**
- (3) With which topic (if any) was the analysis principally concerned? (Several choices are listed.)**

April 21, 1964

Mr. John Doe  
David Taylor Model Basin  
Carderock, Maryland

Dear Mr. Doe:

You have been selected to participate in a DOD study of how RDT&E personnel acquire and use scientific and technical information. Reproductions of letters from Dr. Harold Brown, Director of Defense Research and Engineering, and from Mr. Fred Koether, Director of Technical Information, ARPA, are enclosed explaining the purpose and importance of this study.

In order to utilize most effectively the time allowed for the project, we would like to have Mr. Joseph Smith interview you at your office beginning at 0830 for approximately two hours on 30 April 1964.

Because of the difficult scheduling problem, we ask that you give priority to the date and time requested for your interview. If it is impossible for you to comply with this schedule, please notify my office as soon as possible so that an alternate time may be arranged. You can reach me by calling collect Philadelphia LO 3-7737, extension 85.

Your cooperation in this matter is greatly appreciated.

Sincerely,

AUERBACH Corporation

H. F. Sieber, Jr.  
Project Engineer

DIRECTOR OF DEFENSE RESEARCH AND ENGINEERING  
WASHINGTON 25, D. C.

9 January 1964

MEMORANDUM FOR The Assistant Secretary of Defense (Civil Defense)  
The Assistant Secretary of Defense (Comptroller)  
The Assistant Secretary of Defense (I&L)  
The Assistant Secretary of Defense (ISA)  
The Assistant Secretary of Defense (Manpower)  
The Assistant Secretary of Defense (R&D)  
The Assistant Secretary of the Army (R&D)  
The Assistant Secretary of the Navy (R&D)  
The Assistant Secretary of the Air Force (R&D)  
Chief, Defense Atomic Support Agency  
Director, Defense Communications Agency  
Director, Defense Intelligence Agency  
Director, National Security Agency

SUBJECT: DoD Study of Users of Technical Information

The Office of the Director of Technical Information, through the Advanced Research Projects Agency, is sponsoring a contract with the Auerbach Corporation of Philadelphia, Pennsylvania, to study how DoD technical people use scientific and technical information.

In this connection the Auerbach Corporation will conduct personal interviews with selected personnel conducting research, development, test and evaluation throughout the Defense establishments. People to be interviewed will be selected from a random sampling of the DoD scientific and technical population. They will be interviewed at their desks, and their names will not be identified with the interview results. The survey will be conducted on an unclassified basis.

A pilot survey will be conducted in the Washington, D. C. area beginning 15 February 1964 and ending 15 March 1964. The main survey will be conducted from the middle of April through the middle of October and will cover all Defense establishments in the Continental United States.

It will be necessary for the contractor to arrange appointments with personnel who are selected in the sample. I would be grateful for your cooperation in calling this important survey to the attention of all of your components engaged in RDT&E work and urging them to assist the contractor in carrying out the interviews.

A handwritten signature in cursive script, appearing to read "H. Brown", with a large, stylized initial "H".

HAROLD BROWN

Deputy Directors, DDR&E

**ADVANCED RESEARCH PROJECTS AGENCY**  
**WASHINGTON, D.C. 20301**

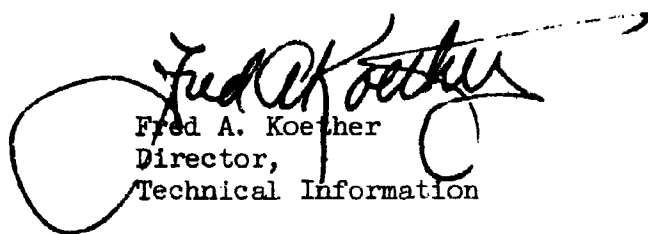

Gentlemen:

This letter introduces \_\_\_\_\_,  
an employee of the AUERBACH Corporation, Philadelphia, Pennsylvania,  
which has been retained by the Advanced Research Projects Agency  
of the Department of Defense under contract number SD-219, to  
conduct a study of scientific and technical data use. This study  
is to explore how scientific and technical information is acquired  
and used by Department of Defense scientists and engineers who are  
engaged in research, development, test and evaluation.

The above named person is entering this installation for the purpose  
of conducting a number of interviews with specific people whose  
names have been randomly selected from the total population of  
Department of Defense personnel classified as working in research,  
development, test and evaluation. It is my wish that you extend  
him all the courtesy and assistance he might require to accomplish  
his assignment.

Sincerely,

1 Incl:  
DDR&E Memo  
9 January 1964

  
Fred A. Koether  
Director,  
Technical Information

**PART II**

**ANALYSIS OF TASK INFORMATION**

**Note to Interviewer:** In the following sequence of questions, if the respondent has done nothing recently, or if the task is less than eight hours, or if there are no technical considerations in the task, work back in time until you find a concluded task that satisfies the task criteria.

Now let us focus upon the work you have recently completed.

- (a) Briefly, could you tell me what you have been doing in the last few days?
- (b) What is the most recent task you have completed?
- (c) Since you finished this, what have you been doing?

**NARRATIVE DESCRIPTION OF TASK:**

---

---

---

---

---

13. Note to Interviewer: Record the field and section of the task.

96  
Field Section

14. What was the kind, or level, of the major output of the task?

12   13

- A. Research
- B. Exploratory development
- C. Advanced development
- D. Engineering development
- E. Operational development
- F. Reliability - Quality Control
- G. R&D Support
- H. Other (Specify)

14

15. Was the task assigned?

- A. Yes (skip to 17)
- B. No

15

16. If the task was not assigned, how did it originate?

- A. Self generated
- B. Joint decision
- C. Other

16

17. What was the date you personally started this task?  
What was the date you completed this task?

No. Unit

17

On the average, what percentage of your own personal time was devoted to this task?

- A. 20% or under
- B. 40% or under
- C. 60% or under
- D. 80% or under
- E. 100% or under

18

☐

19. Could you describe in more detail the physical form or forms of the major output of the task?

---

---

---

20. Was the major output of the task (A) a finding, (B) a recommendation, or (C) a decision?

20

☐

---

---

---

21. Was the major output of the task (A) oral, (B) written, or (C) other?

21

☐

---

---

---

22. Was the major output of the task (A) formal or (B) informal?

22

☐

---

---

---

23. Was the major output directed (A) to or within DOD or (B) outside DOD?

23

☐

---

---

---

94. Evaluate and record the output of the task according to both the general definitions of the classes of the chunks plus the amendments below. The evaluation should be conducted along the vein of "Was the essential nature of the output A, B, C, etc.," or "Did the task essentially produce A, B, C, etc.?" In the case of an analysis type of output, the choice should be made within the framework of, "Was the analysis principally concerned with A, B, C, etc.?"

- A. Concepts
- B. Cost and funding; administrative action
- C. Designs or design techniques
- D. Experimental processes and procedures
- E. Math aids and formulae; computer programs
- F. Performance and characteristics
- G. Production processes and procedures
- H. Raw data
- I. Specifications
- J. Technical status
- K. Test processes and procedures
- L. Utilization
- M. Other
- N. Evaluation

94

☐

95. At the beginning of the task was there (A) essentially one obvious or prescribed method of use or procedure to follow, (B) a choice of procedures or methods requiring little or no professional judgment, (C) a choice of methods or procedures requiring some professional knowledge to follow successfully, (D) no methods or procedures to follow.

When the interviewee began to address himself to accomplishing this task, was it (A) quite clear or obvious, (B) fairly clear or obvious, (C) not at all clear or obvious, where or how he should go about obtaining the information.

Would you consider the output of the task: (A) a rearrangement of existing information, (B) an evaluation or analysis, (C) the creation of new information.

☐☐☐

95

☐

**Note to Interviewer:** In the following sequence of questions, enumerate and discuss all information "chunks" that relate to the previously mentioned task. Record them narratively. Explain to respondent that you are going to then ask a series of questions about how he obtained information, and what information he used on each of these chunks.

24. Now I am going to focus my questions on all the chunks of information you used to accomplish this task. What were these chunks? Would you describe each of them to me?

- (a) Which, if any, of these information chunks did you get with this task assignment?
- (b) Did any information chunks come to you informally, that is, information you may have gotten orally from a colleague, a phone call, etc.?
- (c) Was there any information you wanted at the beginning or during the task that was not obtained by the end of the task?
- (d) Were there any other information chunks that you can think of that helped you in this task?

I \_\_\_\_\_

\_\_\_\_\_

II \_\_\_\_\_

\_\_\_\_\_

III \_\_\_\_\_

\_\_\_\_\_

IV \_\_\_\_\_

\_\_\_\_\_

V \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

- (e) Would you rank them in their order of importance if appropriate?

Note to Interviewer: Record below the class, field, and section of each information chunk.

CLASS

- A. Concepts
- B. Cost and funding
- C. Design techniques
- D. Experimental processes
- E. Math aids and formulae
- F. Performance and characteristics
- G. Production processes and procedures
- H. Raw data
- I. Specifications
- J. Technical status
- K. Test processes and procedures
- L. Utilization
- M. Other

This series of seven tables shows the relationship between the field of the task, the field of the information sources, and the type of person or organization contacted to acquire the information. The analysis of these tables indicates that there are no significant relationships between the field of the task, the field of the information banks, and the use of any particular first source to acquire the information.

## 42A Received with Table FIELD OF TASK vs. FIELD OF CHUNK

K va. FIELD OF CHUNK

[illegible]**vs. FIELD OF CHUNK**[illegible]

[illegible]

## 3542 - 1 - ACTUAL LENGTH OF RETRIEVAL TIME vs. FIRST SOURCE

This table shows that, when information is obtained in less than one day, the department bookcase and personal files are commonly used as the first source. When information is obtained in less than one week, colleagues and manufacturers are commonly used as the first source. When information is obtained in one week or more, the library is used to some extent.

## 3643(u) - 1 - DESIRED RETRIEVAL TIME vs. FIRST SOURCE

When the desired retrieval time for information is under one week, colleagues, one's own collection, and department files seem to be heavily used as a first source of information. As the retrieval time increases, there is a tendency to assign a subordinate to locate the required information.

36-42	A	B	C	D	E	F	G	H	I	J	K	L	BLNK	RD OF	TOTAL

4895(u) - 1 - POST TASK INFORMATION vs. TIME SINCE TASK WAS COMPLETED

This table shows the effect elapsed time after the completion of the task has on the discovery of unknown, but existing, data. After completion of a task, no increased amount of information is discovered as the time increases.

5256 - 2 - USE OF INFORMATION CENTERS vs.  
PRESENCE OF INFORMATION  
PROBLEM

Using the chi squared test with the null hypothesis that  
the use of information centers is independent of the  
difficulty in locating information, it was found that at  
the five percent confidence level the hypothesis should  
be accepted. This implies that there is no relationship  
between the use of information centers and a person's  
problem of locating information.

This table shows there is little relationship between the class of information used to accomplish a task and the output or nature of the task itself.

[illegible]

9428 - 2 - NATURE OF TASK VS. MEDIA

This table shows few outstanding features. This, however, is significant since it implies there is little or no relationship between the media used to acquire the information and the output or nature of the task itself.

10D R&D Support People: FIRST SOURCE vs. KIND OF TASK

This table shows that R&D support people doing R&D support tasks use as their first source of information their own collection 18 percent, a colleague 24 percent, and task assignment 12 percent of the time. This table shows some of the effects of the large number of math and programmer type people who are classed as R&D support, and characteristically receive a large amount of their work with the task assignment.

171214 - 1 - MAN-DAYS OF TASK vs. FIELD OF TASK vs. KIND OF TASK

This series of four tables shows the effect of the change in level of effort of tasks in relation to the field of the task and the kind of task. The outstanding feature of these tables is that as the level of effort of the task increases, there is no change in either the field of the task or the kind of task.

These four tables show how a change in level of effort of tasks affects the kind of task and the media used to obtain the chunks of information. As a composite, these tables indicate that: (1) as research tasks increase in effort, there is an increased use of texts and demonstration-experimentation, and a decreased use of previous knowledge to obtain information chunks; (2) engineering tasks show little or no change in the use of media as the level of effort of the task changes; (3) as R&D support-type tasks increase in effort, there is a slight decrease in the use of texts and previous knowledge to obtain information chunks.

[illegible]

This series of seven tables shows the use of different information chunks and their respective fields relative to the field of the task. They illustrate the primary need for information within the field of the task while interdisciplinary information is required to a somewhat lesser extent for all classes of information.

2. The use of handbooks, field journals, and other sources of information is essential to the development of the field journal. In the development of the field journal, the researcher must first determine the type of information needed. In the field, the researcher's field journals are mainly used to obtain specifications and performance characteristics information. Handbooks and manuals are seldom used in the ordnance field to obtain specifications and performance information.

2.2.1. Concepts FIELD OF GUNCK vs. MEDIA

# 0924 - TYPE OF ACTIVITY vs. CLASS OF TASK

This table shows that research tasks are principally performed by detailed scientific or engineering people. Tasks in engineering and R&D support involved a proportionately higher percentage of technical evaluation and technical administration people than did research tasks.

9-14	A	B	C	D	E	RD DF	TOTAL

0942 - 1 - TYPE OF ACTIVITY vs. FIRST SOURCE

This table shows that technical administrative people get very little information with the task assignment. These same people also use colleagues more as a first source of information and their own collections less.

0950 - 2 - TYPE OF ACTIVITY vs. USE OF DDC

The chi-squared test was used on the data in this table to test the null hypothesis that there is no statistically significant relationship between a person's type of activity and whether or not he uses DDC. This calculation was made at the five percent confidence level and resulted in rejecting the null hypothesis. This table shows DDC is used by detailed scientific and engineering type people more so than by technical administrative people.

1012 - 2 - KIND OF ACTIVITY vs. FIELD OF TASK

This table shows that research people are doing fewer tasks proportionally in the fields of aircraft and flight equipment, communications, and electronics, and more in the fields of medicine and physics, fluid mechanics, and nuclear physics. Engineering people are doing more tasks in the field of guided missiles than in other fields.

## 1025      - 2 -      KIND OF ACTIVITY vs. CLASS OF CHUNK

This table indicates that there is no relationship between the kind of activity of a person and the classes of the chunks of information. (See Table 1425.)

[illegible]

This table shows that in those cases where the use of search aids was examined, they were already being used or would have been used relatively more often by research people than by other people.

## 1134 - 2 - FIELD OF ACTIVITY vs. USE OF SEARCH AIDS

This table shows that people in the fields of communications and electronics wanted to search for material without using a search aid. People in the fields of physics, nuclear physics, and fluid mechanics were found to use, and want to use, search aids to a considerable extent. People in the field of ordnance seldom use search aids.

## 1142 - 1 - FIELD OF ACTIVITY vs. FIRST SOURCE

This table shows that people in aircraft and flight equipment use manufacturers and suppliers proportionally more as a first source of information. People in the field of ordnance do not use the library as a first source of information, whereas medical people do. However, the total use of the library as a first source is small.

1148 - 1 - FIELD OF ACTIVITY vs. POST  
TASK INFORMATION

This table shows that people in mathematics-statistics find relatively more information available after the completion of the task than do people in other fields. The reverse is true for people in the field of ordnance.

This comparison shows that people in the fields of communications, electronics, and ordnance are doing relatively more design tasks than those people engaged in other fields. The comparison also points out that people working in chemistry are doing many tasks of an experimental nature.

# 1214 - 1 - FIELD OF TASK vs. KIND OF TASK

This table shows that relatively few research tasks of a research nature are being performed in the fields of aircraft and flight equipment, guided missiles, and ordnance. There are relatively many more of a research nature being performed in the fields of medicine, physics, nuclear physics, and fluid mechanics. Also, relatively more tasks of an engineering nature are being performed in the field of aircraft and flight equipment.

## 1234 - 2 - FIELD OF TASK vs. USE OF SEARCH AIDS

This table shows that people engaged in tasks in the fields of medicine, physics, nuclear physics, and fluid mechanics use search aids proportionally more than those engaged in tasks in other fields.

12-34	A	B	F	X	RD DF	TOTAL

## 1242 - 1 - FIELD OF TASK vs. FIRST SOURCE

With one exception, this table does not show any relationship between the field of the task and choice of the first source. The exception is that people performing tasks in the field of aircraft and flight equipment tend to choose manufacturers and suppliers proportionally more as a first source of information.

12-42	A	B	C	D	E	F	G	H	I	J	K	L	RD DF	TOTAL

## 2526 - 1 - CLASS OF CHUNK vs. FIELD OF CHUNK

This table shows the class and field of the chunks of information found to be used in the survey. Math and formula chunks are somewhat unique use from other chunks, as do concept chunks. It was found that concept chunks are used to a considerable extent in the fields of physics, nuclear physics, and fluid mechanics. Also see Tables 1225, 1226 and 4225, 4226.

100	100	100	100	100	100	100	100	100	100			100

This table shows the following highlights: concept information is found proportionally more in texts and journals and less in engineering type media. Cost and funding information is obtained by the oral media. Math and formula information is found in texts, manuals, and handbooks. Performance and specification information, to a great extent, comes from category A (engineering media), the oral mode, and in proposals and reports, and is not found in texts. Status information is principally obtained by way of proposals and reports, the oral mode, and journals.

2533 - 2 - CLASS OF CHUNK vs. THE DESIRED EXPOSURE  
TO INFORMATION

This table shows that for concept and status information chunks there is less desire to see just one item of the available information. Math information seekers tend to want to see only one item of the available information.

2545 - 1 - CLASS OF CHUNK vs. INFORMATION OBTAINED  
FROM FIRST SOURCE

This table shows that the first source used to obtain status information did not provide much information. This table also shows that the first source used to obtain raw data information provides a great deal of the information. This, however, might be explained by the fact that raw data is often received with the task assignment.

table show to use se mation in e or want	
---	--

This table shows that tasks in the field of medicine tend to use and want to use search aids to a considerable extent. People seeking information in the field of communications and electronics tend not to use or want to use search aids.

Two-element intersection

Print positions 1-65.

"INTERSECTION--QUESTION XX, ANSWER III--  
QUESTION YY, ANSWER JJJJ."

Three-element intersection

Print positions 1-91.

"INTERSECTION--QUESTION XX, ANSWER III--  
QUESTION YY, ANSWER JJJJ--QUESTION ZZ,  
ANSWER KKKK."

- (iii) Combination Inquiries. W, appearing below, indicates a field for the specified Interview Question Identification Number. Combination inquiries are identified the same as single or two element intersection inquiries with the addition of "---DISTRIBUTE WW."

(b) Identification of Each Matrix in Three-level Frequency Distribution

<u>Print Positions</u>	<u>Description</u>
1-2	Specified Interview Question Identification Number for first specified interview question.
3	Hyphen.
4-7	Interview Answer to first specified interview question.

(c) Matrix Format for Frequency Distribution Inquiries and Combination Inquiries Following Inquiry Identification Line

All frequency distribution inquiries and combination inquiries.

(i) Column headings

<u>Print Positions</u>	<u>Description</u>
(2-6 are blank for simple frequency distributions and combination inquiries)	
2-3	Specified Interview Question Identification Number for interview answers arrayed vertically as row headings.
4	Hyphen.
5-6	Specified Interview Question Identification. Numbers for interview answers arrayed horizontally as column headings.

Print Positions

Description

8-11, repeated every 8th print position for up to 16 matrix columns per print line and continued in subsequent matrix segments for up to 34 matrix columns if required.

Interview answers to specified interview question.

Beginning with 8th print position past first position of last column heading field entered.

"RD DF" for row % rounding difference.

16th print position past first position of last column heading used.

"TOTAL" for row totals.

(ii) Row % (Up to 34 rows for a single matrix)

Print Positions

Description

1-4

Interview answers to specified interview question. (Positions 1-4 are blank for simple frequency distributions and combination inquiries.)

7-8, repeated every 8th print position for each matrix column.

Two digit row % with high order zero suppression.

Three character field beginning with 8th print position past first position of last row % field entered.

First character either blank or minus. Second and third characters with high-order zero suppression for row % rounding difference.

Three character field beginning with 16th print position past first position of last row % field entered.

Always 100 for total row %.

- (iii) Frequency (Print line immediately following corresponding row %. Up to 34 rows for a single matrix.)

<u>Print Positions</u>	<u>Description</u>
8-11, repeated every 8th print position for each matrix column.	Frequency for matrix cell. High-order zeros suppressed.
Four character field beginning with 16th print position past first position of last frequency field entered.	Total row frequency with high-order zeros suppressed.

Additional lines for matrix for two- or three-level frequency distributions only.

- (i) Column % (Print line immediately following corresponding frequency. Up to 34 rows for a single matrix.)

<u>Print Positions</u>	<u>Description</u>
11-12, repeated every 8th print position for each matrix column.	Two digit column % with high-order zero suppression.
Two character field beginning with 16th print position past first position of last column % field entered.	Two digit column % for total column with high-order zero suppression.

- (ii) Column % rounding difference.

<u>Print Positions</u>	<u>Description</u>
1-5	"RD DF" for line header for column % rounding difference line.
10-12, repeated every 8th print position for each matrix column.	First character either blank or minus. Second and third characters with high-order zero suppression for column % rounding difference.
Three character field beginning with 16th print position past first position of last column % rounding difference field entered.	First character either blank or minus. Second and third characters with high-order zero suppression for column % rounding difference of total column.

(iii) Row % in total line.

<u>Print Positions</u>	<u>Description</u>
1-5	"TOTAL" to identify total row.
7-8, repeated every 8th print position for each matrix column.	Two digit row % with high-order zeros suppressed.
Three character field beginning with 8th print position past first position of last row % field entered in total line.	First character either blank or minus. Second and third characters with high-order zero suppression for rounding difference field for row % of total line.
Three character field beginning with 16th print position past first position of last row % field entered in total line.	Always 100 for total row % of total line.

(iv) Frequency in total line

<u>Print Positions</u>	<u>Description</u>
8-11, repeated every 8th print position for each matrix column.	Total column frequency with high-order zeros suppressed.
Four character field beginning with 16th print position past first position of last frequency field entered.	Total row frequency of total line with high-order zeros suppressed.

(v) Column % in total line.

<u>Print Positions</u>	<u>Description</u>
10-12, repeated every 8th print position for each matrix column.	Always 100 for total column %.
Three character field beginning with 16th print position past first position of last total column % field entered in total line.	Always 100 for total column % of row total column.

(d) Format of Responses to Intersection Inquiries  
Following Inquiry Identification Line

<u>Print Positions</u>	<u>Description</u>
1-4, repeated every 6th print position for up to 22 fields per print line and continued indefinitely in subsequent print lines.	Accession numbers of interviews meeting the specifications of intersection inquiries. High-order zeros are suppressed. (Printing these numbers may be suppressed if desired by entering a '2' in the Record Code field of Inquiry Card.)
Five position field beginning with 6th print position past the first position of the last accession number field entered.	"TOTAL" to precede the number representing the total number of accession numbers meeting the specification of the intersection inquiry.
Four position field beginning with 12th print position past the first position of the last accession number field entered.	Total number of accession numbers meeting the specification of the intersection inquiry.

(3) Operator Instructions

(a) Program Title and Number

FORMAT ANALYZED DATA AND PRINT, ME004

(b) Tapes

(i) Input - Sorted Interview Data Analysis Tape on Tape Drive

(ii) Output- Unreadable record dump tape on Tape Drive 1.

(c) Cards - Input

Insert the Date Card in the object program deck before the first EX card (0167 in card columns 72-75).

(d) Sense Switches. I/O and A-ON, for processing last tape reel of input file. (This is the case when the input file is contained on one reel.)

I/O, A, and G-ON, for processing tape reels other than the last when there is a multi-reel input file. When each input reel is completed, the program rewinds and unloads the reel and halts to permit the operator to mount the next reel. When the operator mounts the last reel of the file, he must turn Sense Switch G Off. He must press START to continue the program.

(4) Programmed Error Instructions

(a) Error 1 (ER01)

- (i) Printout: Print contents of input tape record in process.
- (ii) Condition: The matrix capacity of 612 cells (not counting rounding difference and total cells) for a simple frequency distribution is exceeded by the input tape record in process. This condition arises because at least one invalid answer was recorded for an interview question.
- (iii) Programmed action: The inquiry whose responses exceed the matrix capacity is not processed and all input tape records relating to this inquiry are by-passed.
- (iv) Corrective action: Determine from the printout which interview question has an invalid answer. Search the Interview Data Tape for the interview(s) for which an invalid answer was recorded. Correct the Interview Data Tape by a file maintenance run of the program INTERVIEW DATA TAPE-CREATION AND MTCE (ME001). Completely process the inquiry against the corrected Interview Data Tape using the program INTERVIEW DATA TAPE ANALYSIS (ME002).

(b) Error 2 (ER02)

- (i) Printout: Same as for Error 1.
- (ii) Condition: The matrix capacity of 34 columns (not counting columns for row heading, row percent rounding difference, and the row totals) for two- or three-level frequency distributions is exceeded by the input tape record in process. This condition arises because at least one invalid answer was recorded for an interview question.
- (iii) Programmed action: Same as for Error 1.
- (iv) Corrective action: Same as for Error 1.

(c) Error 3 (ER03)

- (i) Printout: Same as for Error 1.
- (ii) Condition: The matrix capacity of 34 rows (not counting rows for column heading, column percent rounding difference, and the column totals) for two- or three-level frequency distributions is exceeded

by the input tape record in process. This condition arises because at least one invalid answer was recorded for an interview question.

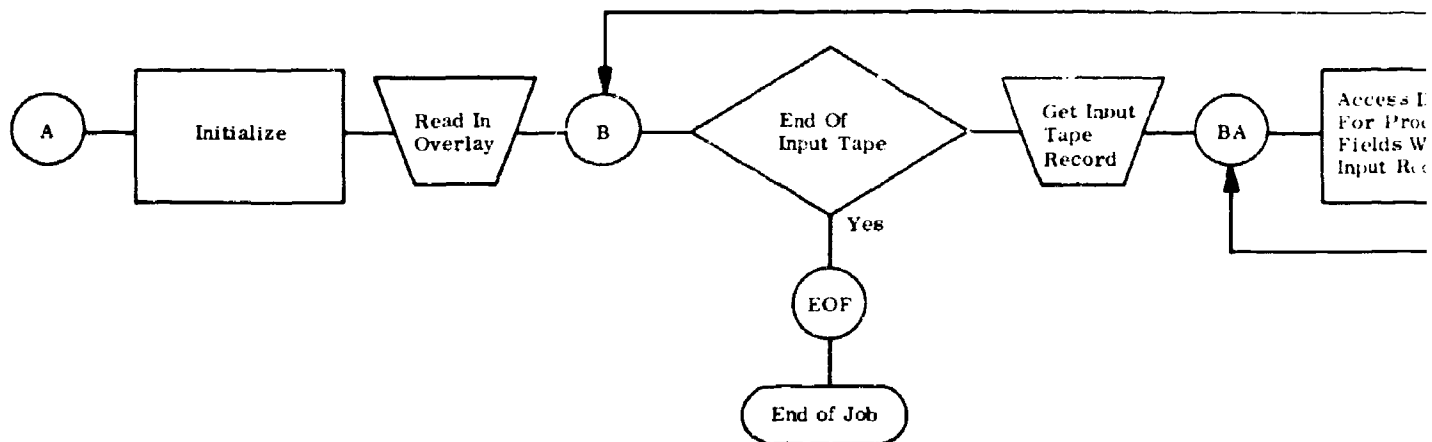

- (iii) Programmed action: Same as for Error 1.
- (iv) Corrective action: Same as for Error 1.
- (d) Error 4 (ER04)
  - (i) Printout: Same as for Error 1.
  - (ii) Condition: Input tape record contains a record code other than blank, 1, 2, or 3.
  - (iii) Programmed action: The input tape record in error is not processed. Other tape records for the inquiry are processed.
  - (iv) Corrective action: This condition should never occur. Consult programmer.
- (e) Error 5 (ER05)
  - (i) Printout: Same as for Error 1.
  - (ii) Condition: The matrix capacity of 34 cells (not counting rounding difference and total cells) for a combination inquiry is exceeded.
  - (iii) Programmed action: Same as for Error 1.
  - (iv) Corrective action: Same as for Error 1.

#### 5.11 COMPUTER RUN TO POOL INTERVIEW ANSWER CATEGORIES

This run combines the answers to certain interview questions into more general categories. The original answers are taken from the Interview Data Tape, and the more general answers along with the unchanged answers are written on the output tape in exactly the same format as the Interview Data Tape. The tables for the conversion appear in the program listing and are identified by the number of the interview question converted. See Figure 5-7 for general logic flowchart.

- (1) Input Data Description. The Interview Data Tape is input.
- (2) Output Data Description. The Pooled Interview Data Tape is output. The format is exactly the same as for the input tape mentioned above.

Note: Connectors  refer to  
 symbolic labels which appear  
 in the program listing.

Figure 5-7. General Logic Flow Chart.  
Interview Data Tape-Pooling Categories (ME005)

(3) Operator Instructions

(a) Program Title and Number

INTERVIEW DATA TAPE-POOLING CATEGORIES, ME005.

(b) Tapes

- (i) Input - Interview Data Tape on Tape Drive 2.
- (ii) Output - Pooled Interview Data Tape on Tape Drive 3.  
Unreadable record dump tape on Tape Drive 1.

(c) Cards

- (i) Date Card. Insert the Date Card in the object program deck before the first EX Card (0126 in card columns 72-75).
- (ii) RDLIN Card (ReaD Label INformation). Insert a RDLIN Card in the object program deck after the first EX Card (0126 in card columns 72-75). This RDLIN Card is exactly the same as the one used for the computer run to create or maintain the Interview Data Tape.

(d) Sense Switches

- (i) I/O and A-ON.

(4) Programmed Error Instructions

(a) Error 1 (ER01)

- (i) Printout: The Interview Accession Number of the erroneous input record being converted from the Interview Data Tape is printed. Also printed is a three digit number which identifies the high order position of the erroneous answer field within the input record.
- (ii) Condition: The erroneous field contains an invalid answer which does not appear as the entry argument in the appropriate conversion table.
- (iii) Programmed action: The erroneous field is not converted. Its contents are processed to the output tape without change.
- (iv) Corrective action: Correct the Interview Data Tape by running the program INTERVIEW DATA TAPE-CREATION AND MTCE (ME001). Repeat the run to pool interview answer categories.

# COMPUTER RUN TO PRINT CELL IDENTIFICATIONS AND FREQUENCIES IN DESCENDING SEQUENCE

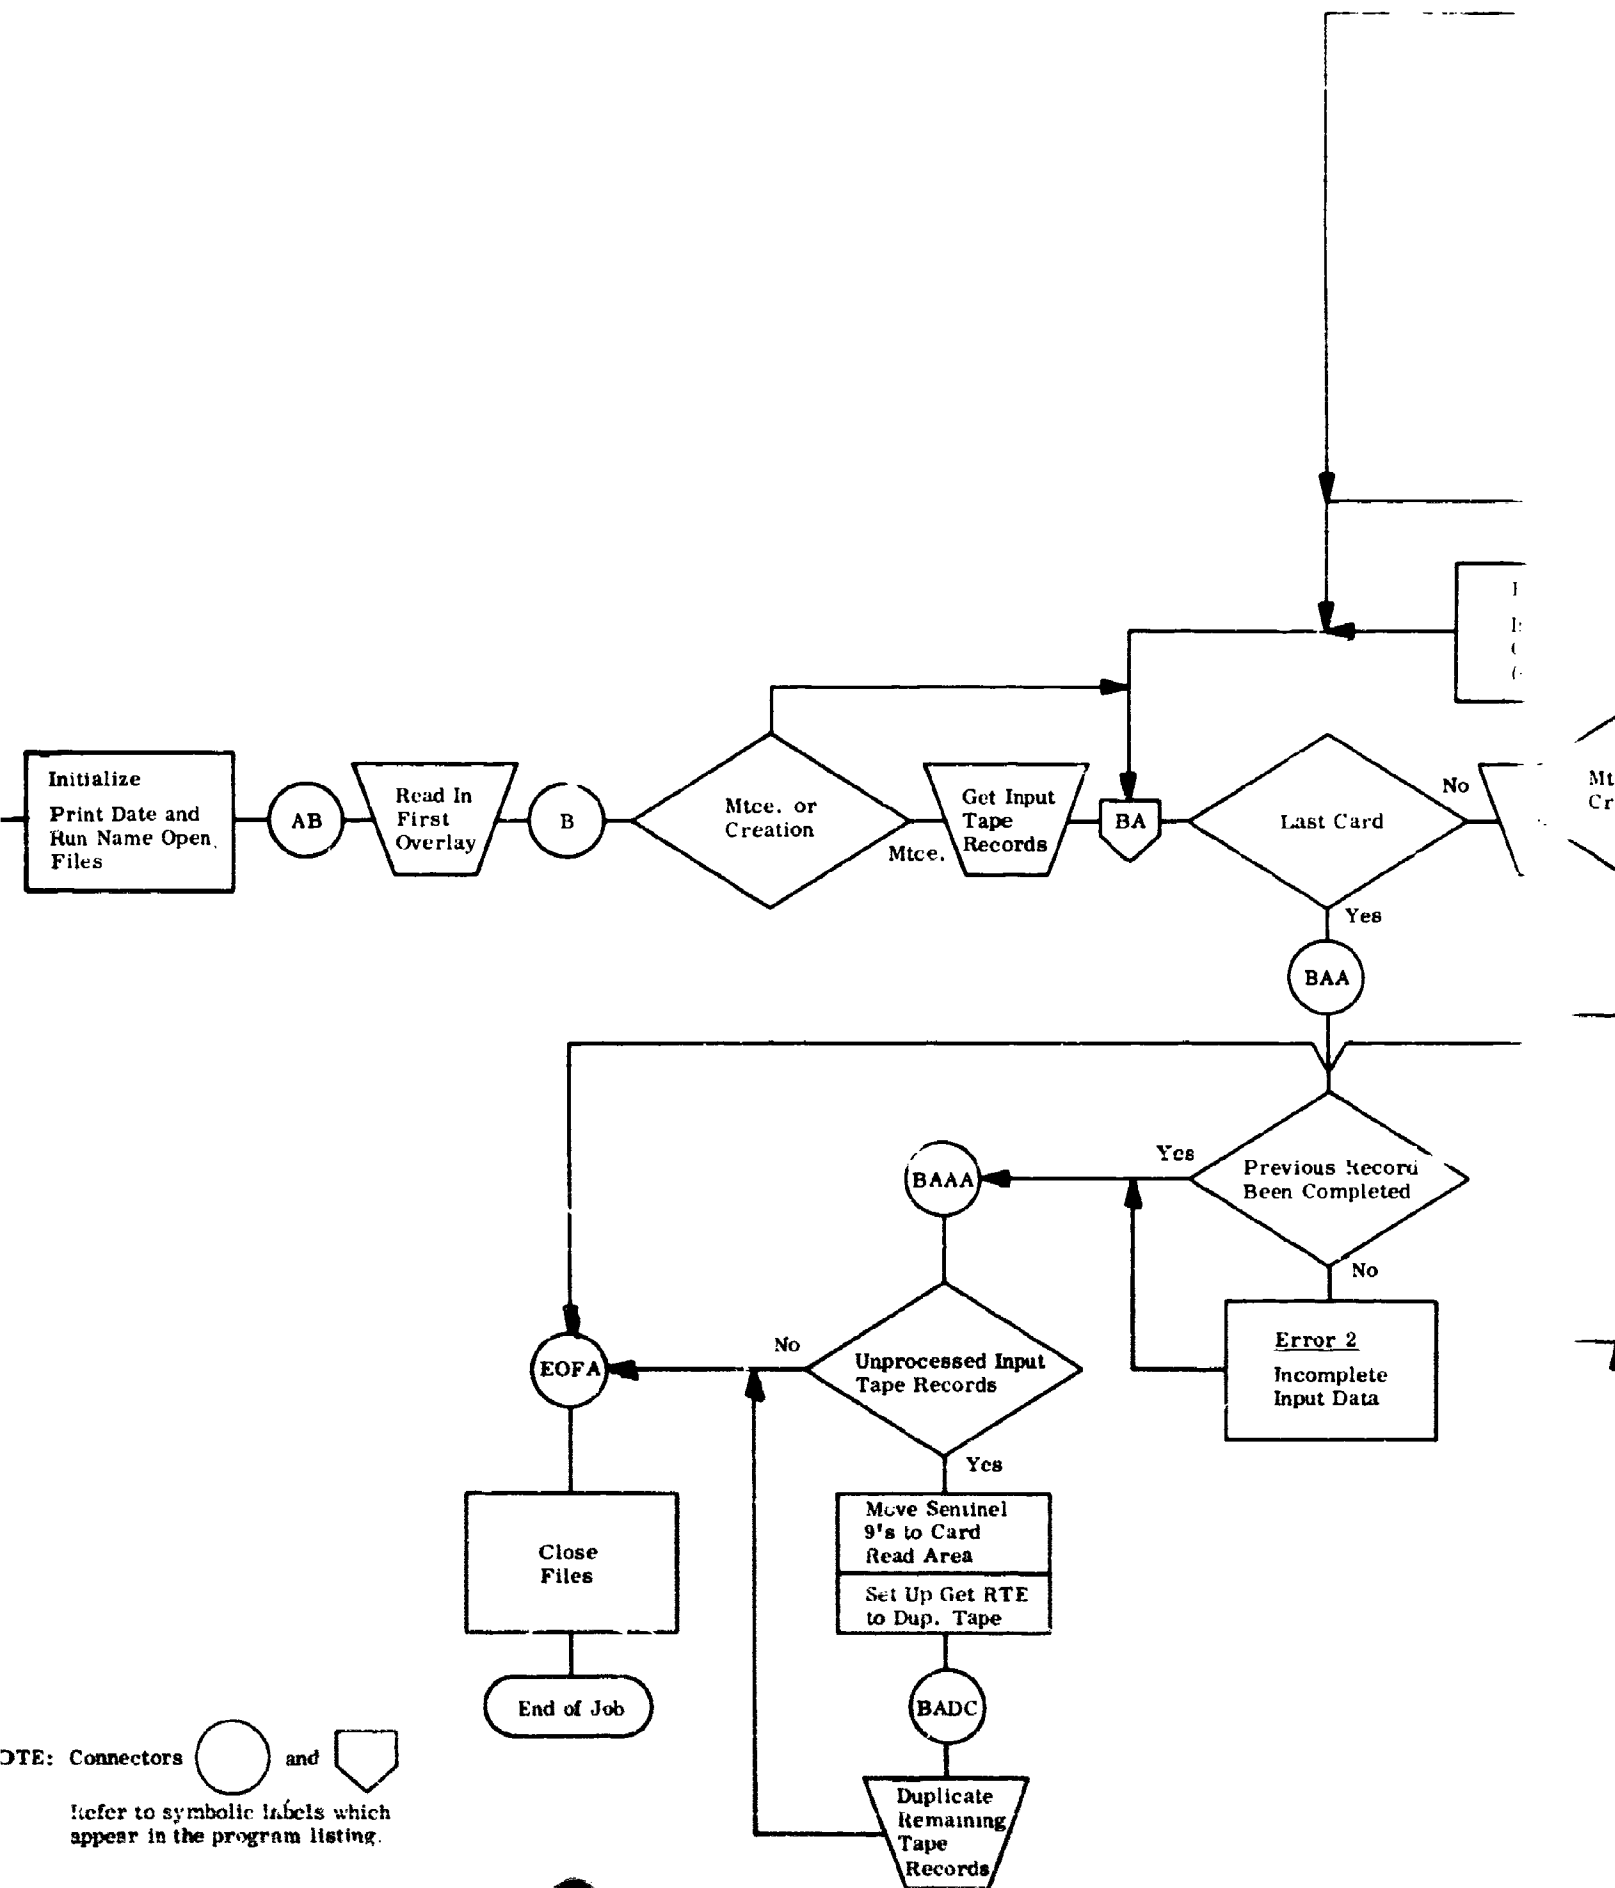

This program was developed to satisfy special printed output requirements limited exclusively to two-level frequency distribution inquiries. Briefly, using the two-level frequency distribution inquiry, the frequency with which each answer to a specified question occurs in conjunction with each answer to another specified question on the same interview, can be obtained. The response to the inquiry is printed out in matrix form. The answers to the first specified interview question are arrayed vertically down the left side of the matrix; the answers to the second specified interview question are arrayed horizontally across the top of the matrix. The frequency with which each conjunction of the answers to the two specified interview questions occurs is printed in the appropriate position of the matrix. Thus, the matrix presents a two-level frequency distribution of the answers that were actually given in interviews to the two specified questions.

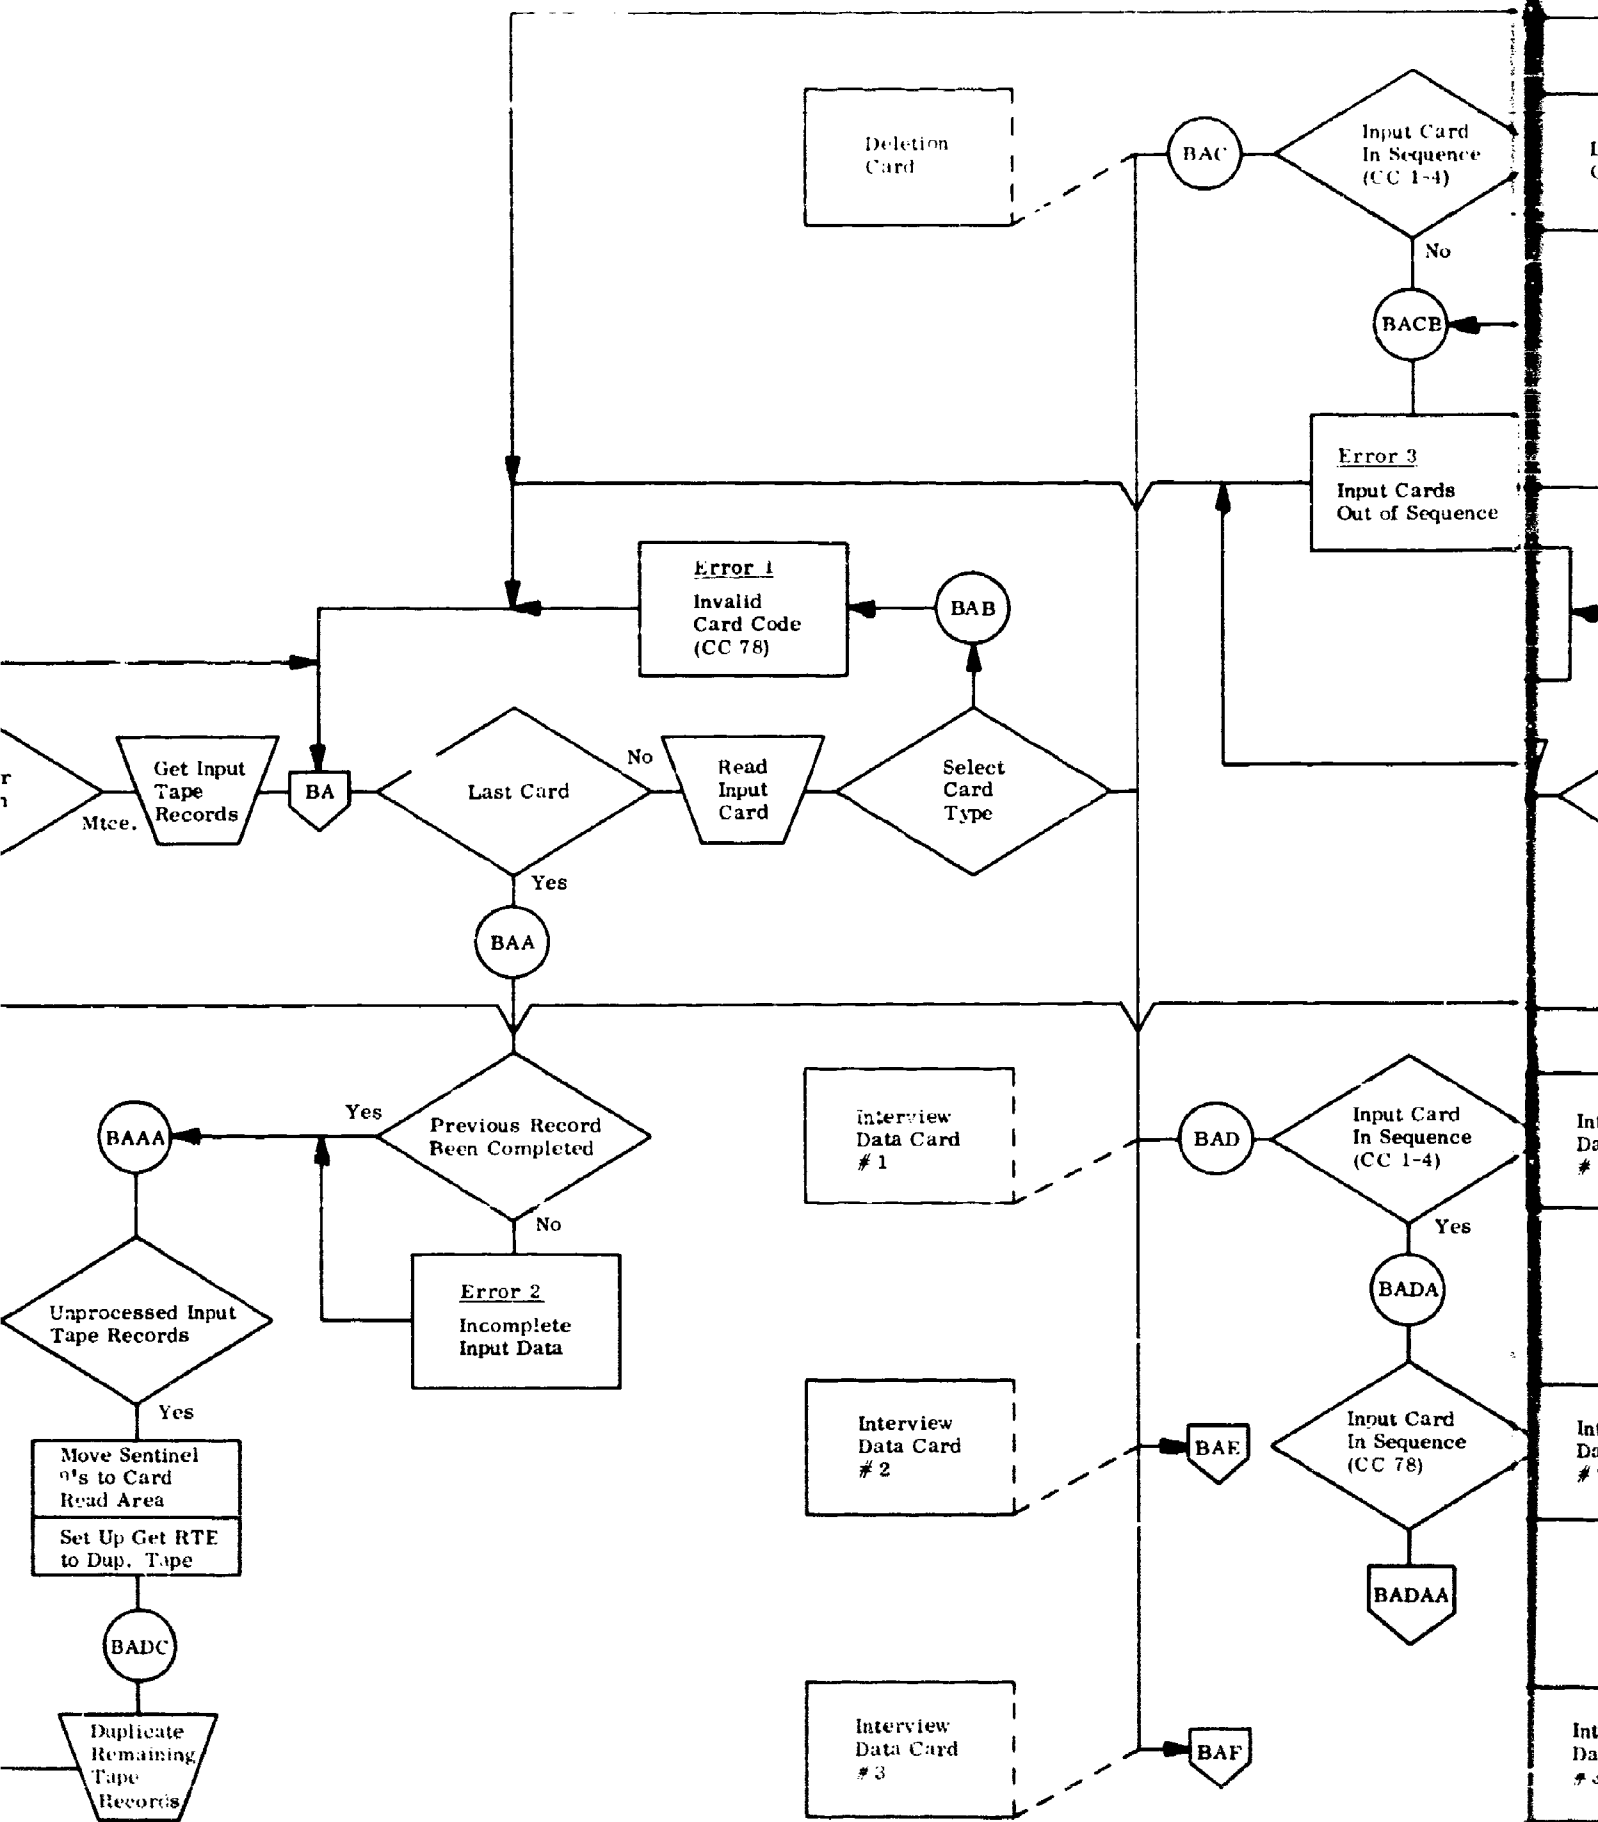

To facilitate analyzing the data presented in matrix form, it sometimes becomes desirable to rearrange the cells in descending order by frequency. Sometimes only those cells containing at least some minimum frequency are significant, and occasionally it is desirable to identify specifically cells containing a frequency of zero. This computer program provides for these analytical requirements. See Figure 5-8 for general logic flowchart.

## (1) Input Data Description

- (a) Inquiry Specification Cards - Printout is produced in response to an Inquiry Specification Card, the format of which follows (see Figure 5-9 for card layout):

<u>Card Column</u>	<u>Field</u>	<u>Explanation</u>
1-2	Interview Question Identification	A two-digit number to identify the first specified interview question. Right justify and fill high-order zero.
3-4	Interview Question Identification	Two digit number to identify the second specified interview question. Right justify and fill high-order zero.
5-8	Minimum Cell Frequency	Always numeric and right justified except for the code '9' in column 5 used only to suppress printing cell frequencies in descending sequence.

10-77		Always blank.
78-80	Card and Project Code	Autoduplicate "5ME".

(b) Tape Sorted Interview Date Analysis Tape

(2) Output Data Description

(a) Printed Listing of Cell Identifications and Frequencies in Descending Sequence - For each printed response to an Inquiry Specification Card, the following lines of information are printed (see Figure 5-10 for print format):

- (i) If identification and frequency of each cell containing at least a specified minimum frequency is requested,

Heading line: - This line contains the two Interview Question Identification numbers used to identify the inquiry. It also contains the specified minimum frequency to be used as the basis for selecting the cells for which the identification and frequencies are to be printed.

Data Lines: - For each cell selected, the following data are printed in descending order by cell frequency:

- Answer to first specified interview question (row identification in the matrix).
- Answer to second specified interview question (column identification in the matrix).
- Cell frequency

- (ii) If identification of each cell containing zero frequency is requested,

Heading line - This line contains the two Interview Question Identification numbers used to identify the inquiry and the notation "ZERO FREQUENCY."

Data lines - For each cell determined by the program to contain a zero frequency, the following data are printed in alphabetic or numeric sequence by the interview answers serving as row and column identifications in the matrix:

0										1										2										3										4													
1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4

(3) Computer Operator Instructions

(a) Program Title and Number

PRINT CELL IDENTIFICATIONS AND FREQUENCIES IN  
DESCENDING SEQUENCE, ME006.

(b) Tapes

- (i) Input - Sorted Interview Data Analysis Tape on Tape Drive 2.
- (ii) Output - Unreadable record dump tape in Tape Drive 1.

(c) Cards - Input

- (i) Date Card. Insert the Date Card in the object program deck before the first EX Card (0151 in card columns 72-75).
- (ii) Inquiry Specification Cards - Sort the Inquiry Specification cards on card columns 1-4.

Insert the Inquiry Specification cards after the third EX Card (0222 in card columns 72-75) of the object program deck.

These cards will fall into the normal stacker after they are read.

(d) Sense Switches

- (i) I/O and A-ON, for processing last tape reel of input file. This is the case when the input file is contained on one reel.
- (ii) I/O, A, and G-ON, for processing tape reels other than the last reel when there is a multi-reel input file. When each input reel is completed, the program rewinds and unloads the reel and halts to permit the operator to mount the next reel. When the operator mounts the last reel of the file, he must turn Sense Switch G Off. He must press START to continue the program.

PROGRAMMED ERROR INSTRUCTIONS(1) Error 1 (ER01)

- (a) Printout: Print contents of erroneous input card.
- (b) Condition: Card and project code, "5ME", are not punched in card columns 78-80.
- (c) Programmed action: The erroneous input card is not processed. The next card is read.
- (d) Corrective action: Correct the erroneous Inquiry Specification Card. Enter the corrected card in a subsequent run.

(2) Error 2 (ER02)

- (a) Printout: Same as for Error 1.
- (b) Condition: The matrix capacity of 34 columns for two-level frequency distributions is exceeded by the input tape record in process. This condition arises because at least one invalid answer was recorded for an interview question.
- (c) Programmed action: The inquiry whose responses exceed the matrix capacity is not processed and all input tape records relating to this inquiry are by-passed.
- (d) Corrective action: Run the program, FORMAT ANALYZED INTERVIEW DATA AND PRINT, ME005. Create a new Sorted Interview Data Analysis Tape in accordance with the corrective action prescribed for the errors disclosed in that run.

(3) Error 3 (ER03)

- (a) Printout: Same as for Error 1.
- (b) Condition: The matrix capacity of 34 rows for two-level frequency distributions is exceeded by the input tape record in process. This condition arises because at least one invalid answer was recorded for an interview question.
- (c) Programmed action: Same as for Error 2.
- (d) Corrective action: Same as for Error 2.

## SECTION VI. STATISTICAL TABLES

This Section contains the statistical tables developed during the survey. To aid in the analysis of the data, three types of tables have been used: one-way, two-way, and three-way tables.

Paragraph 6.3 contains the actual questions asked during the survey; a distribution of the answers are shown in one-way tables. It was found useful in some cases to pool the answers to several closely related categories within a question to present tabulated data that is in a more concise and comprehensible form. Where this has been done, both the pooled and unpooled distributions are shown. It is pointed out that the question numbering scheme in this Section and Appendix B (Volume I) is inconsistent with the question numbers used in the revised version of the interview guide handbook published on July 1, 1964. The numbering was changed prior to data compilation to simplify keypunching and computer operations.

Paragraph 6.4 contains the distribution of the answers to one question distributed within the answers to a second question; these are called two-way tables. In all cases, unless marked with a (u), which indicates the data is unpooled, the tables are based upon pooled data. Each two-way table is identified by a four-digit number in the upper left hand corner. The first two digits refer to the number of the first question, whose answer categories are listed vertically at the left of the table. The last two digits refer to the second question, whose answer categories are listed horizontally at the top of the tables. The reader should refer to the one-way tables in Paragraph 6.3 for the meaning of the letter-keys contained within the two-way tables. The reader is referred to Figure 6-1 for an explanation of how to interpret a two-way table.

Paragraph 6.5 contains three-way tables. These tables represent a cross distribution of the answers to three questions. The selected information is actually shown in a series of two-way tables, one for each category of the third question. The aforementioned comments on two-way tables are also applicable to the three-way tables. The only difference is that a separate two-way table is presented for each answer category of the third question, the answer category is identified in the title of each table in the series.

		Question 50		Do you use DDC (ASTIA)?					
		Yes		No					
		9-50	A	B	BLNK	RD DF	TOTAL		
Question 9 TYPE OF ACTIVITY	Detailed Scientific or Engineering	A	47 373 58	2 1 3	53 413 57		100	5 4 6	
	Technical Evaluation	B	52 206 32	48 192 26		1 17	100 399 29		
	Technical Administration	C	35 55 9	63 100 14	2 3 50		100 158 11		
	Other	D	19 6 1	75 24 3	6 2 33		100 32 2		
		RD DF							1
		TOTAL	47 640 100	53 729 100		6 100	100 1375 100		

#### EXPLANATION OF THE CALL OUTS

The three entries in each cell are as follows (refer to cell 9A-50A):

- ① 373 is the cell frequency; i.e., out of 1375 responses, 373 were in category A in question 9 and also in category A in question 50.
- ② 47 indicates that this cell contains 47 percent of all the entries for that row —  $(373/786 \times 100 = 47)$ .
- ③ 58 indicates that this cell contains 58 percent of all the entries for that column  $(373/640 \times 100 = 58)$ .

Similarly for row totals (refer to row 9A).

- ④ 786 is the sum of the cells in that row  $(373 + 413 = 786)$ .
- ⑤ 100 is the sum of the cell row-based percentages including round-off error which appears in the column (or row) marked RD DF.
- ⑥ This number indicates that 57 percent of the population  $(786/1375 \times 100 = 57)$  answered question 9 in category A—(Detailed Scientific or Engineering).

For Value of Questions (see upper left-hand corner).

- ⑦ Next to the question number is a one digit number set off by dashes (e.g., - 2 -). This number represents the composite evaluation which has been placed upon the reliability of the data contained in each table. A rating of - 1 - indicates that the quality of the data is excellent, whereas a rating of - 4 - indicates that the data has very marginal reliability.

Figure 6-1. Example of A Two-Way Table

## 6.1 SELECTION OF TABLES

All one-way tables prepared during the study are included in Paragraph 6.3. The two-way and three-way tables presented in this report have been chosen from approximately 600 tables and are those which are considered to be of primary interest.

The 600 or more tables analyzed during the survey were selected to test various hypotheses, jointly developed by AUERBACH and DOD, as to the possible relationship between the subjects of two or three questions. To aid in the development of these hypotheses, the questions were first classified into four categories; environment, response, performance, and narrative. The list of questions which fall within each category is shown in Figure 6-2. The hypotheses usually involved determining the existence of a relationship between the questions within one category to the questions within another category. In some cases cross distributions were also made within a given category. Some of these hypotheses and the results are discussed in Section III of Volume I. Supplementing and supporting Section III are the tables in Section VI, which include brief annotations based on an analysis of each table. A list of the two-way and three-way tables included in this section is given in Figure 6-3.

## 6.2 VALUE OF QUESTIONS

Next to the question number is a one-digit number set off by dashes (e. g., -2-). This number, which ranges from 1 through 4, represents a composite evaluation of the reliability or quality of the data contained in each two-way table. This evaluation was made by considering:

- (1) The success in communicating the intent of each question to the respondent and his ability to answer it.
- (2) The validity of the answers in terms of the objective of each question.
- (3) The extent to which the answer categories proved to be mutually exclusive and all inclusive.
- (4) The inherent subjectiveness of the question.

A value was assigned from the point of view of how well the question was implemented, i. e., how well the recorded responses accurately reflect the intent of the question; it does not reflect the value or rationale behind the question itself. The number 1 indicates that the question has a high value and the data is considered reliable and accurate. The value 4 indicates the opposite. In the case of a two- or three-way table, which may involve questions having different values, the lowest reliability or quality value has been assigned to the table.

<u>Environment</u> (Characteristics of Person or Task)	<u>Responses</u> (Information Required by Task)	<u>Performance</u> (Information Obtained)	<u>Narrative</u>
1	25	35	24
2	36	45	55
4	42	47

### QUESTION 31

- 3 -  
AT THE TIME THAT YOU OBTAINED THIS CHUNK OF INFORMATION,  
WOULD YOU HAVE PREFERRED THAT IT BE PRESENTED TO YOU IN  
ANY OTHER MEDIA OR IN ANY OTHER PHYSICAL ARRANGEMENT ?

#### POOLED

	<u>Frequency</u>	<u>Percent</u>
A. No, no preference	2153	46
B. Book bulletin, article and report	1027	22
C. Informal, oral — formal, oral briefing	410	9
E. Live demonstration, microfilm or microfiche, slides or motion pictures, correspondence and memos, other (specify)	1097	23
TOTAL	<u>4687</u>	

#### UNPOOLED

	<u>Frequency</u>	<u>Percent</u>
A. No, no preference	2153	46
B. Book, bulletin, article, report	1027	22
C. Informal, oral	329	7
D. Formal, oral briefing	81	2
E. Live demonstration	43	1
F. Microfilm or microfiche	20	-
G. Slides or motion pictures	12	-
H. Correspondence and memos	107	2
I. Other (specify)	121	3
Blk. Blank	<u>794</u>	17
TOTAL	4687	

QUESTION 3

- 2 -     ACTUAL EXPOSURE TO INFORMATION

		<u>Frequency</u>	<u>Percent</u>
A.	One item of available material which contains the information	1516	32
B.	A sampling	1599	34
C.	All the available material	752	16
D.	Nothing	36	1
Blk.	Blank	<u>784</u>	17
	TOTAL	4687	

QUESTION 33

- 2 -     DESIRED EXPOSURE TO INFORMATION

		<u>Frequency</u>	<u>Percent</u>
A.	One item of material	1611	34
B.	A sampling	1240	27
C.	All the available material	1050	22
Blk.	Blank	<u>786</u>	17
	TOTAL	4687	

QUESTION 34

- 2 -     SINCE YOU WANTED TO SEE A LOT OF INFORMATION,  
DO YOU THINK SEARCH AIDS WOULD BE USEFUL?

POOLED

		<u>Frequency</u>	<u>Percent</u>
A.	No, wanted to review all the material (explain)	263	6
B.	Title listings, abstracts, or both	466	10
F.	Already used either or both	155	3
X.	Blank	<u>3803</u>	81
	TOTAL	4687	

# QUESTION 34 (CONT'D)

## UNPOOLED

		<u>Frequency</u>	<u>Percent</u>
A.	No, wanted to review all the material (explain)	263	6
B.	Title listings	84	2
C.	Abstracts	64	1
D.	Both title listings and abstracts	311	7
E.	No preference	7	-
F.	Already used either or both	155	3
Blk.	Blank	<u>3803</u>	81
	TOTAL	4687	

# QUESTION 35

## ACTUAL RETRIEVAL TIME

## POOLED

		<u>Frequency</u>	<u>Percent</u>
A.	No or not applicable	351	7
B.	Less than one day	1676	36
C.	Less than one week	735	16
D.	Less than one month, less than three months, more than three months	895	19
G.	Received with task assignment	228	5
X.	Blank	<u>802</u>	17
	TOTAL	4687	

## UNPOOLED

		<u>Frequency</u>	<u>Percent</u>
A.	No or not applicable	351	7
B.	Less than one day	1676	36
C.	Less than one week	735	16
D.	Less than one month	492	10
E.	Less than three months	217	5
F.	More than three months	186	4
G.	Received with task assignment	228	5
Blk.	Blank	<u>802</u>	17
	TOTAL	4687	

QUESTION 36

DESIRED RETRIEVAL TIME

POOLED

	<u>Frequency</u>	<u>Percent</u>
A. No or not applicable	738	16
B. Less than one day	617	13
C. Less than one week	998	21
D. Less than one month, less than three months, more than three months	1315	28
G. Received with task assignment	212	5
X. Blank	<u>807</u>	17
TOTAL	4687	

UNPOOLED

	<u>Frequency</u>	<u>Percent</u>
A. No or not applicable	738	16
B. Less than one day	617	13
C. Less than one week	998	21
D. Less than one month	829	18
E. Less than three months	300	6
F. Over three months	186	4
G. Received with task assignment	212	5
Blk. Blank	<u>807</u>	17
TOTAL	4687	

QUESTION 38

- 2 -      DEPTH OF INFORMATION OBTAINED

	<u>Frequency</u>	<u>Percent</u>
A. Once over lightly of the subject	859	18
B. Detailed analysis	1994	43
C. Specific answer	1002	21
D. Nothing	42	1
Blk. Blank	<u>790</u>	17
TOTAL	4687	

QUESTION 39

- 2 -

DEPTH OF INFORMATION WANTED

	<u>Frequency</u>	<u>Percent</u>
A. Once over lightly of the subject	700	15
B. Detailed analysis	2152	46
C. Specific answer	1043	22
Blk. Blank	<u>792</u>	
TOTAL	4687	

QUESTION 40

- 3 -

ACTUAL PHYSICAL ARRANGEMENT OF INFORMATION

POOLED

	<u>Frequency</u>	<u>Percent</u>
A. Information not obtained	27	1
B. Narrative text, tables or lists, graphical- diagrams, drawings, schematics, flow charts; graphs, maps, photos, graphical and text, and graphical and lists.	1151	34
I. Other (specify)	1706	36
X. Blank	<u>1383</u>	30
TOTAL	4687	

UNPOOLED

	<u>Frequency</u>	<u>Percent</u>
A. Information not obtained	27	1
B. Narrative text	638	14
C. Tables or lists	385	8
D. Graphical diagrams, drawings, schematics, flow charts, graphs, maps	204	4
E. Photos	7	-
F. Graphical and text	263	6
G. Photos and text	40	1
H. Graphical and lists	34	1
I. Other combinations (explain)	1466	31
J. Other (specify)	240	5
Blk. Blank	<u>1383</u>	30
TOTAL	4687	

QUESTION 41

- 3 -      DESIRED PHYSICAL ARRANGEMENT OF INFORMATION

POOLED

		<u>Frequency</u>	<u>Percent</u>
A.	Information not obtained	93	2
B.	Narrative text, tables or lists, graphical diagrams, drawings, schematics, flow charts, graphs, maps, photos, graphical and text, graphical and lists	1662	35
I.	Other combinations (explain)	1806	39
Blk.	Blank	<u>1126</u>	24
	TOTAL	4687	

UNPOOLED

		<u>Frequency</u>	<u>Percent</u>
A.	Information not obtained	93	2
B.	Narrative text	685	15
C.	Tables or lists	402	9
D.	Graphical diagrams, drawings, schematics, flow charts, graphs, maps	211	5
E.	Photos	5	-
F.	Graphical and text	282	6
G.	Photos and text	38	1
H.	Graphical and lists	39	1
I.	Other combinations (explain)	1112	24
J.	Other (specify)	694	15
Blk.	Blank	<u>1126</u>	24
	TOTAL	4687	

QUESTION 42

- 1 -

FIRST SOURCE

POOLED

		<u>Frequency</u>	<u>Percent</u>
A.	Received with task assignment	496	11
B.	Supervisor (if given by supervisor after assignment), assignment to subordinate	268	6
E.	Consultants (outside), colleague	1027	22
F.	Librarian or technical researcher, library (search by self)	243	5
H.	Department bookcase or files	608	13
I.	Own collection	820	17
J.	Information or data centers	19	0
K.	Manufacturer or supplier	215	5
L.	Blank	<u>991</u>	21
	<b>TOTAL</b>	<b>4687</b>	

UNPOOLED

		<u>Frequency</u>	<u>Percent</u>
A.	Received with task assignment	496	11
B.	Supervisor (if given by supervisor after assignment)	93	2
C.	Assignment to subordinate	175	4
D.	Consultants (outside)	55	1
E.	Colleague	972	21
F.	Librarian or technical researcher	37	1
G.	Library (search by self)	206	4
H.	Department bookcase or files	608	13
I.	Own collection	820	17
J.	Information or data centers	19	-
K.	From manufacturer or supplier	215	5
L.	Other (specify)	205	4
Blk.	Blank	<u>786</u>	17
	<b>TOTAL</b>	<b>4687</b>	

QUESTION 43

- 3 -      WHAT WAS THE REASON FIRST SOURCE WAS USED ?

POOLED

		<u>Frequency</u>	<u>Percent</u>
A.	Received with task assignment	534	11
B.	Most authoritative, only source known, availability, found helpful previously	1989	42
E.	Recalled from mind that specific chunk was available from this source	1119	24
G.	Blank	<u>1045</u>	22
TOTAL		4687	

UNPOOLED

		<u>Frequency</u>	<u>Percent</u>
A.	Received with task assignment	534	11
B.	Most authoritative	806	17
C.	Only source known	180	4
D.	Availability (handy), easy to use	702	15
E.	Recalled from mind that specific chunk was available from this source	1119	24
F.	Found helpful previously	301	6
G.	Other (specify)	263	6
Blk.	Blank	<u>782</u>	17
TOTAL		4687	

QUESTION 45

- 1 -      WHAT INFORMATION WAS OBTAINED FROM FIRST SOURCE ?

		<u>Frequency</u>	<u>Percent</u>
A.	All the information	1821	39
B.	Part of the information	1688	36
C.	Reference to further information	307	7
D.	Nothing	86	2
Blk.	Blank	<u>785</u>	17
TOTAL		4687	

QUESTION 46

- 2 -

NEED FOR INFORMATION CHUNK

		<u>Frequency</u>	<u>Percent</u>
A.	Absolutely essential	3064	65
B.	Could have completed task without it	619	13
Blk.	Blank	<u>1004</u>	21
	TOTAL	4687	

QUESTION 47

- 1 -

USE OF INFORMATION CHUNK

		<u>Frequency</u>	<u>Percent</u>
A.	Directly in the task	3142	67
B.	As background information	730	16
C.	As a lead to other information	7	-
D.	Not at all	23	-
E.	Other (specify)	12	-
Blk.	Blank	<u>773</u>	16
	TOTAL	4687	

QUESTION 48

- 1 -

DID YOU FIND POST TASK INFORMATION?

		<u>Frequency</u>	<u>Percent</u>
A.	Yes (explain)	173	13
B.	No	1148	83
Blk.	Blank	<u>54</u>	4
	TOTAL	1375	

QUESTION 49

- 2 - HOW OFTEN DO YOU SEE OR READ TAB?

POOLED

	<u>Frequency</u>	<u>Percent</u>
A. Almost every issue	280	20
B. Once every two or three months; no more than once every six months	304	22
D. Never read TAB; does not know of TAB; Blank	791	58
TOTAL	1375	

UNPOOLED

	<u>Frequency</u>	<u>Percent</u>
A. Almost every issue	280	20
B. Once every two or three months	122	9
C. No more than once every six months	182	13
D. Never read TAB	248	18
F. Does not know of TAB	531	39
Blnk. Blank	12	1
TOTAL	1375	

QUESTION 50

- 2 - DO YOU USE DDC ?

	<u>Frequency</u>	<u>Percent</u>
A. Yes (skip to question 52)	640	47
B. No	729	53
Blnk. Blank	6	-
TOTAL	1375	

### QUESTION 51

#### - 3 - REASON DDC NOT USED

##### POOLED

	<u>Frequency</u>	<u>Percent</u>
A. Does not know of DDC	286	21
B. Physical location, red tape, security,time, poor previous results	43	3
F. Not relevant	169	12
H. Other (explain)	232	17
X. Blank	<u>645</u>	47
TOTAL	1375	

##### UNPOOLED

	<u>Frequency</u>	<u>Percent</u>
A. Does not know of DDC	286	21
B. Physical location	1	-
C. Red tape	5	-
D. Security	2	-
E. Time (too long to obtain information)	30	2
F. Not relevant	169	12
G. Poor previous results	5	-
H. Other (explain)	232	17
Blk. Blank	<u>645</u>	47
TOTAL	1375	

### QUESTION 52

#### - 2 - DO YOU USE SPECIALIZED INFORMATION CENTERS ?

	<u>Frequency</u>	<u>Percent</u>
A. Yes (record names) skip to question 54	750	55
B. No	604	44
Blk. Blank	<u>21</u>	2
TOTAL	1375	

QUESTION 53

- 3 -

REASON INFORMATION CENTERS ARE NOT USED

POOLED

		<u>Frequency</u>	<u>Percent</u>
A.	Do not know of such centers	255	19
B.	Physical location, red tape, security, time, poor previous results	15	1
F.	Not relevant	184	13
H.	Other (explain)	150	11
X.	Blank	<u>771</u>	56
TOTAL		1375	

UNPOOLED

		<u>Frequency</u>	<u>Percent</u>
A.	Do not know of such centers	255	19
B.	Physical location	-	-
C.	Red tape	1	-
D.	Security	-	-
E.	Time (too long to obtain infor- mation)	13	1
F.	Not relevant	184	13
G.	Poor previous results	1	-
H.	Other (explain)	150	11
Blk.	Blank	<u>771</u>	56
TOTAL		1375	

QUESTION 54

- 1 - USE OF TRANSLATIONS

		<u>Frequency</u>	<u>Percent</u>
A.	Yes	764	56
B.	No	603	44
Blk.	Blank	<u>8</u>	
TOTAL		1375	

QUESTION 56

- 2 -

DID YOU HAVE ANY SERIOUS TROUBLE OBTAINING  
OR LOCATING TECHNICAL INFORMATION IN ORDER TO PERFORM OR  
CONCLUDE THESE TASKS?

	<u>Frequency</u>	<u>Percent</u>
A. Yes	370	27
B. No	921	67
Blk. Blank	<u>84</u>	6
TOTAL	1375	

QUESTION 59

- 2 - NEED FOR EXTERNAL INFORMATION

	<u>Frequency</u>	<u>Percent</u>
A. Has a very large need for external technical information	443	32
B. Has moderate need for external	597	43
C. Has an insignificant need for external technical information	330	24
Blk. Blank	<u>5</u>	-
TOTAL	1375	

QUESTION 93

- 2 -

INTELLECTUAL REQUIREMENTS OF TASK

Categories 1 through 4 represent an evaluation as to how well the specific task would fit into a man-machine relationship in the sense that the task might have been programmed and accomplished in some automated fashion. One of the key factors in making this evaluation is to determine the professional knowledge or intellect needed to perform the task.

	<u>Frequency</u>	<u>Percent</u>
1. Possibly mechanical — low intellect	50	4
2. Difficult to mechanize — some intellect	430	31
3. Very difficult to mechanize — considerable intellect required	767	56
4. Impossible to mechanize — great intellect required	70	5
Blk. Blank	<u>58</u>	4
TOTAL	1375	

QUESTION 94

- 1 - NATURE OF TASK OUTPUT

		<u>Frequency</u>	<u>Percent</u>
A.	Concepts	46	3
B.	Costs and funding, administrative action	137	10
C.	Designs or design techniques	211	15
D.	Experimental processes and procedures	63	5
E.	Mathematical aids and formulae, computer programs	94	7
F.	Performance and characteristics	239	17
G.	Production processes and procedures	22	2
H.	Raw data	34	2
I.	Specifications	68	5
J.	Technical status	63	5
K.	Test processes and procedures	66	5
L.	Utilization	23	2
M.	Other, blank	75	5
N.	Evaluation	<u>234</u>	17
	TOTAL	1375	

QUESTION 95

- 1 - TIME SINCE TASK WAS COMPLETED

		<u>Frequency</u>	<u>Percent</u>
007.	1 week	291	21
014.	2 weeks	89	6
030.	1 month	164	12
060.	2 months	95	7
120.	4 months	35	3
999.	Over 4 months	17	1
Blank.	Blank	<u>684</u>	50
	TOTAL	1375	

## 6.4 TWO-WAY TABLES

0109 - 1 - MIL/GS RATING vs. TYPE OF ACTIVITY

Using the chi squared test with the null hypothesis that a person's rating is independent of his type of activity, it was found that at the five percent confidence level the hypothesis should be rejected. The table shows that people of a GS13, 0004 rating and below tend to be of a detailed scientific and engineering type, whereas above this they tend to be either of a technical evaluation or technical administration type.

Using the chi squared test with the null hypothesis that a person's rating is independent of his use of DDC, it was found that at the five percent confidence level the hypothesis should be rejected. The table shows that higher rated people tend to use DDC and lower rated people do not.

30. If question 29 is No, what are the media or persons you habitually use?  
(Indicate chunk by number.)

I \_\_\_\_\_

II \_\_\_\_\_

III \_\_\_\_\_

IV \_\_\_\_\_

V \_\_\_\_\_

31. At the time you obtained this (name of info chunk) would you have preferred it presented to you in any other media or in any other physical arrangement? (Show list per instructions.)

- A. No, or No preference
- B. Book, bulletin, article, report
- C. Informal oral
- D. Formal oral briefing
- E. Live demonstration
- F. Microfilm or microfiche
- G. Slides or motion pictures
- H. Correspondence and memos
- I. Other (Specify) \_\_\_\_\_

I	II	III	IV	V

32. Concerning the total amount of material potentially available to you which contains information on this chunk, how much of it were you actually exposed to? (A) one item of the available material which contains the information, (B) a sampling of the available material potentially containing information on this chunk, (C) all the available material potentially containing information on this chunk, (D) nothing.

--	--	--	--	--

33. Concerning the total amount of material available which potentially contains information on this chunk, how much of it did you want to be exposed to? (A) one item of the available material which contains the information, (B) a sampling of the available material potentially containing information on this chunk, (C) all the available material potentially containing information on this chunk.

--	--	--	--	--

Note to Interviewer: If either of the previous two questions imply a large amount of material, ask the following question:

34. Since you wanted to see a lot of material, would you have found title listings or abstracts useful to read first in order to help you select the chunk material to read in detail?

A. No, wanted to review all the material, explain  
B. Title listings  
C. Abstracts  
D. Both title listings and abstracts  
E. No preference  
F. Already used either or both

I	II	III	IV	V

35. From the time you requested this chunk or started to search for it, what was the actual time it took to GET it?

--	--	--	--	--

36. From the time you requested this chunk or started to search for it, was there a maximum time you could have allowed to get it?

A. No or Not applicable  
B. Under one day  
C. Under one week  
D. Under one month  
E. Under three months  
F. Over three months  
G. Received with task assignment

--	--	--	--	--

- \* 37. I want to ask you about how up-to-date you wanted this information. Did you have to have this (name of info chunk) so up to date that it needed to contain inputs a few days after they were discovered or produced by the originating person?

- DELETED -

A. Yes  
B. No  
C. Info never found

--	--	--	--	--

38. Now I would like to ask you about the depth of (name of info chunk) you RECEIVED. Did you GET a: (A) once over lightly of the subject, (B) detailed analysis, (C) specific answer, (D) nothing.

--	--	--	--	--

39. At the time you recognized the need for (name of info chunk), did you WANT an (A) once over lightly of the subject, (B) detailed analysis, or (C) specific answer?

--	--	--	--	--

\* This question was deleted because of difficulty encountered in conveying the concept of age of information to the respondents.

(Note: Ask the next question only if the info chunk inputs were written.)

40. How was this chunk of information laid out when you got it (name of info chunk)?

I	II	III	IV	V

41. At the time you requested the chunk of information, how would you have liked it to be laid out? (Show list.)

--	--	--	--	--

- |  |                                 |
|--|---------------------------------|
| A. Info not obtained   | E. Photos                       |
| B. Narrative text  | F. Graphical and text           |
| C. Tables or lists   | G. Photos and text              |
| D. Graphical — diagrams, drawings, schematics, flow charts, graphs, maps | H. Graphical and lists          |
|  | I. Other combinations (explain) |
|  | J. Other (specify)              |

You may have had to go to several sources or places before you found this (name of info chunk). In the next few questions, I would like to talk only about the first of these sources.

42. What was the first organization or person you went to in order to obtain this information?

- |  |                                   |
|--|-----------------------------------|
| A. Received with task assignment — (even if given by Supervisor initially) | G. Library — search by self       |
| B. Supervisor — (if given by Supervisor after assignment)                  | H. Departmental bookcase or files |
| C. Assignment to subordinate   | I. Own Collection                 |
| D. Consultants (outside)   | J. Information or data centers    |
| E. Colleague   | K. From manufacturer or supplier  |
| F. Librarian or technical researcher                                       | L. Other (specify)                |

--	--	--	--	--

43. What was the principal reason you used this first source?

--	--	--	--	--

- |                                       |   |
|---------------------------------------|---|
| A. Received with task assignment      | E. Recalled from mind that specific chunk was available from this source. |
| B. Most authoritative                 | F. Found helpful previously   |
| C. Only source known                  | G. Other (specify)  |
| D. Availability (handy), easy to use. |   |

44. (If first source was a person) What were the words you used to express your interrogation of this first source of information?

(If first source was an object) Exactly what were the questions you formed in your mind to interrogate this first source of information?

I \_\_\_\_\_

II \_\_\_\_\_

III \_\_\_\_\_

IV \_\_\_\_\_

V \_\_\_\_\_

45. What did you get from this first source. (A) All the information needed for this chunk, (B) Part of the information, (C) Reference to further information, or (D) Nothing?

I	II	III	IV	V
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Note to Interviewer: The next two questions are not concerned with the first source any longer; they refer to the whole chunk.

46. Was this chunk (A) absolutely essential to the conclusion of the task or (B) could you somehow have completed the task without it?

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--------------------------	--------------------------	--------------------------	--------------------------	--------------------------

47. Was the chunk of info used: (A) Directly in the task, (B) As background information, (C) A lead to other information, (D) Not at all or (E) Other (explain) ?

I	II	III	IV	V
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

---

Note to Interviewer: Return to page 5 and repeat the same question for each information chunk.

Note to Interviewer: The following question refers back to the task.

48. After the task was completed, did you find any information that was available but unknown to you at the time you were doing the task ?

A. Yes (explain)  
B. No

☐

- 
95. Number of days since this task was completed.

☐

**PART III**

**UTILIZATION OF INFORMATION CENTERS**

49. How often do you see or read TAB ?

- |                                     |                         |
|-------------------------------------|-------------------------|
| A. Almost every issue               | D. Never read TAB       |
| B. Once every 2 or 3 months         | E. Does not know of TAB |
| C. No more than once every 6 months |                         |

☐

50. Do you use DDC (ASTIA) ?

- A. Yes (explain) (skip to question 52)  
B. No

☐

51. Why do you not use DDC ?

- |                         |                                   |
|-------------------------|-----------------------------------|
| A. Does not know of DDC | E. Time (too long to obtain info) |
| B. Physical location    | F. Not relevant                   |
| C. Red tape             | G. Poor previous results          |
| D. Security             | H. Other (explain)                |

☐

52. Do you USE any of the DOD specialized information and/or data centers such as shown on this list?

- A. Yes (Record names) (skip to question 54)  
B. No

☐

53. Why do you not use any of these kinds of centers ?

- |                                |                                   |
|--------------------------------|-----------------------------------|
| A. Do not know of such centers | E. Time (too long to obtain info) |
| B. Physical location           | F. Not relevant                   |
| C. Red tape                    | G. Poor previous results          |
| D. Security                    | H. Other (explain)                |

☐

54. Have you ever used English translations or English abstracts of foreign literature ?

- A. Yes  
B. No

☐

55. What is your usual source for obtaining these translations ?

**PART IV**

**GENERAL INFORMATION PATTERNS**

Now we are going to look at all the tasks you have worked on over the last year. For the following questions, would you generalize about the technical information requirements you had on these tasks?

56. Did you have any serious trouble obtaining or locating technical information in order to perform or conclude these tasks?

- A. Yes (ask questions 57 and 58)  
B. No

☐

57. Please explain the difficulty.

---

---

---

---

58. Could you offer a possible solution to this problem?

---

---

---

---

Note to Interviewer: Return to page 1 to complete the respondent's profile.

**PART V**

**SUBJECTIVE COMMENTS**

59. How would you summarize the respondent in relation to external STINFO needs:

- A. Has a very large need of external STINFO  
B. Has moderate need of external STINFO  
C. Has insignificant need of external STINFO

☐

60. Any other opinions of respondent's STINFO patterns: \_\_\_\_\_

---

---

---

## SECTION V. COMPUTER PROGRAM DOCUMENTATION

### 5.1 SUMMARY OF COMPUTER SYSTEM

To compile and analyze the source data developed during the main survey, AUERBACH prepared a number of computer programs which are documented in this Section.

The general system used to compile, analyze, and print out specific analyses of interview data is illustrated by the flow chart shown in Figure 5-1. This system consists of six basic programs which are outlined in the following description.

- (1) Computer Run to Create and Maintain the Interview Data Tape. Interview data reduced to punch card form can be converted to magnetic tape form. Data from these cards is used to create the original Interview Data Tape, and subsequent data on punched cards can be used to update the tape. Data for an entire interview may be deleted from the tape by using a card punched with a deletion code and the interview accession number.
- (2) Computer Run to Analyze Data on the Interview Data Tape According to Specified Interview Questions. Question specifications are submitted on punched cards. These inquiry cards and the Inquiry Data Tape are then used to produce the Interview Data Analysis Tape, which contains data extracted from the Interview Data Tape according to the specifications in the inquiry cards.
- (3) Computer Run to Sort the Interview Data Analysis Tape. The records on the Interview Data Analysis Tape are sorted to facilitate frequency calculations and formatting for the printing of results.
- (4) Computer Run to Format Analyzed Interview Data and to Print. Records from the Sorted Interview Data Analysis Tape are counted, various calculations performed, and results formatted in computer memory until they are printed.
- (5) Computer Run to Print Cell Identifications and Frequencies in Descending Sequence. Records from the Sorted Interview Data Analysis Tape related to two-level frequency distribution inquiries are processed to list frequencies of conjunction of interview answers in descending order by frequency.

A

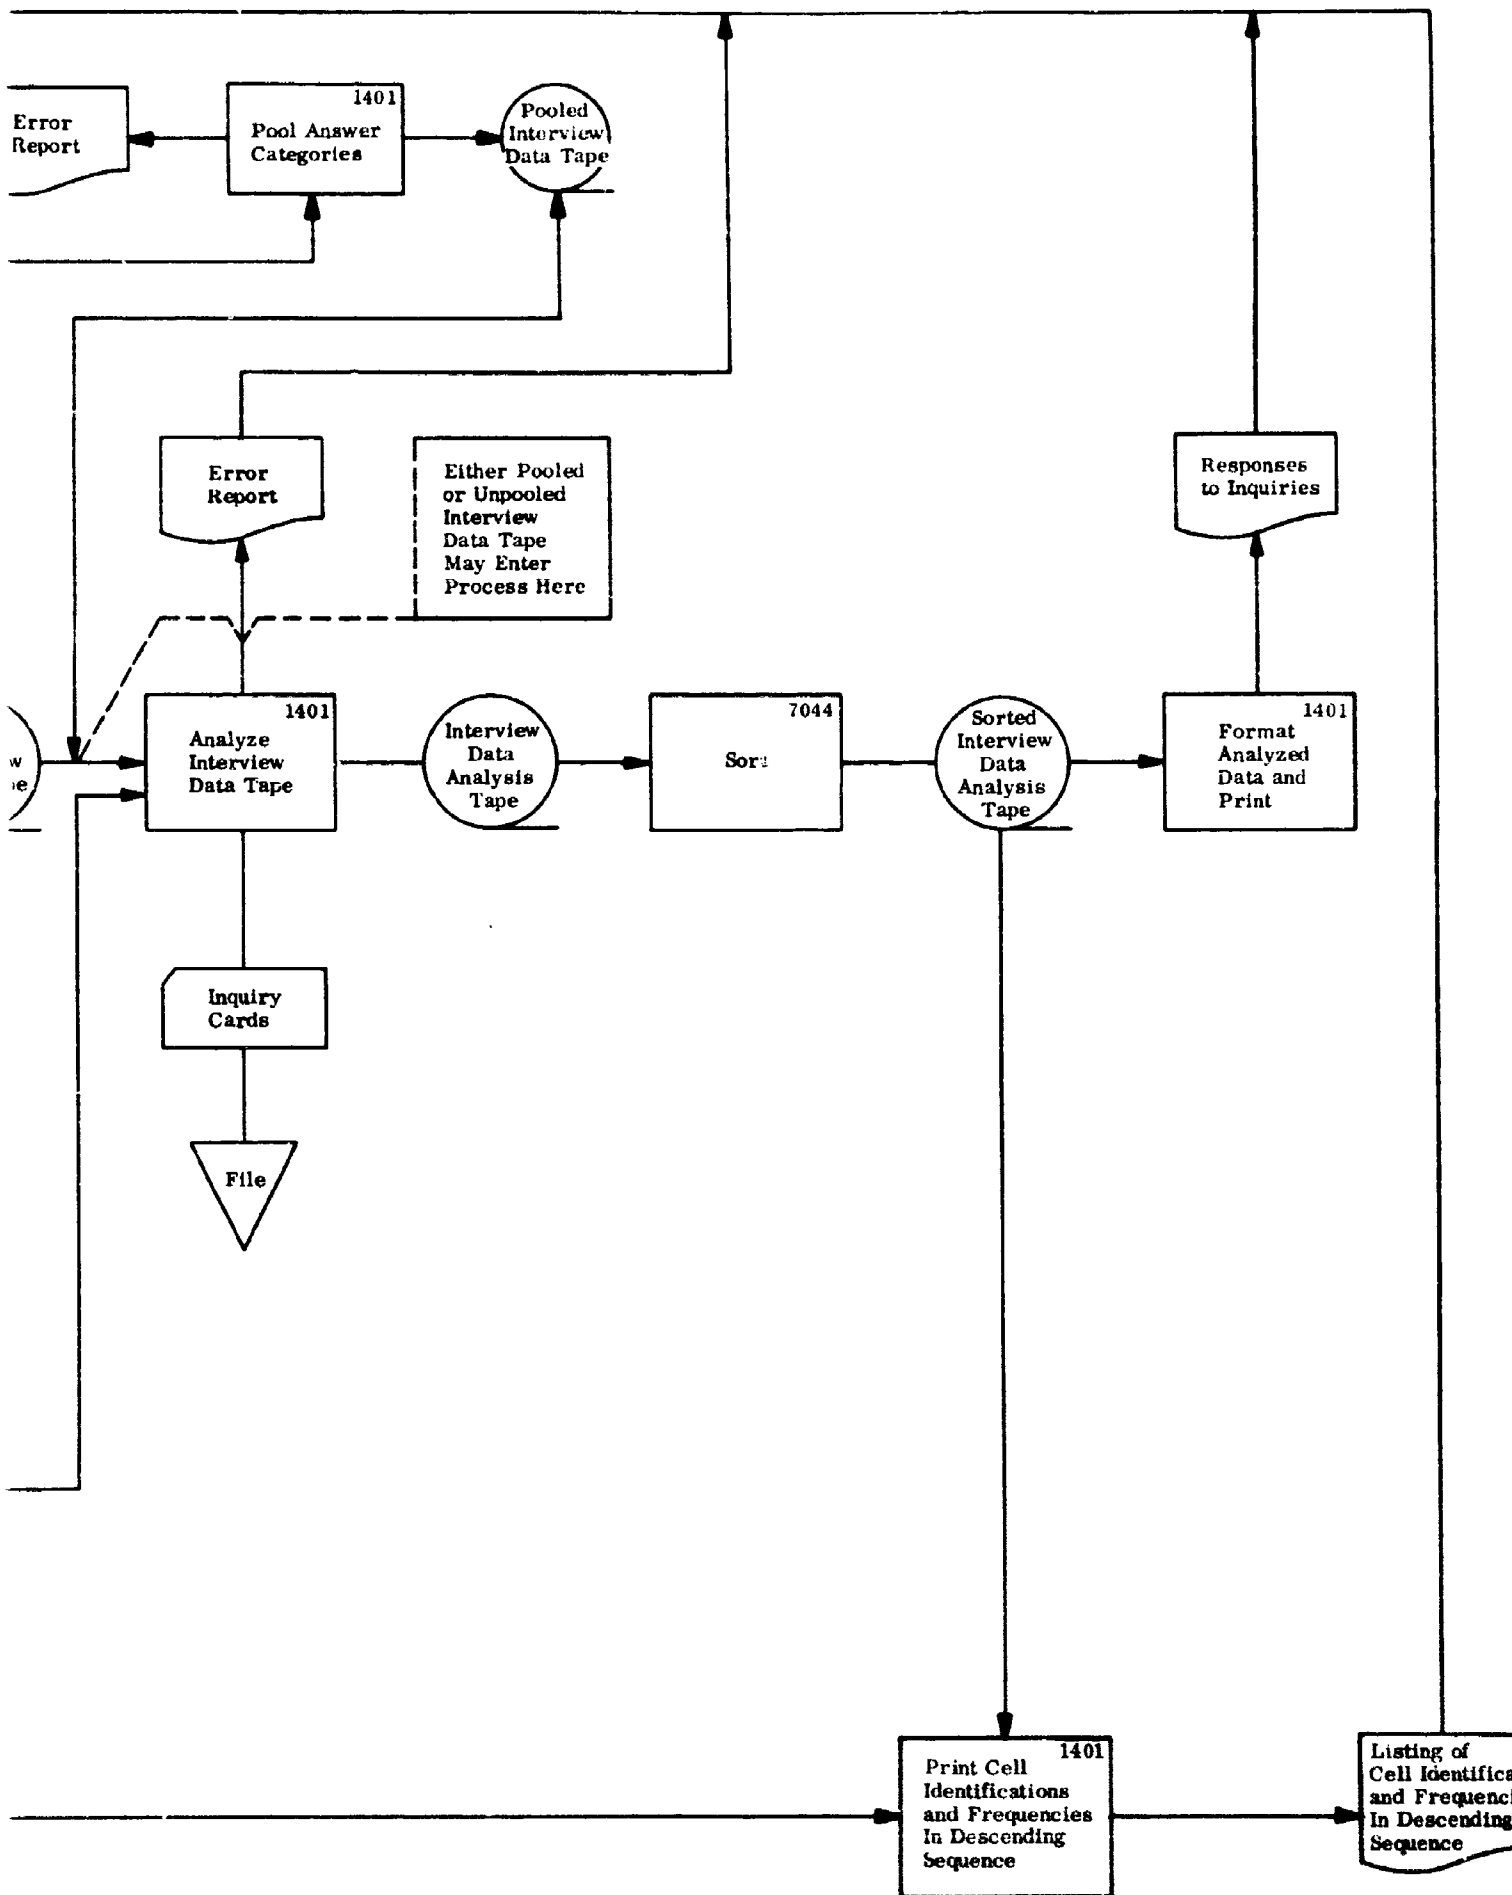

Figure 5-1. DOD Study - System Flow

- (6) Computer Run to Pool Interview Answer Categories.  
Answers for some interview questions are taken from the Interview Data Tape and combined into more general categories on the Pooled Interview Data Tape. The answers to the other interview questions are merely duplicated on the Pooled Interview Data Tape.

## 5.2 APPROACH TO DOCUMENTATION

For each program written, the documentation described herein includes a definition of the input, the computer operating instructions, and a definition of the output. Program listings as well as source and object program decks for all programs have been submitted to DOD.

The programs used in this study were written for the IBM 1401 computer. Standard IBM 1401 Autocoder and Input-Output Control System (IOCS) software was used. Error conditions detected by program instructions generated by the Autocoder and IOCS must be resolved according to the procedures set forth in IBM's documentation of its Autocoder and IOCS.

Tape sorting for this study can be done on any device which can accept an IBM magnetic tape with blocks of 80 records, each record 24 characters long. However, sorting is planned for the IBM 7044, using the IBM 7044 Generalized Sorting System (the documentation for this sorting program is available from IBM).

## 5.3 COMPUTER OPERATOR INSTRUCTIONS

The operator instructions for each IBM 1401 program covered in this report include only those instructions peculiar to the particular program. All programs can run on an IBM 1401 computer having 16,000 positions of core, three tape drives, advanced programming, modify address feature, high-low-equal-compare, a 1403 Printer, and a 1402 Card Read Punch. Instructions for setting up the computer for all IBM 1401 programs, other than specific exceptions, follow.

### (1) Cards

- (a) Object Program Deck - All object programs are in card decks. The cards of each object program deck fall in the normal stacker after they are read.

The five-character program identification code is contained in card columns 76-80.

Each object program deck is sequenced by card columns 72-75.

- (b) Date Card - A standard IOCS date card, which loads a five-digit date into computer memory positions 195 - 199, is inserted before the first EX card of the object program deck. This card falls into the normal stacker after it is read.

Card columns

Punched Data

1-3  
4-5  
40-71

Day  
Year  
L005199N000000N000000N000000104

(2) Printer

- (a) Form - Stock paper (12 7/8 x 11 inches) is used.
- (b) Carriage Control Tape - Channel 1 must be punched.
- (3) Load and Start Routine - Normal.
- (4) End-of-Job Indication - A programmed halt with '999' in both A and B address registers and with "END OF JOB" printed out indicates end of job.
- (5) Sense Switches - Only the interrogated sense switch settings are listed. Those sense switch settings not listed are not interrogated.

#### 5.4 COMPUTER RUNNING TIME

The running times shown in Table 5-1 are based on the following machine configurations:

- (1) The Interview Data Tape (ME002) and the Pooled Interview Data Tape (ME005) are written at 556 characters per inch.
- (2) The tapes used in running the programs to create and maintain the Interview Data Tape (ME001) and to pool interview answer categories (ME005) are mounted on IBM 729 Model II Tape Drives.
- (3) The Interview Data Analysis Tapes, both sorted and unsorted, are written having 800 characters per inch.
- (4) In the program to analyze data on the Interview Data Tape (ME002), the input tape is mounted on an IBM 729 Model II Tape Drive, and the output tape (Interview Data Analysis Tape) is mounted on an IBM 729 Model V Tape Drive.

- (5) For sorting, a four-way merge is used on a two-channel, IBM 7044. All working tapes are mounted on IBM 729 Model VI Tape Drives set with writing at 800 characters per inch.
- (6) In the program to format and print the analyzed interview data, the Sorted Interview Data Analysis Tape is mounted on an IBM 729 Model V Tape Drive. The IBM 1403 Printer is equipped with the print storage feature.

Running time experience for the program to create the Interview Data Tape (ME001) is expressed in terms of output tape records produced per minute as shown in Table 5-1. Each output tape record consists of data from three input cards.

Running time experience for the program to pool answer categories (ME005) is also expressed in terms of output tape records produced per minute. Each output tape record is produced from a single input tape record.

For the programs to analyze (ME002), sort, format, and print (ME004), the timings are based on the use of an Interview Data Tape of 1,375 interview records. The running time experience is expressed in terms of minutes required to process each inquiry element. An inquiry element is each interview question specified for an inquiry. Each inquiry has from one to three elements (i.e., specified interview questions).

TABLE 5-1. COMPUTER RUNNING TIME EXPERIENCE

	<u>Output Tape Records Produced per Minute</u>
Create Interview Data Tape (ME001).	100
Pool Answer Categories (ME005)	75
	<u>Minutes/Inquiry Element</u>
Analyze the Interview Data Tape (ME002)	2.0
Sort Analysis Tape.	0.3
Format and Print (ME004).	0.5

5.5      **PREPARATION OF INQUIRIES FOR INTERROGATION OF MASTER FILE OF  
INTERVIEW DATA MAINTAINED ON MAGNETIC TAPE**

Each inquiry submitted to the system must be entered on a punched card, which is used by the computer programs to select, from the Interview Data Tape, that data which requires further processing, formatting, and printing to satisfy the needs of the inquirer. Up to three inquiries may be punched into a single card, beginning at the left.

- (1)      **Specification of Interview Questions and Answers.** When specifying an interview question number, always use two digits. If necessary, fill in high-order zeros.

When specifying an interview answer for an intersection or combination inquiry, always right justify the specification in the four-character field provided. Specify the answer exactly as it was recorded on the Interview Guide. If the answer specification does not require four characters, leave the high-order positions blank in the four-character field.

- (2)      **Types of Inquiry Format.**

- (a)      **Simple frequency distribution**

To obtain the frequency of occurrence of each answer to a single specified interview question, specify a single interview question in the Interview Question Identification #3 field.

- (b)      **Two-level frequency distribution**

To obtain the frequency with which each answer to a specified question occurs in conjunction with each answer to another specified question on the same interview, specify the interview question whose answers are to be arrayed vertically down the left side of the matrix of the final printout, in the Interview Question Identification #2 field, and specify the interview question whose answers are to be arranged horizontally across the top of the matrix of the final printout in the Interview Question Identification #3 field.

- (c)      **Three-level frequency distribution**

To obtain the frequency with which each answer to one specified question occurs in conjunction with each answer to another specified question and in conjunction with each answer to a third specified question, specify the interview question, whose

answers are to be used to head each entire matrix of the final printout, in the Interview Question Identification #1 field.

The interview question specifications for the Interview Identification #2 and #3 fields are the same as for two-level frequency distributions discussed above.

(d) Intersection Inquiries

If both the total number of interviews and a list of the accession numbers of interviews meeting the specification are desired, enter a 3 in the Record Code field.

If only the total number of interviews is desired, enter a 2 in the Record Code field.

For any negative element of an intersection inquiry (logical negation) superimpose an 11-zone punch in the low-order position of the Interview Question Identification field.

For a single element intersection inquiry, specify the interview question in the Interview Question Identification #3 field and the interview answer in the Interview Answer #3 field.

For a two element intersection, specify interview questions in the Interview Question Identification #3 and #2 fields and corresponding interview answers in the Interview Answer #3 and #2 fields, respectively.

For a three element intersection, specify interview questions in the Interview Question Identification #3, #2, and #1 fields, and specify corresponding interview answers in the Interview Answer #3, #2, and #1 fields, respectively.

(e) Combination Inquiries

To obtain a simple frequency distribution of the answers to a specified interview question for all interviews which have specified answers to each of one or two questions, enter an asterisk, '\*', in the low order position of the Interview Answer #3 field and the interview question number of the question, whose answers are to be distributed, in the Interview Question Identification #3 field.

As in the intersection inquiry, for any negative element of the intersection portion of the combination inquiry (logical negation), superimpose an 11 zone punch in the low-order position of the Interview Question Identification field.

If a single element intersection is specified, specify the interview question in the Interview Question Identification #2 field, and specify the interview answer in the Interview Answer #2 field.

If the two element intersection is specified, specify interview questions in the Interview Question Identification #2 and #1 fields and specify the corresponding interview answers in the Interview Answer #2 and #1 fields, respectively.

5.6 SPECIFICATION OF TWO-LEVEL FREQUENCY DISTRIBUTION INQUIRIES FOR WHICH THE FREQUENCIES ARE TO BE LISTED IN DESCENDING SEQUENCE

The Inquiry Specification Card is used by the computer program to select data from the Sorted Interview Data Analysis Tape for formatting and printing. The data on this tape was placed there in response to various inquiries which were made against the Interview Data Tape (the master file of data obtained by interviewing the users of scientific and technical information).

Each Inquiry Specification Card identifies one inquiry for which data are to be formatted and printed, and also specifies which data are to be formatted and printed. (See Figure 5-2 for card format.) The number of Inquiry Specification Cards that may be entered in a single computer run is not limited by the program. The procedures for identifying an inquiry and specification of data to be formatted and printed are given below.

(1) Identification of Inquiry

- (a) Identify only inquiries requesting two level frequency distributions.
- (b) Punch the Interview Question Identification of the first question, specified in the inquiry, in the first field in the card for Interview Question Identification numbers.
- (c) Punch the Interview Question Identification of the second question, specified in the inquiry, in the second field in the card for Interview Question Identification numbers.

(2) Specification of Data to be Formatted and Printed

- (a) Cell frequencies in descending sequence
  - (i) Punch the minimum frequency of cells for which identifications and frequencies

are to be printed in the card field, Minimum Frequency Specification.

(ii) If this field is left blank, the program assumes a 1 has been entered.

(iii) To suppress printing of cell frequencies in descending sequence, punch a 9 in the first position of the field, Minimum Frequency Specification. This specification would be used if only cells with zero frequency were to be identified in the printed listing.

(b) Cells with zero frequency

(i) Punch a 1 in the Empty Cell Field if the identifications of cells with zero frequencies are to be printed.

(ii) Leave this field blank if identifications of cells with zero frequencies are not to be printed.

5.7 COMPUTER RUN TO CREATE OR MAINTAIN THE INTERVIEW DATA TAPE

This computer run creates or maintains the Interview Data Tape with data provided in the Interview Data cards. (See Figure 5-3 for general logic flowchart.)

(1) Input Data Description. In a file maintenance run, the interview Data Tape to be updated is input. For initial file creation, no input tape is required.

Interview Data cards are input for both file creation and file maintenance runs. If it is desired to delete all data for an entire interview from the Interview Data Tape, deletion cards may be used as input only for a file maintenance run. The formats of these cards follow (also see Figure 5-3):

Card Columns	Name of Field and Question Number for Analysis Purposes	Explanation and Question Number on Interview Guide
--------------	---	--

INTERVIEW DATA CARD NO. 1

1-4	Interview Accession Number	Always a four digit number stamped on the upper right hand corner of page one.

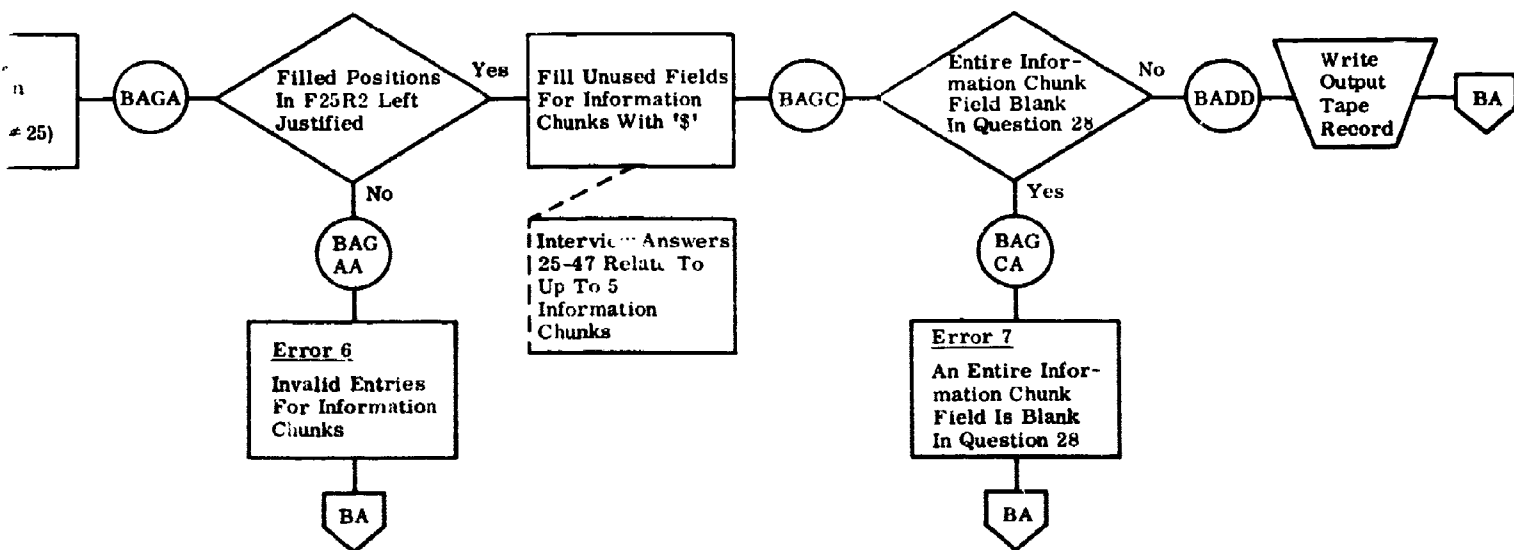

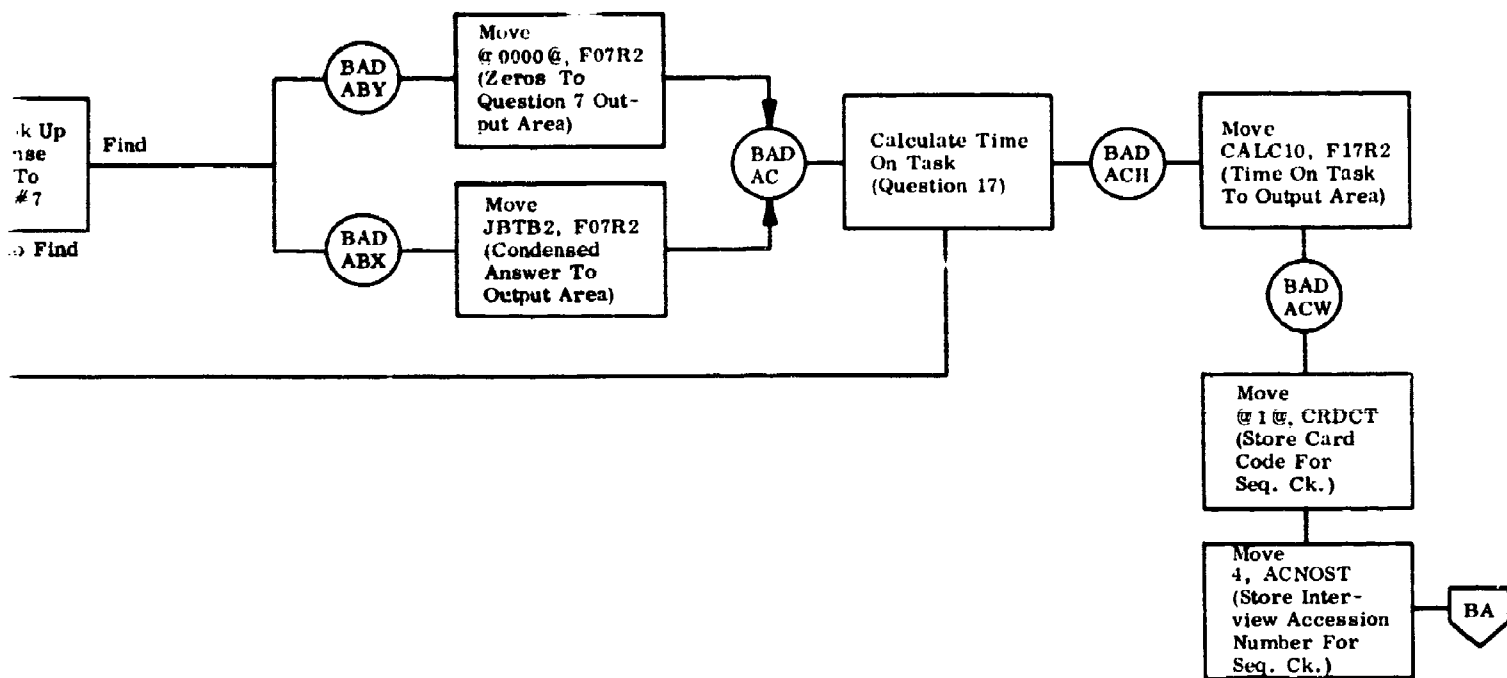

Figure 5-3. General Logic Flow Chart.  
Interview Data Tape — Creation and Maintenance (ME  
(Sheet 2 of 2)

Card Columns	Name of Field and Question Number for Analysis Purposes	Explanation and Question Number on Interview Guide
6-8	Question 98, Length of Interview	Always three digit numeric. This will be entered on the upper left of page one between time interview began and time interview ended.
9-12	Question 1, Military or GS Rating	Question 1, page one, always four alphanumeric characters.
13-14	Question 2, Year of Birth	Question 2, use only last two numeric digits of the year of birth.
15-16	Question 3, Number Supervised	Question 3, right justify and fill high-order zero. If three digits, punch 99.
17-19	Question 4, Highest Degree	Question 4, always three numeric.
20-21	Question 5, Year Obtained	Question 5, use only last two numeric digits of the year obtained. Leave blank if blank.
22-25	Question 7, MOS or Job Code	Question 7, always four numeric characters.
26-27	Question 8, Length of Time Doing This Type of Work	Question 8, always numeric, right justify and fill high-order zero.
28	Question 9, Type of Activity	Question 9, always one alpha character.
29	Question 10, Kind	Question 10, always one alpha character.
30-31	Question 11, Field	Question 11, always numeric, right justify and fill high-order zero.
32-33	Question 12, Field	Question 13, page 2, <u>FIRST BLOCK</u> always numeric, if one digit, right justify and fill high-order zero.
34-35	Question 13, Section	Question 13, <u>SECOND BLOCK</u> always numeric, if one digit, right justify and fill high-order zero.
<u>(Questions 12 &amp; 13 may be combined as Question 96 for purposes of analysis)</u>		
36	Question 14	Question 14, always one alpha character.
37	Question 15, Task Assigned	Question 15, always one alpha character, A or B.

Card Columns	Name of Field and Question Number for Analysis Purposes	Explanation and Question Number on Interview Guide
38	Question 16, Task Not Assigned	Question 16, always one alpha character, A, B, or C. If blank, leave blank.
39	Question 17	Question 17, <u>FIRST BLOCK</u> one numeric digit. If two digits, punch 9.
40		Question 17, <u>SECOND BLOCK</u> one alpha character.
41		Question 18, page 3, one alpha character.
42	Question 20, Task Output	Question 20, one alpha character, A, B, or C.
43	Question 21, Task Output	Question 21, one alpha character, A, B, or C.
44	Question 22, Task Output	Question 22, one alpha character, A or B.
45	Question 23, Task Output	Question 23, one alpha character, A or B.
46	Question 94	Question 94, one alpha character, or blank.
47	Question 93	Question 93, numeric character or blank.
48-67	Question 28	Question 28 includes five fields of four characters each. Each field may have up to four alphabetic characters or blanks.
68-77		Leave blank.
78	Card Code	Autoduplicate "1".
79-80	Project Code	Autoduplicate "ME".

#### INTERVIEW DATA CARD NO. 2

1-4	Interview Accession Number	Always a four digit number stamped on the upper right hand corner of page 5 of the Interview Guide.
-----	----------------------------	---

Card Columns	Name of Field and Question Number for Analysis Purposes	Explanation and Question Number on Interview Guide
5-9	Question 25, Five Classes	Question 25, page 5, leave blanks where they occur, <u>FIRST ROW of five boxes</u> , alpha only.
10-19	Question 26, Five Fields	Question 25, there are five, two-digit fields in the <u>SECOND ROW of five boxes</u> , right justify within each box, fill high-order zero, each box will contain no more than two numeric characters, <u>leave two blanks</u> when a box is completely blank.
20-29	Question 27, Five Sections	Question 25, there are five, two-digit fields in the <u>THIRD ROW of five boxes</u> , right justify and fill high-order zero within each box, each box will contain no more than two numeric characters, <u>leave two blanks</u> when a box is completely blank.
<u>(Questions 26 &amp; 27 may be combined as Question 97 for analysis purposes.)</u>		
30-34	Question 29, Habitual Media	Question 27, alpha only A, B, or C. When a blank is in the box, leave the card column blank.
35-39	Question 31	Question 29, page 6, alpha only, leave blanks where they occur.
40-44	Question 32	Question 30, alpha only, A, B, C, or D, leave blanks where they occur.
45-49	Question 33	Question 31, alpha only, A, B, or C, leave blanks where they occur.
50-54	Question 34	Question 32, page 7, alpha only, leave blanks where they occur.
55-59	Question 35	Question 33, alpha only, leave blanks where they occur.
60-64	Question 36	Question 34, alpha only, leave blanks where they occur.
65-77		Leave blank.
78	Card Code	Autoduplicate "2".
79-80	Project Code	Autoduplicate "ME".

<b>Card Columns</b>	<b>Name of Field and Question Number for Analysis Purposes</b>	<b>Explanation and Questions Number on Interview Guide</b>
-------------------------	--	--

**INTERVIEW DATA CARD NO. 3**

1-4	Interview Accession Number	Always a four digit number stamped on the upper right hand corner of page 7.
5-9	Question 37	Question 35, alpha only, A, B, or C, leave blanks where they occur.
10-14	Question 38	Question 36, alpha only, A, B, C, or D, leave blanks where they occur.
15-19	Question 39	Question 37, alpha only, A, B, or C, leave blanks where they occur.
20-24	Question 40	Question 38, alpha only, page 8, leave blanks where they occur.
25-29	Question 41	Question 39, alpha only, leave blanks where they occur.
30-34	Question 42	Question 40, alpha only, leave blanks where they occur.
35-39	Question 43	Question 41, alpha only, leave blanks where they occur.
40-44	Question 45	Question 43, page 9, alpha only, leave blanks where they occur.
45-49	Question 46	Question 44, page 9, alpha only, A or B, leave blanks where they occur.
50-54	Question 47	Question 45, page 10, alpha only, leave blanks where they occur.
55	Question 48	Question 46, A or B only.
56	Question 49	Question 1, page 11 (Part III) alpha only.
57	Question 50	Question 2, alpha only, leave blanks where they occur.
58	Question 51	Question 3, alpha only.
59	Question 52	Question 4, alpha only, leave blanks where they occur.

Card Columns	Name of Field and Question Number for Analysis Purposes	Explanation and Question Number on Interview Guide
60	Question 53	Question 5, alpha only.
61	Question 54	Question 6, alpha only
62	Question 56	Question 1, page 12 (Part IV) alpha only.
63	Question 59	Question 1, page 12 (Part V) alpha only.
64-66	Question 95	Question 95, numeric only, right justified, leave high order blanks.
67-77		Leave blank.
78	Card Code	Autoduplicate "3".
79-80	Project Code	Autoduplicate "ME".

#### DELETION CARD

1-4	Interview Accession Number	Punch the accession number of the interview to be deleted.
78	Card Code	Always "0" (zero).
79-80	Project Code	Always "ME".

#### (2) Output Data Description

The Interview Data Tape is the output (also see Figure 5-2):

<u>Positions</u>	<u>Name of Field</u>
1-45	Same as columns 1-45 of <u>Interview Data Card #1</u> , Paragraph 2. 2. Except columns 39-41 which indicate days on project on Interview Data Tape.
46-105	Same as columns 5-64 of <u>Interview Data Card #2</u> , Paragraph 2. 2.
106-167	Same as columns 5-66 of <u>Interview Data Card #3</u> , Paragraph 2. 2.
168-169	Same as columns 46-47 of <u>Interview Data Card #1</u> , Paragraph 2. 2.

<u>Positions</u>	<u>Name of Field</u>
170	Same as column 41 of <u>Interview Data Card #1</u> , Paragraph 2. 2.
171-190	Same as columns 48-67 of <u>Interview Data Card #1</u> , Paragraph 2. 2.
191-200	Blank.

(3) Operator Instructions

(a) Program Title and Number

INTERVIEW DATA TAPE-CREATION AND MTCE (ME001).

(b) Tapes

Input - Interview Data Tape on Tape Drive 2 (only for file maintenance, not for file creation).

Output - Interview Data Tape on Tape Drive 3.  
Unreadable record dump tape on Tape Drive 1.

(c) Cards - Input

(i) Date Card. The Date Card is placed before the object program deck before the EX Card (0102 in card columns 72-75).

(ii) RDLIN Card (Read Label Information). Do not use a RDLIN Card for an original file creation run.

For a file maintenance run, insert the RDLIN Card after the first EX Card (0102 in card columns 72-75) in the object program deck. The format of the RDLIN Card follows:

<u>Card Columns</u>	<u>Explanation and Description</u>
16-20	Always "RDLIN".
21-29	Always "00000-001" (numeric).
30	Leave blank.
31-40	Always "INTERDATAP".
41-45	Five digits (two for year, three for day) for date on which input tape was created.
46-49	Always "-021" (retention cycle).

- (iii) Interview Data Cards. These cards are stacked behind the object program deck and will fall into the normal stacker after they are read.

The card code is "ME" in card columns 79-80. The cards are sequenced as follows:

Major Field

Card columns 1-4          Interview Accession Number.

Minor Field

Card column 78          Card Code.

(d) Sense Switches

- (i) I/O, A, and B-ON, for initial file creation.
- (ii) I/O and A-ON, for file maintenance.

(4) Programmed Error Instructions

(a) Error 1 (ER01)

- (i) Printout: Input card in error.
- (ii) Condition: Card code (column 78) is something other than a 0 (zero), 1, 2, or 3, or project code (columns 79 and 80) is something other than 'ME'.
- (iii) Programmed action: None of the data from cards having the same interview accession number as the erroneous card are put on the output magnetic tape. The cards which have the same interview accession number and which also have a sequentially higher card code will appear as out-of-sequence, Error 3.
- (iv) Corrective action: Correct the card with the erroneous card code or project code and enter the corrected card with all other cards having the same interview accession number in a subsequent run.

(b) Error 2 (ER02)

- (i) Printout: The first 80 positions of the incomplete output record which could not be processed are printed.
- (ii) Condition: Less than three input cards all with the same interview accession number were entered.

- (ii) Programmed action: The incomplete output tape record is not processed to the output tape.
  - (iv) Corrective action: Enter in a subsequent run all three input cards for the interview, whose data were not processed.
- (c) Error 3 (ER03)
- (i) Printout: First line contains the four digit accession number either of the last processed interview data or of the interview data in process when the out-of-sequence card was read. Second line contains the contents of the out-of-sequence card.
  - (ii) Condition: Input cards entering the system are not in ascending sequence by interview accession number or within interview accession number (columns 1-4); the cards are not in unbroken sequence by card code (column 78).
  - (iii) Programmed action: Data from the out-of-sequence cards are not processed to the output tape.
  - (iv) Corrective action: Same as for Error 2.
- (d) Error 4 (ER04)
- (i) Printout: Contents of deletion card.
  - (ii) Condition: Record to be deleted from Interview Data Tape is not on the tape.
  - (iii) Programmed action: None.
  - (iv) Corrective action: Correct the interview accession number specified in the deletion card and enter the card in a subsequent run.
- (e) Error 5 (ER05)
- (i) Printout: Input card in error.
  - (ii) Condition: Invalid answer given for Interview Question #4, #7, or #17.
  - (iii) Programmed action: Data for the interview having the same interview accession number as the erroneous card is not processed to the output tape.

- (iv) Corrective action: Correct the erroneous card and enter in a subsequent run the three input cards for the interview whose data were not processed.
- (f) Error 6 (ER06)
  - (i) Printout: First 80 positions of the output record in error.
  - (ii) Condition: Answers to Question #25 are not packed to the left.
  - (iii) Programmed action: The output record is not processed to the output magnetic tape.
  - (iv) Corrective action: Pack to the left the answers to the Question #25 in the erroneous input card and enter in a subsequent run the three input cards for the interview whose data were not processed.
- (g) Error 7 (ER07)
  - (i) Printout: Same as for Error 6.
  - (ii) Condition: In Question #28, four blanks are in a field corresponding to one of the filled fields in Question #25.
  - (iii) Programmed action: Same as for Error 6.
  - (iv) Corrective action: In Question #28 in Interview Data Card #1, enter at least one alphabetic character in each four character field which corresponds to each filled field in Question #25. In a subsequent run, enter the three input cards for the interview whose data were not processed.

## 5.8 COMPUTER RUN TO ANALYZE THE DATA ON THE INTERVIEW DATA TAPE

This computer run analyzes the data on the Interview Data Tape according to the specifications contained in the inquiry cards. The program produces a record on the output tape to store the results of matching each inquiry against the data for each interview on the Interview Data Tape. See Figure 5-4 for general logic flowchart.

The program to analyze the Interview Data Tape can operate on the following types of inquiries:

- (1) Frequency Distribution Inquiries
  - (a) Simple frequency distribution. The frequency of occurrence of each answer to a single specified interview question can be obtained.

- (b) Two-level frequency distribution. The frequency with which each answer to one specified question occurs in conjunction with each answer to another specified question on the same interview can be obtained.
- (c) Three-level frequency distribution. The frequency with which each answer to one specified question occurs in conjunction with each answer to another specified question and in conjunction with each answer to a third specified question, can be obtained.

(2) Intersection Inquiries

The interview accession numbers can be obtained for each interview which has (or in the case of logical negation, does not have) the specified answers to each of one, two, or three specified questions. The total number of interviews meeting the specifications is given.

(3) Combination of Intersection and Frequency Distribution Inquiries

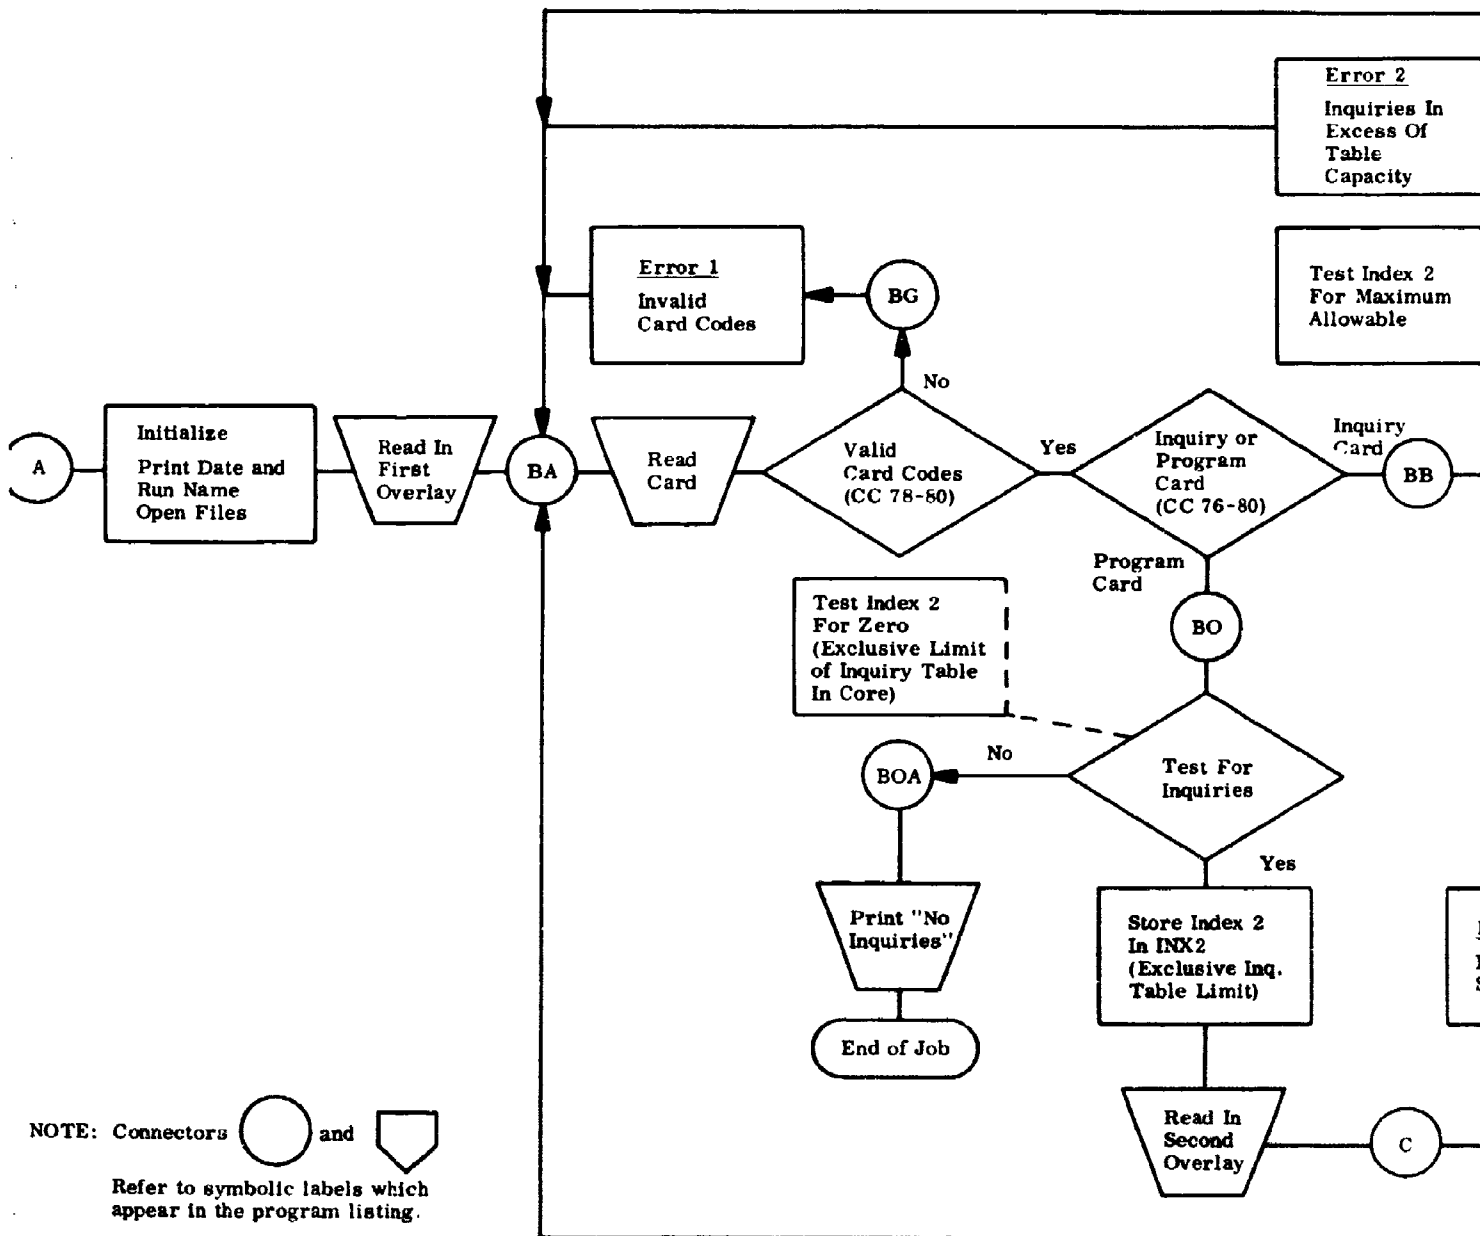

A simple frequency distribution of the answers to a specified interview question can be obtained for all interviews which have (or, in the case of logical negation, do not have) specified answers to each of one or two questions.

A special restriction exists for Questions #96 and #97, which are combinations of Questions #12 and #13, and Questions #26 and #27, respectively. These can only be specified in a simple frequency distribution inquiry.

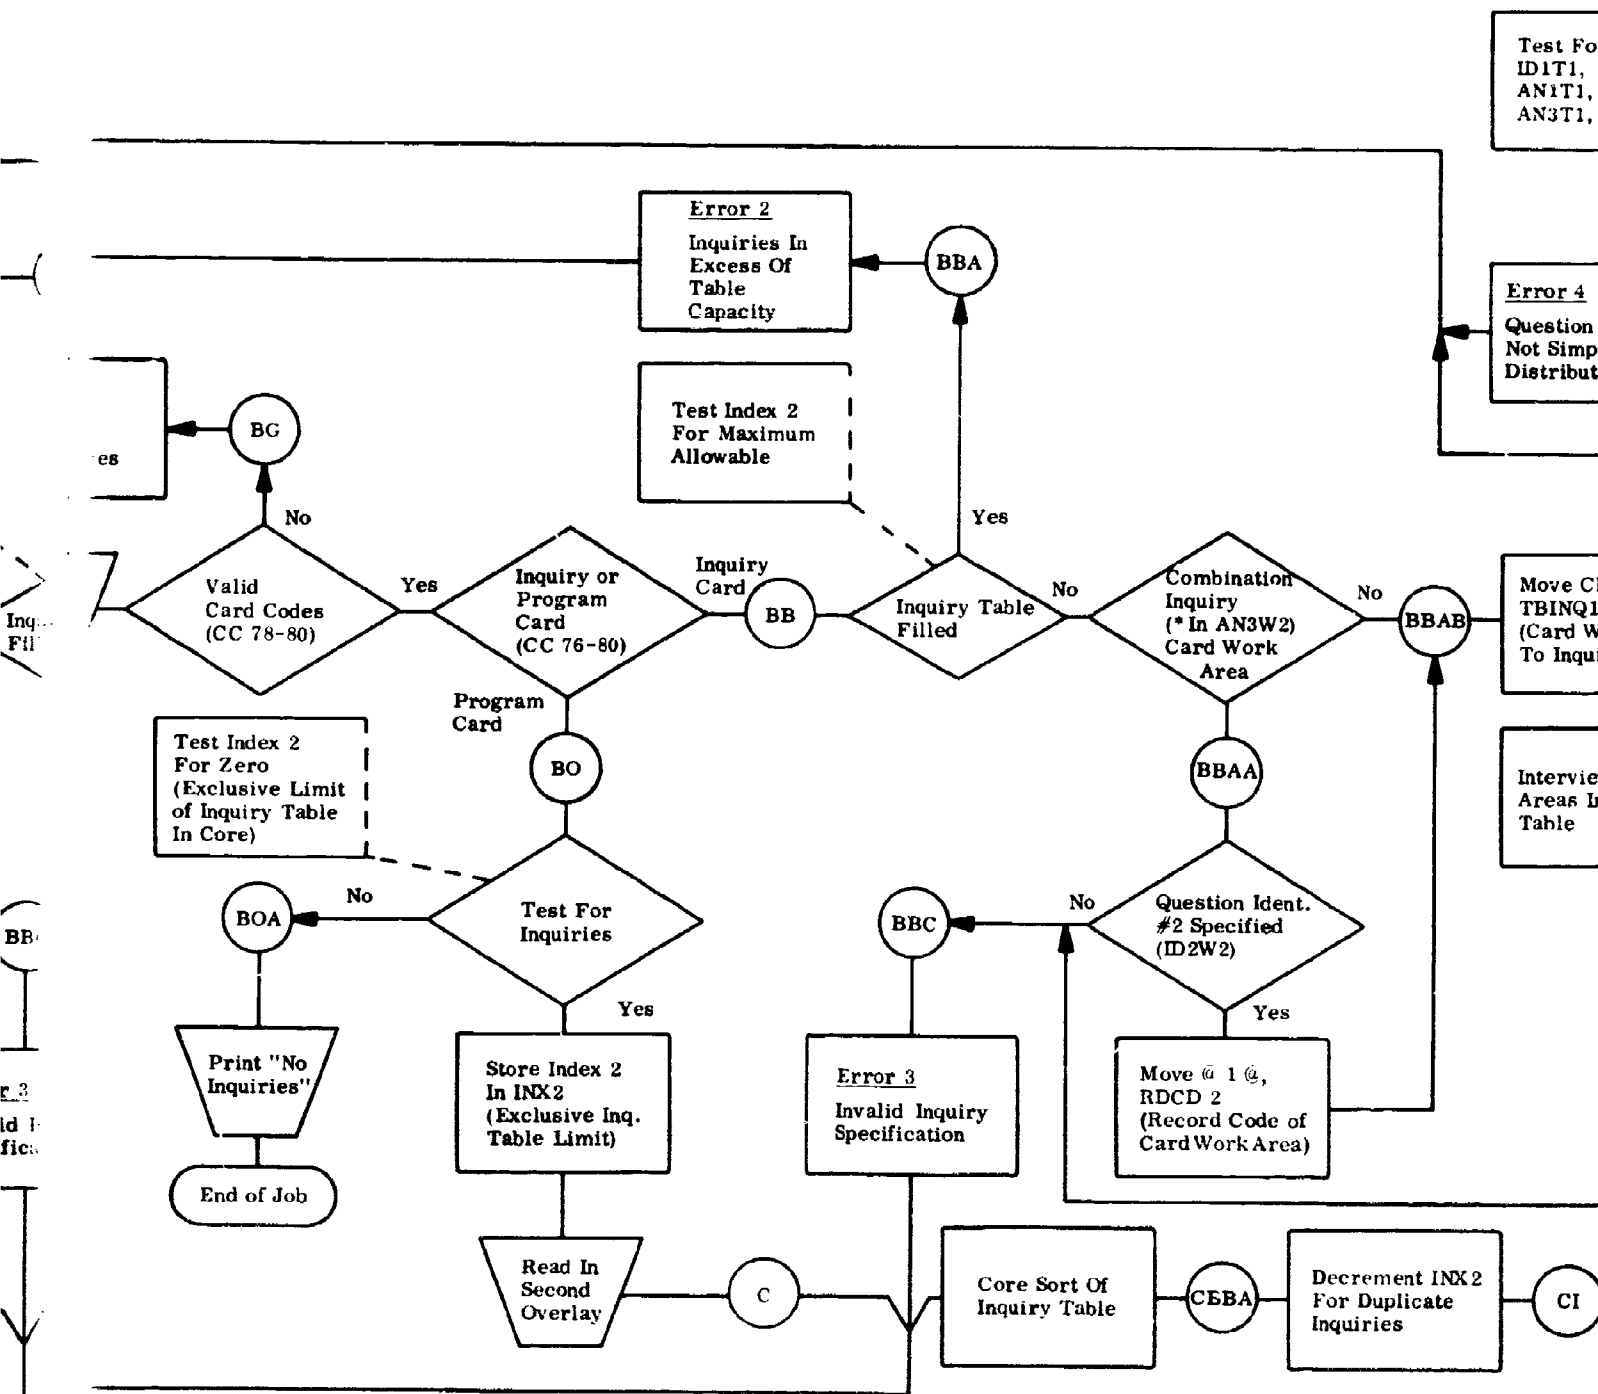

Up to 200 inquiries of any type can be accommodated in a single computer run but when a large number of inquiries is entered, the time of the runs should be considered for scheduling purposes.

(1) Input Data Description

- (a) Interview Data Tape. Format is given in Item (2) under Paragraph 5.6.
- (b) Inquiry Cards. Each card may accommodate up to three inquiries. When less than three inquiries are entered in a card, the inquiries must be packed to the left in the fields provided. These cards must be keypunched according to the following specifications (also see Figure 5-5).

Card Columns	Name of Field	Explanation
<u>1-19</u>	<u>Inquiry #1</u>	
1-2	Interview Question Identification #1	<p>Blank or filled with two numeric digits identifying an interview question if three are specified for a distribution, intersection, or combination inquiry.</p> <p>For a negative element of an intersection or combination inquiry, superimpose an 11-zone punch in column 2.</p> <p>Right justify and fill high-order zeros if not blank.</p>
3-6	Interview Answer #1	<p>For distribution inquiry, leave blank.</p> <p>For an intersection or combination inquiry, fill with the specified answer to the interview question, which is an element of the intersection.</p> <p>Right justify and punch only valid answers requiring up to four characters, leave high-order positions blank when valid answer is less than four characters.</p>
7-8	Interview Question Identification #2	<p>Blank or filled with two numeric digits identifying an interview question if at least two are specified for a distribution, intersection, or combination inquiry.</p> <p>For a negative element of an intersection or combination inquiry, superimpose an 11-zone punch in column 8.</p> <p>Right justify and fill high-order positions with zeros if not blank.</p>
9-12	Interview Answer #2	Same as for columns 3-6 above.
13-14	Interview Question Identification #3	<p>Filled with two numeric digits identifying an interview question specified for any distribution, intersection, or combination inquiry.</p> <p>For a negative element of an intersection inquiry, superimpose an 11-zone punch in column 14.</p>

Card Columns	Name of Field	Explanation
15-18	Interview Answer #3	For distribution inquiry, leave blank.  For intersection inquiry, fill with the specified answer to the interview question, which is an element of the intersection.  Right justify and punch only valid answers requiring up to four characters, leaving high-order positions blank when valid answer is less than four characters.  For combination, punch an asterisk (*) in the low order position and leave three high-order positions blank.
19	Record Code	For distribution inquiry, leave blank.  For intersection inquiry, punch a 2 if only the total number of interviews meeting the specification is required.  Punch a 3 if both a listing of the accession numbers and the total number of interviews meeting the specification are required.
20-21		Always blank.
<u>22-40</u>	<u>Inquiry #2</u>	
22-23	Interview Question Identification #1	Same as for columns 1-2.
24-27	Interview Answer #1	Same as for columns 3-6.
28-29	Interview Question Identification #2	Same as for columns 7-8.
30-33	Interview Answer #2	Same as for columns 9-12.
34-35	Interview Question Identification #3	Same as for columns 13-14.
36-39	Interview Answer #3	Same as for columns 15-18.
40	Record Code	Same as for column 19.
41-42		Always blank.
<u>43-61</u>	<u>Inquiry #3</u>	
43-44	Interview Question Identification #1	Same as for columns 1-2.

Card Columns	Name of Field	Explanation
45-48	Interview Answer #1	Same as for columns 3-6.
49-50	Interview Question Identification #2	Same as for columns 7-8.
51-54	Interview Answer #2	Same as for columns 9-12.
55-56	Interview Question Identification #3	Same as for columns 13-14.
57-60	Interview Answer #3	Same as for columns 15-18.
61	Record Code	Same as for column 19.
62-77		Always blank.
78	Card Code	Autoduplicate "4".
79-80	Project Code	Autoduplicate "ME".

(2) Output Data Description

The Interview Data Analysis Tape is the output. The format follows (also see Figure 5-4):

Positions	Name of Field	Explanation
1	Record Code	Blank for distribution inquiries.  1 - For combination inquiries.  2 - For intersection inquiries for which only the frequency of responses is to be printed.  3 - For intersection inquiries for which both the interview accession number of each response and the frequency of responses are to be printed.
2-3	Interview Question Identification #1	Blank or two numeric characters, right justified with high-order positions filled with zeros.
4-5	Interview Question Identification #2	Same as above.
6-7	Interview Question Identification #3	Same as above.

<u>Positions</u>	<u>Name of Field</u>	<u>Explanation</u>
8-11	Interview Answer #1	Blank for inquiry with less than three elements.  For a distribution inquiry, this field contains the actual answer to the specified interview question found in the interview identified by the accession number in positions 20-23.  For an intersection or combination inquiry, this field contains the specified answer to the specified interview question.
12-15	Interview Answer #2	Same as above.
16-19	Interview Answer #3	Same as above, except that for combination inquiries, this field contains the actual answer to the specified interview question found in the interview identified by the accession number in positions 20-23.
20-23	Interview Accession Number	A four digit number identifying the interview providing a response to an inquiry.
24	Record Mark	

(3) Operator Instructions

(a) Program Title and Number

INTERVIEW DATA TAPE - ANALYSIS, ME002

(b) Tapes

(i) Input - Interview Data Tape on Tape Drive 2.

(ii) Output - Interview Data Analysis Tape on Tape Drive  
Unreadable record dump tape on Tape Drive

In the event that more than one tape reel is required for output, the IOCS automatically rewinds and unloads the completed reel. The operator merely loads another reel and presses start to continue. Since these tapes are to be sorted in the next run, keeping them in proper sequence is not important.

(c) Cards - Input

- (i) Date Card. Insert the Date Card in the object program deck before the first EX Card (0144 in card columns 72-75).
- (ii) RDLIN Card (Read Label Information). Insert a RDLIN Card after the first EX Card (0144 in card columns 72-75) in the object program deck. This card is exactly the same as the one used for the computer run to create or maintain the Interview Data Tape.
- (iii) Inquiry Cards. The Inquiry Cards are inserted immediately after the EX Card at the end of the first overlay (approximately 0177 in card columns 72-75) in the object program deck.

These cards will fall into the normal stacker after they are read. They are in random sequence and are identified by a card code of '4' in column 78 and a project code of 'ME' in columns 79-80.

(d) Sense Switches

I/O and A-ON.

(4) Programmed Error Instructions

(a) Error 1 (ER01)

- (i) Printout: Contents of input card in error.
- (ii) Condition: Something other than '4ME' in card columns 78-80.
- (iii) Programmed action: The erroneous card is not processed and the next card is read.
- (iv) Corrective action: Enter any non-processed inquiries in a subsequent run with a correct Inquiry Card.

(b) Error 2 (ER02)

- (i) Printout: Contents of input card in error with the particular erroneous inquiry on the card identified by position as '1ST,' '2ND,' or '3RD'.
- (ii) Condition: There are more than 200 inquiries being entered in the same run.
- (iii) Programmed action: The excess inquiries are not processed.

- (iv) Corrective action: Enter the non-processed inquiries in a subsequent run.

(c) Error 3 (ER03)

- (i) Printout: Same as for Error 2.
- (ii) Condition: Either a distribution inquiry has some characters in a field reserved for interview answers, or an intersection inquiry has some record code other than 2 or 3, or a combination inquiry does not have at least one specified question and answer.
- (iii) Programmed action: The erroneous inquiry is not processed.
- (iv) Corrective action: Correct the inquiry and enter the new Inquiry Card in a subsequent run.

(d) Error 4 (ER04)

- (i) Printout: Same as for Error 2.
- (ii) Condition: Interview Question #96 or 97 has been specified in an inquiry of a type other than a simple frequency distribution.
- (iii) Programmed action: The erroneous inquiry is not processed.
- (iv) Corrective action: Correct the inquiry and enter the new Inquiry Card in a subsequent run.

(e) Error 5 (ER05)

- (i) Printout: Contents of erroneous unit in inquiry table stored in core memory. Each inquiry entered in a run is stored in a single unit of this table.

The format of each unit of the inquiry table is the following (also see Figure 5-5):

<u>Positions</u>	<u>Name of Field</u>
1	Record Code
2-3	Interview Question Identification #1
5-6	Interview Question Identification #2
6-7	Interview Question Identification #3

<u>Positions</u>	<u>Name of Field</u>
8-11	Interview Answer #1
12-15	Interview Answer #2
16-19	Interview Answer #3
20-22	Tags for internal computer processing
(ii)	<u>Condition:</u> Invalid Interview Question Identification.
(iii)	<u>Programmed action:</u> The inquiry containing the invalid Interview Question Identification is not processed.
(iv)	<u>Corrective action:</u> Consult procedures in Paragraph 5.6, Item (1) for a list of valid interview question identification numbers. Consult procedures in Paragraph 5.7 for specifications of Inquiry Card. Correct the inquiry and enter the new Inquiry Card in a subsequent run.
(f)	<u>Error 6 (ER06)</u>
(i)	<u>Printout:</u> Contents of erroneous unit in inquiry table stored in core memory. Each inquiry entered in a run is stored in a single unit of this table. Also printed out on the same line is the incorrect answer specification.
(ii)	<u>Condition:</u> In an intersection inquiry in which is specified an interview question having several ranges of possible answers in contrast to discrete answers, an upper range boundary has not been specified.
(iii)	<u>Programmed action:</u> The erroneous inquiry is not processed.
(iv)	<u>Corrective action:</u> Enter in a subsequent run an inquiry in which only upper range boundaries are specified for answers to interview questions which have several ranges of valid answers. Such questions and the upper range boundaries of their valid answers appear below.

## 5.9 COMPUTER RUN TO SORT ANALYSIS TAPE

The purpose of this run is to sort the individual records on the Interview Data Analysis Tape so that their frequency by various control fields can be determined.

### (1) Sort Specification

#### (a) Major to Minor Fields

<u>Field Name</u>	<u>Tape Record Positions</u>
Record Code	1
Interview Question Identification #1	2-3
Interview Question Identification #2	4-5
Interview Question Identification #3	6-7
Interview Answer #1	8-11
Interview Answer #2	12-15
Interview Answer #3	16-19

#### (b) Tape Header and Trailer Labels. None.

#### (c) Record and Block Size.

- (i) Records. 24 characters including record mark.
- (ii) Blocks. Fixed length, 80 records per block, last block padded with 0's, if necessary, to make an 80 record block.

## 5.10 COMPUTER RUN TO FORMAT ANALYZED INTERVIEW DATA AND TO PRINT

This computer run calculates from the sorted Interview Data Analysis Tape the frequencies and totals required by the inquiries. For distribution and combination inquiries, these frequencies are formatted in matrices, row and column percents are calculated, and row and column totals are calculated. For intersection inquiries, the responsive interview accession numbers, if required, and the total count of accession numbers are simply formatted across one line after another. As the response to each inquiry is formatted, its identification and the responses in required form are printed out. See Figure 5-6 for general logic flowchart.

- (1) Input Data Description. The Sorted Interview Data Analysis Tape is the input.

If the input file is contained on more than one reel, the operator must keep the reels in the sequence that they were produced by the sort. He must also turn Sense Switch G On until the next to last reel has been completed. At the end of each reel the program unloads the completed reel and halts if Sense Switch G is On. This allows the operator to change to the next input reel. He then readies the next input reel and presses start to continue. Before starting the final reel, the operator must turn Switch G Off.

- (2) Output Data Description. The output is the printed listing on continuous form paper in the following format.

(a) Inquiry Identification

- (i) Frequency Distribution Inquiries. X, Y, and Z, appearing below, indicate fields for each specified Interview Question Identification Number.

Simple

Print positions 1-14.  
"DISTRIBUTE XX."

Two-level frequency distribution

Print positions 1-25.  
"WITHIN YY, DISTRIBUTE XX."

Three-level frequency distribution

Print positions 1-32.  
"WITHIN ZZ, DISTRIBUTE YY AND XX."

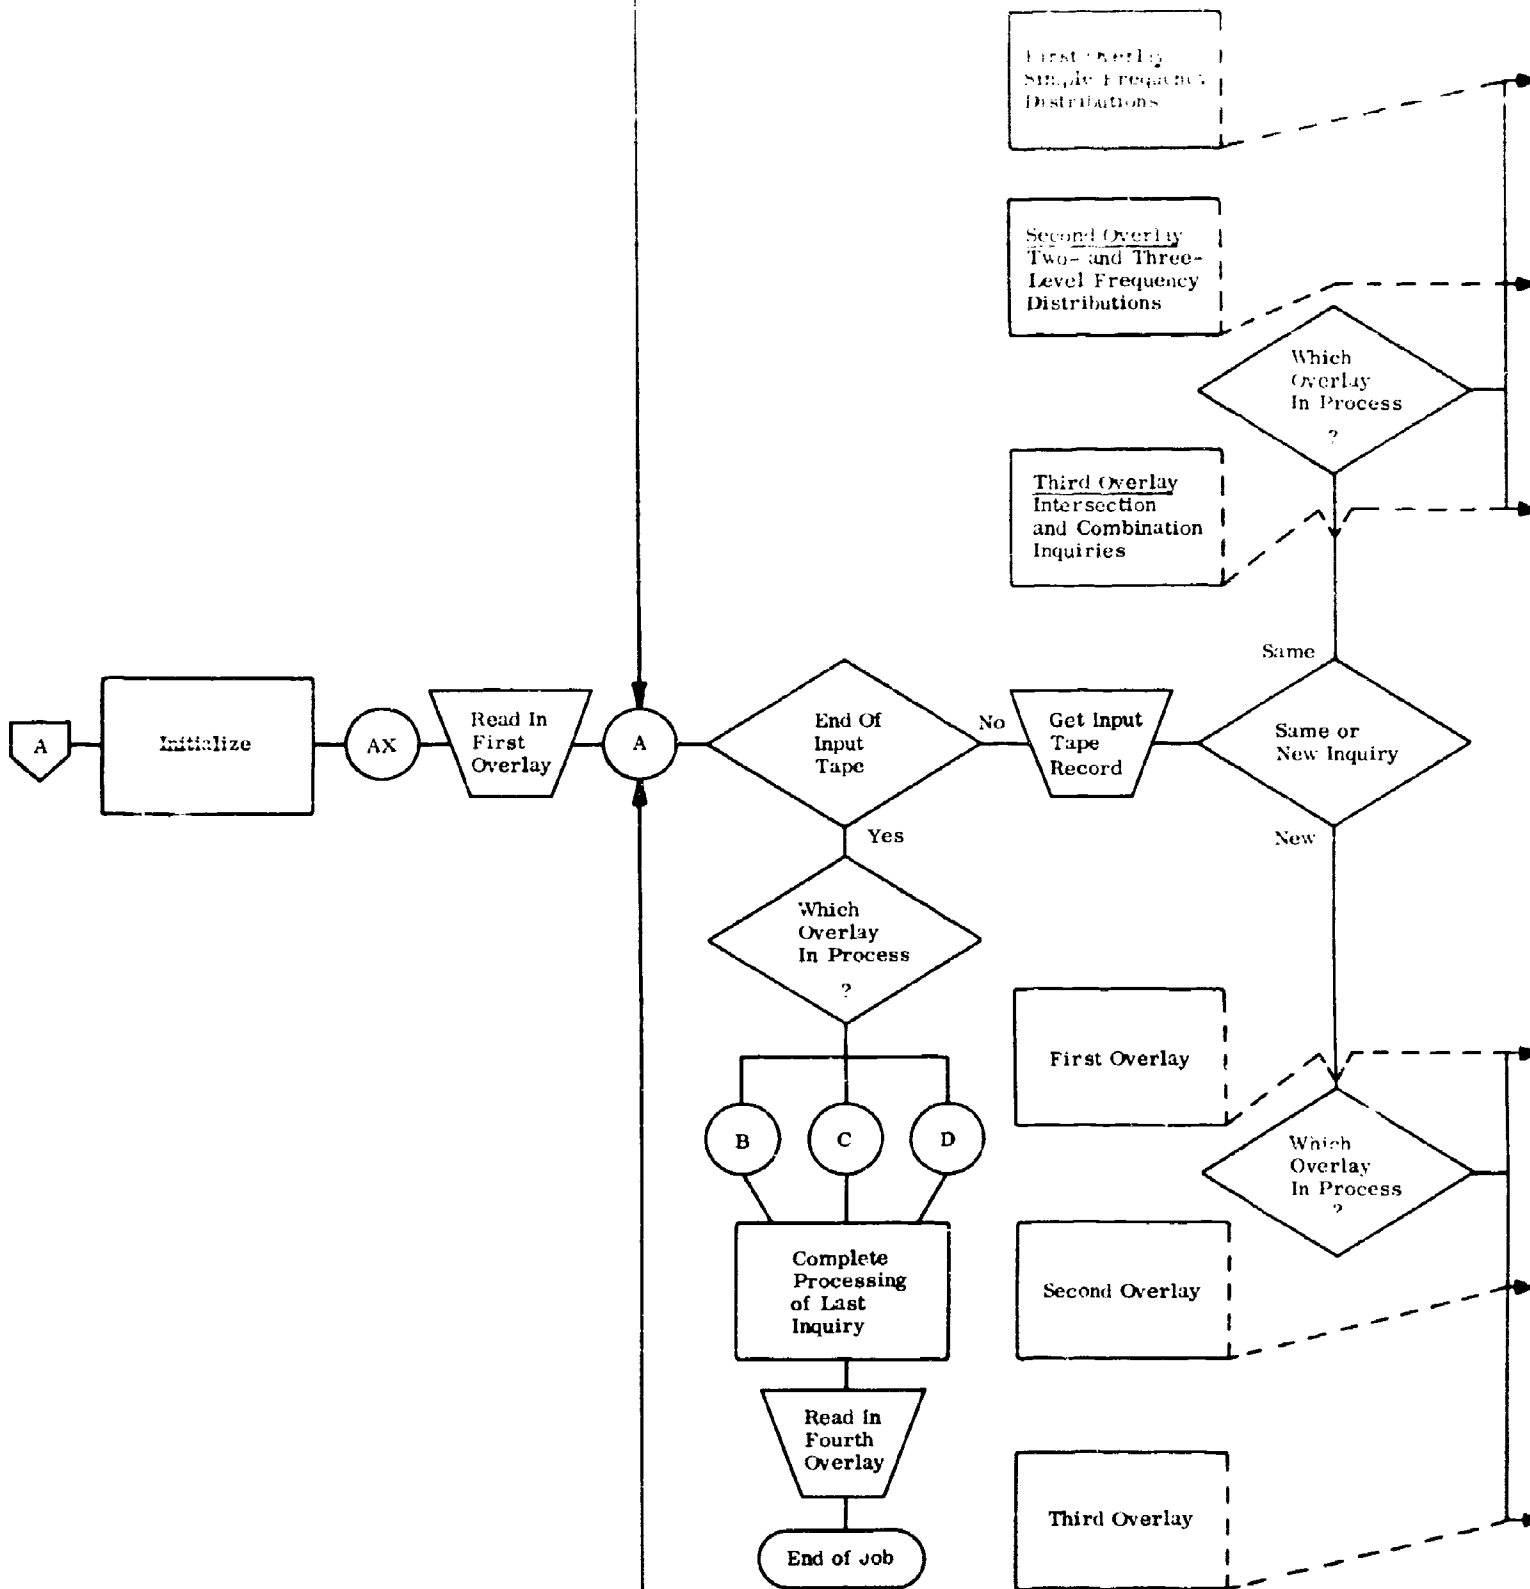

- (ii) Intersection Inquiries

For a negative element in an Intersection Inquiry, the word "NOT" is substituted for the word "ANSWER" in all of the following headings.

X, Y, and Z, appearing below, indicate fields for each specified Interview Question Identification Number and I, J, and K indicate fields for each specified Interview Answer.

Single element

Print positions 1-39.  
"INTERSECTION--QUESTION XX, ANSWER III."

NOTE: Connectors  and  Refer to symbolic labels which appear in the program listing.
